

Memorandum

TO: Andrew Grenzer *AG*
FROM: Brenda Keister *BK*
DATE: April 14, 2020
RE: **AI-Ray (Sands Road) Rubble Landfill (2019-414)**

Maryland
Department of
the Environment

This memo is in reference to the **2019 Second Semi-Annual Groundwater Monitoring Report** for Sands Road Landfill, located in Anne Arundel County. The report was prepared by Maryland Environmental Service (MES) and was received by MDE on December 27, 2019. The rubble landfill operated from 1984 until April 1994 when it ceased accepting waste and was capped in December 1994. It is approximately 180 acres, unlined, and does not have a leachate collection system.

SITE MONITORING PLAN

The groundwater monitoring program for the landfill consists of six monitoring wells: MW-6, MW-7, MW-8, MW-9, MW-10 and MW-11. MW-6 serves as the upgradient well for the site. The landfill has a gas monitoring network of seven gas probes: GP-1 through GP-7. This groundwater monitoring event was conducted in August 2019.

VOLATILE ORGANIC COMPOUNDS (VOCs)

Low level VOCs were detected this event. Trace chlorobenzene was detected in MW-6 and MW-11. MTBE was detected in wells MW-6, MW-7, and MW-10. Sporadic low level MTBE detections are consistent with historical data. Surface location SW-3 detected acetone though acetone was not found in any well. Carbon disulfide and chloromethane were detected in the rinsate blanks.

METALS & GENERAL CHEMISTRY

Arsenic was over the MCL in MW-7 (57 ug/L). This exceedance is consistent with historical data. The most upstream surface water location, SW-1 was over the ambient human health consumption standard (0.18 ug/L) at 1.1 ug/L. This concentration was below the ambient aquatic life standard (150 ug/L).

STATISTICAL SIGNIFICANT INCREASES (SSIs)

The downgradient monitoring wells: MW-7, MW-8, MW-9, MW-10 and MW-11, were compared to the background monitoring well MW-6 for SSIs. MW-7 had SSIs for alkalinity, iron, arsenic, chromium, and vanadium. MW-9 reported SSIs for nickel, potassium, and sulfate. MW-10 returned SSIs for alkalinity, chloride, and sulfate. MW-11 had SSIs for alkalinity, iron, nickel, potassium, and sulfate. No trend was indicated

for the arsenic in MW-7 using intra-well analysis. Surface water location SW-2 is in the vicinity of MW-7 and was below the ambient standard.

