

Maryland Green Registry MEMBER

The Maryland Green Registry promotes and recognizes sustainable practices at organizations of all types and sizes. Members agree to share at least five environmental practices and one measurable result while striving to continually improve their environmental performance.

Environmental Team

The members of the management team also comprise the Environmental Team. We discuss issues relating to reducing our environmental impact. In addition, our Chief Executive meets regularly with environmental management firms to stay abreast of best practices.

Environmentally Preferable Products and Services

BridgePath Scientific refurbishes and extends the life of lab equipment that might otherwise be disposed. We also reuse packaging materials from equipment that is sent to us.

Waste

Solid Waste Reduction and Reuse

In addition to reusing packaging materials, we rebuild pallets when possible. In general, we save money by not purchasing many packing materials and use items that may typically be thrown away in daily trash.

Recycling

We recycle general office waste, such as printer cartridges, paper, plastics, and metals. In addition, we recycle hundreds of pounds of metals, plastics and glass from end-of-life laboratory equipment. This is, in our opinion, the practice with the largest environmental impact. In October 2010 we recycled 896 pounds, in November 2010 we recycled 800 pounds, and in December 2010 we recycled 400 pounds. We average 700 pounds a month in recycled equipment that would otherwise end up in landfills. We continue to recycle hundreds of pounds of materials monthly.

Hazardous Waste/Toxic Use Reduction

We use environmentally friendly cleaners for our equipment refurbishment processes. We do not see a great cost savings; however we do not expose our staff to potentially dangerous substances.

Transportation

Efficient Business Travel

We needed a large vehicle for equipment and personnel transportation needs so we consulted with an expert and learned that the best practice was to purchase a used vehicle, use fuel efficient tires, and perform our own maintenance on the vehicle, including recycling of oils, etc.

Profile Updated February 2015

Help build a greener, more sustainable Maryland through voluntary practices that reduce environmental impacts and save money.
