Manufacturer of stormwater capture products
Member since February 2017

Management and Leadership

☑ **Environmentally Preferable Products and Services**

PaverGuide is a stormwater capture system used to replace stone as a base below permeable pavements. The PaverGuide filtering media can be used as a structural sub base below PaverGuide and in other BMP's. The media removes phosphorous, nitrogen, copper, lead, and zinc from stormwater.

☑ **Environmentally Preferable Purchasing**

PaverGuide grates and grids are made from 100% recycled plastic and the PaverGuide media contains material typically sent to a landfill.

Waste

☑ **Recycling**

All materials the recycler will process including paper, plastic, steel, aluminum, and cardboard.

Energy

☑ **Energy Efficiency**

We replaced windows and doors and installed new insulation throughout the facility.

Transportation

☑ **Employee Commute**

Work from home office.

Water

☑ **Stormwater Management and Site Design**

We removed 3,200 square feet of impermeable concrete in the driveway, sidewalk, and patio and replaced it with a PaverGuide stormwater capture system and permeable pavers.

Other

☑ *PaverGuide, Inc. is receiving funds from the Chesapeake Bay Seed Capital Fund.*