LANDFILL GAS

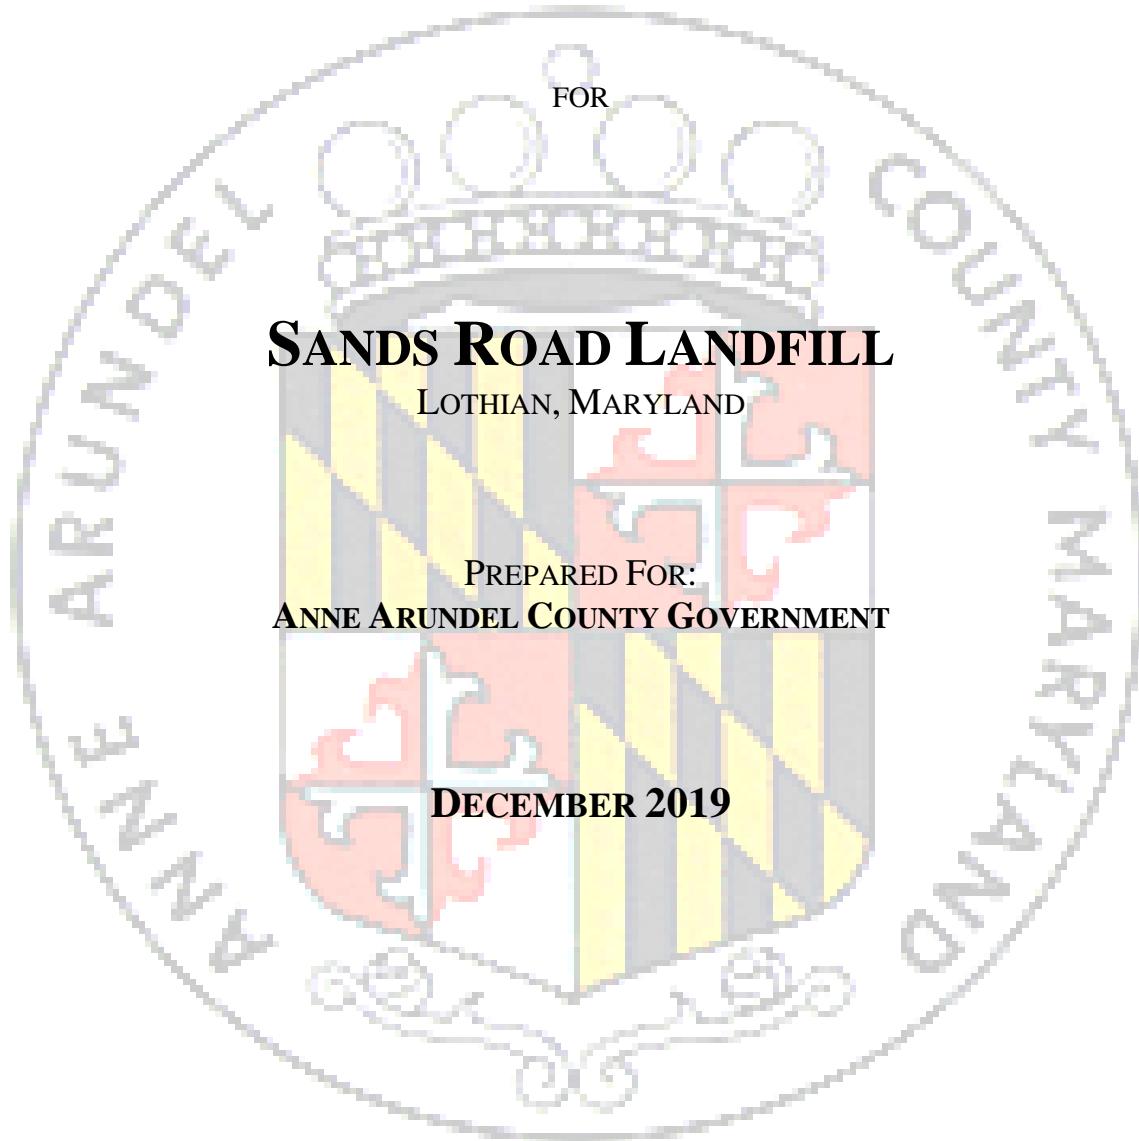

Quarterly gas monitoring was conducted on August 8 and October 21, 2019 from seven gas probes. LFG probes GP-3, GP-4, GP-5, GP-6 and GP-7 are constructed as multiple depth monitoring probes, so gas is sampled at 12 locations. Methane was below the LEL during the two quarters.

The post-closure site inspection was conducted on August 8, 2019. Matters of routine maintenance were recommended to the County. The County has an ongoing issue with the trespass of ATVs, but has indicated that to completely barrier the site from such activity is cost prohibitive. They continue to post signs and replace gate locks as necessary at the site.

Anne Arundel County should continue with the semiannual groundwater and quarterly gas monitoring. Any questions concerning this matter may be directed to me at Ext. 3331.

