MANAGEMENT AND LEADERSHIP

Environmentally Preferable Products and Services

Select Energy Solutions assists facility owners in reducing energy consumption. We specialize in all forms of energy consumption reduction: electricity, natural gas and water. Select provides products and services to support the EmPower Maryland Act to reduce energy consumption 15% by 2015. We are also able to help organizations achieve certifications of national recognition, such as LEED Certification and Energy Star Certification.

Environmental Restoration or Community Environmental Projects

Select has an official partnership with Long Reach High School of the Howard County Public School System. During this partnership we have provided the following services free of charge to Long Reach: Energy/Load Analysis, Power Quality Analysis, Infrared Analysis, Water conservation evaluation, Project Recommendations for lighting, information on utility rebates, student learning projects and more.

In honor of the Martin Luther King Jr. Day of Service, Select performed a free energy audit for the following facilities located in the Park Heights neighborhood: St Johns Church, The Church of the Holy Nativity and the Hope House. This audit helped to identify energy savings opportunities for these non-profit organizations.

WASTE

Solid Waste Reduction and Reuse

We reduce paper waste by utilizing duplex printing and practicing re-use of printed materials.

ENERGY

Energy Efficiency

Our offices utilize programmable thermostats, CFL bulbs, and daylight harvesting when applicable. We also use multi-function technology (all-in-one copier/fax/printer/scanner) to reduce electricity load. Computers, printers and other office machinery are turned off at the close of each business day.

TRANSPORTATION

Efficient Business Travel

We encourage and practice ridesharing to meetings and our employees are offered incentives for reimbursement of public transportation when traveling.

Select also utilizes and promotes web and teleconferencing resources for meetings. We hold at least four teleconference meetings per month with a partner firm in Virginia. By reducing vehicle travel, we have eliminated nearly 3,500 lbs of CO₂ emissions per year.
