GROUND WATER RULE MONITORING REPORT FORM (Ground Water Systems Only)

Beginning December 2009, one raw water sample (*Triggered Source Water Sample*) must be collected from each active ground water source each time a routine total coliform sample (TCR) tests positive for total coliform. This report must be received by the 10th day of each succeeding month in which samples were collected, and should accompany the Bacteriological Monitoring Report Form.

GENERAL INFORMATION:

System Name _____ PWSID -

Name of Laboratory _____ Lab ID# _____

Sampler(s) _____ Sampler ID -
-

OCCURENCE INFORMATION:

Date of original positive TCR sample _____

Sample location of positive sample _____

Number of ground water sources being used when the positive sample was taken* _____

* Water systems with State-approved representative monitoring and/or triggered source water monitoring plans should only list the number of applicable sources.

List source numbers and names of active sources (Ex. 01 Primary Well)

GWR Requirements:

- The "Initial Triggered Source Water Sample" must be collected within 24 hr of notification of the routine TCR positive sample, or as approved by MDE.
- If the "Initial Triggered Source Water Sample" is fecal indicator-positive, the water system must
 - provide a Tier 1 public notice to customers within 24 hr of being notified the Triggered Source Water Sample was positive.
 - collect 5 additional "Repeat Triggered Source Water Samples" from each of the sources that the "Initial Triggered Source Water Sample" was fecal indicator-positive. These repeat samples must be collected within 24 of being notified of the positive "Initial Triggered Source Water Sample".
(Repeat samples are not required if MDE has already required the water system to take corrective action prior to the 24 hr deadline)
- MDE must be notified within 24 hr whenever there is a fecal indicator-positive Source Water Sample.