Sands Road Landfill
Anne Arundel County, MD
2019 Second Semi-Annual Environmental Monitoring Report

1.0 INTRODUCTION

This Semi-Annual Monitoring Report covers the July 1, 2019 through December 31, 2019 monitoring period at the Sands Road Landfill in Anne Arundel County, Maryland. The United States Environmental Protection Agency (USEPA) National Primary Drinking Water Standards Maximum Contaminant Levels (MCLs) provide numerical cleanup standards for hazardous substances in groundwater as is stipulated in COMAR 26.04.07. Therefore, groundwater monitoring data collected at the Sands Road Landfill was compared to those levels as stipulated by the Maryland Department of Environment (MDE) and the Environmental Monitoring Plan for the Site. This work was completed in accordance with the facility's groundwater discharge permit (# 2014-GWD-2130). The Code of Maryland Regulations (COMAR) 26.08.02.03-2 Drinking Water and Organisms specifies Numerical Criteria for Toxic Substances (NCTS) in surface water. Surface water monitoring data collected at Sands Road Landfill was compared to the NCTS.

1.1 General Site Conditions

The closed rubble landfill at Sands Road Park is comprised of approximately 180 acres and is located at 4910 Sands Road in Lothian, Anne Arundel County, Maryland. The property is currently owned by the Anne Arundel County Government and is maintained by the County Department of Recreation and Parks. The Anne Arundel County Government acquired the site, including the closed rubble landfill in December 2003.

The closed rubble landfill at Sands Road Park was permitted and operated as a construction and demolition debris landfill from 1984 until 1994 by the Al-Ray Super Concrete Corporation. Construction materials, white-goods, tree stumps, and other land clearing debris were accepted at the site in accordance with the operating permit. According to the former owner/operator, no hazardous waste, household waste, or liquid wastes were disposed of at the landfill. It should be noted that this landfill is not lined and does not have a leachate collection system.

In April 1994, the landfill ceased accepting waste, and was capped in December 1994. Two feet of soil were placed on top of the compacted debris, followed by a synthetic membrane. Six inches of sand and two feet of soil were then placed over the synthetic membrane. Thus, there are 30 inches of cover material above the membrane and 24 inches of cover beneath the membrane. The synthetic membrane was not placed over areas where the slope was too steep for placement. The MDE approved a variance to use

soil cover only on the steep slopes. A coarse sand layer and an additional four feet of soil were compacted above the membrane and the site was vegetated using shallow rooting materials.

1.2 Site Geology

1.1.1 Regional Geologic Setting

The site is located within the Coastal Plain Physiographic Province of Maryland. The landfill overlies the following geologic formations, listed here in order of approximate depth below ground surface, Quaternary Lowland Deposits, the Calvert Formation, the Nanjemoy Formation, the Marlboro Clay, and the Aquia Formation. Below is a description of each strata and its relationship to the site (Marshall, 1982).

- The Lowland Deposits consist of gravel, sand, silts, and clays. The sands and gravels tend to be medium to coarse-grained. Cobbles and boulders are located near the base. Layers and seams of clay exist at various locations and depths; however, they are limited in both lateral and vertical extent. This deposit was mined prior to the construction of the landfill and is therefore not present at most locations. On the eastern side of the site, the thickness of this stratum was found to vary from about 10 to 40 feet.
- The Calvert Formation consists of olive green to olive brown fine-grained silty to clayey sand and silt. The thickness of the Calvert Formation in the vicinity of the site is approximately 40 feet.
- The Nanjemoy Formation is part of the Pamunkey Group and consists of dark green to gray, argillaceous, glauconitic, fine to medium-grained sand and minor gray to pale brown clay. This formation is approximately 80 feet thick.
- The Marlboro Clay Member consists of pink to gray homogenous plastic clay with local lenses of very fine-grained white sand. This formation is approximately 30 feet thick.
- The Aquia Formation consists of dark green to gray-green argillaceous, highly glauconitic, well sorted fine to medium-grained sand. This formation is described as “muddy” sand that contains sandy limestone interbeds and is relatively low in yield in comparison to deeper aquifers in the area. The Aquia Formation is approximately 100 feet thick in the vicinity of the site.

1.2 Hydrogeology

Groundwater flow direction onsite generally mimics the topography, with groundwater flowing towards the surface water features located west and south of the landfill. Although a minor component of groundwater discharges to Ferry Branch, located to the south of the Site, groundwater primarily flows from east to west toward the Patuxent River.

1.3 Semi-Annual Monitoring Event

The 2019 Second Semi-Annual Environmental Monitoring Event for the Sands Road Landfill was conducted on July 31, 2019 and August 01, 2019. Prior to sampling, the six (6) monitoring wells were inspected and the groundwater elevations were measured. All wells were sampled with a submersible pump that was thoroughly decontaminated between sampling locations. The pump intake was set within each well's screened interval, where the well was pumped so as to induce minimum drawdown of the water column. The water purged from each well was discharged downgradient of the wellhead. The discharge water was monitored with a water quality meter, and upon stabilization of the field parameters the sample was collected and then sent to a contracted laboratory to be analyzed for the MDE Tables I and II. The measured field parameters (temperature, specific conductance, turbidity, pH, dissolved oxygen and oxidation reduction potential) from the discharge water, as well as drawdown, for each well were measured and recorded in the field logbook. Three (3) Surface Water samples were collected from locations designated SW-1 through SW-3 as part of this semi-annual monitoring event. Copies of the field logs from the 2019 Second Semi-Annual Environmental Monitoring Event are included in Appendix A of this report.

Quarterly landfill gas (LFG) monitoring for the third and fourth quarters was conducted on August 8, 2019 and October 21, 2019. The Semi-Annual Closed Landfill Inspection was conducted on August 8, 2019.

1.4 Quality Assurance / Quality Control

In addition to the Quality Assurance (QA) and Quality Control (QC) performed by the contract laboratory, blank and duplicate samples were collected to establish QC for sampling and handling techniques. Rinsate blanks were prepared on-site by running deionized water over sampling equipment after decontamination. The rinsate blank and duplicate samples establish QC for sample collection techniques in the field. All samples were analyzed by ALS Global Environmental of Middletown, Pennsylvania. The laboratory analytical data can be found in Appendix B.

There were no VOC detections in the laboratory prepared trip blanks.

Rinsate Blanks were collected on July 31, and August 1, 2019 during the 2019 Second Semi-Annual Monitoring Event. Carbon disulfide, Calcium, Iron, Alkalinity, Hardness, and Total Dissolved Solids were detected above their MDE PQLs in the rinsate blank prepared on July 31, 2019. Calcium, Iron, Total Dissolved Solids, and Turbidity were detected above their MDE PQLs in the rinsate blank prepared on August 01, 2019. It should be noted Carbon Disulfide was not detected in any of the ground water monitoring wells during this semi-annual monitoring event. There were no other VOCs or inorganic parameters detected above their prescribed MDE PQLs in the rinsate blanks.

Detections in the duplicate sample taken from well MW-11 were of similar concentration to the original sample except for Manganese, Total Dissolved Solids, and Turbidity. Manganese was detected at a concentration of 0.032 mg/L in the original and 0.024 mg/L in the duplicate. Total Dissolved Solids were detected at a concentration of 475 mg/L in the original and 521 mg/L in the duplicate. Turbidity was detected at a concentration of 25 mg/L in the original and 15.2 mg/L in the duplicate. QA/QC data is included with the analytical result summary from the event in Appendix B and historical data summaries for each monitoring well.

1.5 Chain of Custody

Each sample bottle collected at the Sands Road Landfill was marked and recorded on the Chain of Custody (COC) with a unique sample designation. Additionally, the sample location, collection time, sample type, and analysis requested were recorded on the COC form. The COC records are established upon receipt of the bottle ware and transported along with the samples through to submission to the lab. This allows for complete sample accountability throughout the process. The samples were preserved as required by the test method and relinquished to the laboratory personnel for transportation to the laboratory. Copies of the COCs are included in Appendix B along with the analytical data for the sampling event.

2.0 GROUNDWATER ELEVATION CONTOUR MAP

A Groundwater Elevation Contour Map was prepared using depth to water measurements from the July 2019 monitoring event and well casing elevation data supplied by Anne Arundel County. The predominant groundwater flow direction is to the west towards the Patuxent River. The Groundwater Elevation Contour Map is included as Figure 2.

3.0 ANALYTICAL RESULTS

In accordance with the Sands Road Park Rubble Landfill Groundwater Monitoring Plan (SCS, 2017), the groundwater samples were analyzed for a specified parameter list, MDE Table I, Volatile Organic Compounds (VOCs) and MDE Table II, Elements and Indicator Parameters. A tabular summary of the analytical results from the semi-annual monitoring event is included in Appendix B with the historical data summary for each well and raw laboratory data from ALS Global Environmental of Middletown, Pennsylvania.

3.1 Volatile Organic Compounds

Each sample collected was analyzed for the list of VOCs on MDE Table I during the 2019 Second Semi-Annual Environmental Monitoring Event. There was one (1) VOC detection above the PQL in groundwater well MW-10 for Methyl- tert-butyl ether at a concentration of 2.5 ug/L. There were no VOC detections above their PQLs in the surface water during the 2019 Second Semi-Annual Environmental Monitoring Event.

3.2 Inorganic Compounds

The laboratory analysis reported one (1) inorganic compound in exceedance of its MCL in one (1) monitoring well during the 2019 Second Semi-Annual Environmental Monitoring Event (Table 1).

Table 1. Inorganics Detected Above the MCL in Ground Water

Parameter	PQL	MCL	MW-7
Arsenic	0.002	0.01	0.057

*All concentrations in mg/L

There was one inorganic detection above its respective Numerical Criteria for Toxic Substances (NCTS) in the surface water samples taken during the 2019 Second Semi-Annual Monitoring Event (Table 2).

Table 2. Inorganics Above the MCL in Surface Water

Parameter	PQL	NCTS	SW-1
Arsenic	0.002	0.00018	0.0011

*All Concentrations in mg/L

4.0 STATISTICAL ANALYSIS

In accordance with 40 CFR part 258, the groundwater monitoring data was statistically evaluated using either the Non-Parametric ANOVA or the One-Way ANOVA procedures. Both the Non-Parametric ANOVA (Kruskal-Wallis) and Parametric ANOVA procedures determine if there is a Statistically Significant Increase (SSI) for a particular analyte in the down-gradient wells as compared to the site's background wells, which are hydraulically upgradient of the waste cells. Upgradient well MW-6 was compared to down-gradient wells MW-7, MW-8, MW-9, MW-10 and MW-11. A commercially available software package (*ChemStat*) was utilized to statistically evaluate the data. The statistical calculations performed for this event are detailed in Appendix C.

Prior to running any statistical tests, the data was transformed to its natural logarithm, as is required by the test method. The chemical data were then tested for fit against a normal distribution using the Shapiro-Wilks-Francia Test for Normality. If the data fit a normal distribution, they were then analyzed using the Levene's Test for Equal Variance in order to determine if Parametric ANOVA analysis or Kruskal-Wallis Non-Parametric Analysis was appropriate.

If the Shapiro-Wilks-Francia test determined that the data did violate normal distribution assumptions, the non-parametric ANOVA method was used (Kruskal-Wallis). When the parametric ANOVA procedure was used, all non-detectable data was replaced by the Laboratory Detection Limit. When the non-parametric procedure was used, the non-detects were replaced by ranked values by treating all the non-detects as tied values. The statistical analysis can be found in Appendix C of this report.

The following detections were determined to be SSIs over background during this monitoring event:

- MW-7 showed SSIs for Alkalinity, Arsenic, Chromium, Iron, and Vanadium.
- MW-9 showed SSIs for Nickel, Potassium and Sulfate.
- MW-10 showed SSIs for Alkalinity, Chloride, and Sulfate.
- MW-11 showed SSIs for Alkalinity, Iron, Nickel, Potassium, and Sulfate.

Of the above Sixteen (16) SSIs, only five (5) are 40 CFR 258 Appendix I parameters. Only one (1) SSI was observed above its USEPA MCL during this monitoring period, Arsenic in well MW-7. Nickel was an SSI in monitoring wells MW-9 and MW-11. Arsenic was an SSI in monitoring well MW-7. Vanadium was an SSI in monitoring well MW-7. Chromium was an SSI in well MW-7. In addition to the ANOVA analysis, MES performed Mann-Kendall Upward and Downward Tests for historical Arsenic detections

in MW-7. The Mann-Kendall Trend Test is a non-parametric test for trends in data over time. Mann-Kendall is an intra-well test that is suitable for data that do not follow a normal distribution. Therefore, the Shapiro-Wilks-Francia Test for Normality was run on the data sets prior to running the Mann-Kendall Test to determine if this analysis was appropriate. The data sets were not normally distributed, so both the Mann-Kendall Upward Trend and Downward Trend Tests were conducted. Both the Upward and Downward Trend Tests were run at a 95% confidence level. There was no evidence of an upward or downward trend for historical Arsenic concentrations in well MW-7. The supplemental Mann-Kendall analysis is included in Appendix C.

5.0 LANDFILL GAS MONITORING

There are seven (7) landfill gas (LFG) monitoring probes at the facility. LFG probes GP-3, GP-4, GP-5, GP-6 and GP-7 are constructed as multiple-depth monitoring probes, while LFG probes GP-1 and GP-2 monitor a single depth interval. The locations of these probes are shown on Figure 2. Each LFG probe was monitored with a GEM 2000 Gas Analyzer or Elkins Earthworks Envision Gas Analyzer System (GAS). The GEM/GAS readings were compared to the 40 CFR § 258.23 and COMAR 26.04.07 compliance limits of 25% of the LEL (lower explosive limit of methane) in onsite structures, and 100% of the LEL at the property boundary. There are no structures at the site currently that require monitoring.

Site gas probes were monitored quarterly as is specified in the monitoring plan. Quarterly LFG Monitoring was conducted on August 8, 2019 October 21, 2019. There were no methane detections to report for the third and fourth quarter events. The results from the quarterly LFG events are included in Appendix D.

6.0 SEMI-ANNUAL LANDFILL INSPECTION

In accordance with COMAR 26.04.07.22, a semi-annual closed landfill inspection was conducted on August 8, 2019. Overall, the former rubble landfill was found to be in good condition. The landfill cap and cover were visually inspected and found in good order. Neither Anne Arundel County nor MES have a fail proof recommendation regarding any type of barricade that could not be violated unless the entire site is fenced. Fencing would be prohibitively costly, and the minor damage by ATVs does not support this expense. Any barricades to the power line right of way would need to be mutually acceptable to the power company. MES recommends replacing the missing lock and chain to the main entrance gate leading to the top of the landfill, and that the county continue with its maintenance and mowing plan as established and that any small trees that show up on the cap are removed as needed. The entire 2019 Second Semi-Annual Closed Landfill Inspection report is attached as Appendix E.

7.0 SUMMARY

There was one (1) VOC detection above the PQL in groundwater well MW-10 for Methyl- tert-butyl ether (MTBE) at a concentration of 2.5 ug/L. It should be noted that MTBE has been historically detected in upgradient monitoring well MW-6 and is in the direct flow path of MW-10, making it possible that the MTBE present in the well could be from another source. There were no VOC detections above their PQLs in the surface water during the 2019 Second Semi-Annual Environmental Monitoring Event.

One (1) inorganic parameter was found in exceedance of its MCL during this monitoring event. Arsenic was detected in exceedance of its MCL of 0.01 mg/L in monitoring well MW-7 at a concentration of 0.057 mg/L. Arsenic has been routinely detected in well MW-7 and has historically had MCL exceedances in other site monitoring wells, including upgradient monitoring well MW-6. Given the sporadic presence of Arsenic throughout the sites wells and historical data sets, including the upgradient, background monitoring well, MES recommends no further action other than continued monitoring. In 2010, the Maryland Geologic Survey released a study entitled, “Arsenic in Groundwater in the Coastal Plain Aquifers of Maryland.” The study notes naturally occurring arsenic concentrations in the area of the site at levels above its MCL. The study offers several mechanisms for naturally occurring Arsenic mobilization in groundwater. Some of these mechanisms are possible based on the geochemical aquifer conditions observed at MW-7. Given the seasonal reducing conditions observed and the abundant iron oxyhydroxides found throughout the Maryland Coastal Plain, reductive dissolution of Arsenic from these substrates is a possible mobilization mechanism. Analytical ferrous iron data would provide a strong indicator as to whether this reaction is occurring. The elevated hardness of the samples also indicates that there is sufficient calcite in the aquifer matrix, possibly existing as shell material, to provide a substrate for the dissolution of calcite which often contains a reduced form of Arsenic. At this point, a definitive explanation for the Arsenic detections at the site is not available. However, considering the historical detections and exceedances for Arsenic in the hydraulically upgradient well, the presence of Arsenic in the downgradient wells cannot be attributed entirely to the landfill. Additionally, it should be noted that upgradient well MW-6 is cross-gradient to well MW-7. Drilling an upgradient well more directly in line with the flow path of MW-7 may result in a more statistically accurate view of Arsenic SSIs in well MW-7. It is plausible that the SSI is a function of simple spatial heterogeneity that is prevalent in fluvial sediments.

There was one (1) inorganic detection exceeding its NCTS in the surface water samples collected during the 2019 Second Semi-Annual Monitoring Event. Arsenic was detected in exceedance of its NCTS of 0.00018 mg/L in SW-1 at a concentration of 0.0011 mg/L.

It should be noted that SW-1 is located hydraulically upgradient to the sites waste cells directly off of Sands Road. The location of the sample makes it highly unlikely that the Arsenic exceedance is tied to the landfill. Furthermore, as noted above it has been documented that arsenic is naturally occurring in the coastal plain soils and groundwater.

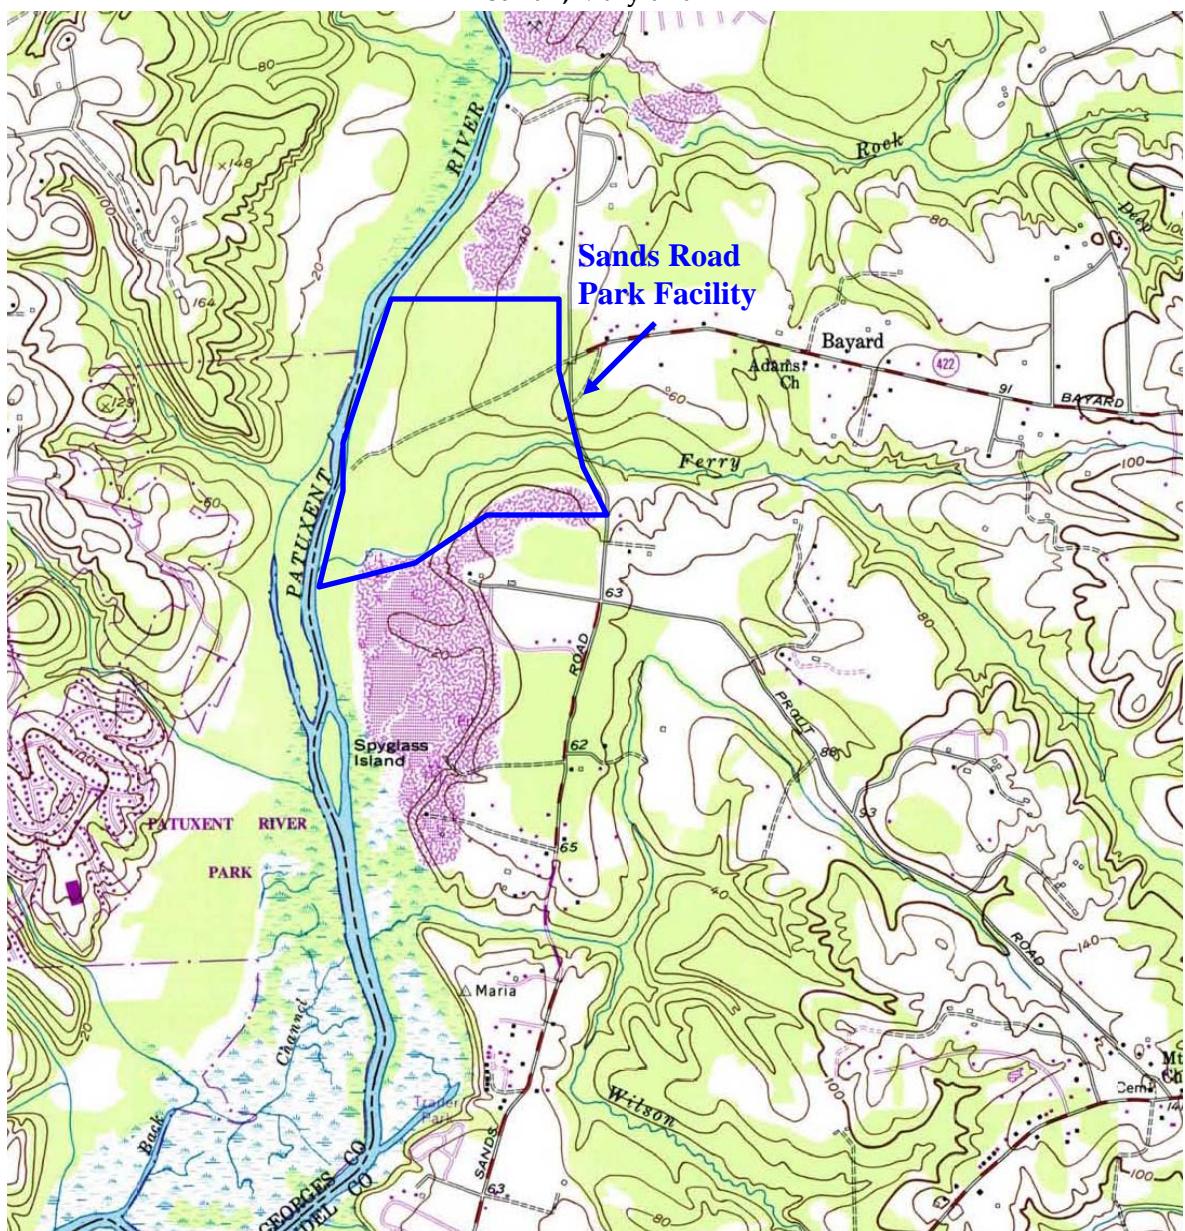

There were no methane exceedances to report for the third and fourth quarter monitoring events.

MES recommends that the Sands Road Rubble Landfill remain in a Detection Monitoring Program.

Certificate of Analysis

Project Name: **SANDS ROAD LANDFILL**
Purchase Order: **ENVOPS**

Workorder: **3049097**
Workorder ID: **SANDS ROAD LANDFILL**

Dear Ms. Griffin:

Enclosed are the analytical results for samples received by the laboratory on Thursday, August 1, 2019.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Mrs. Vanessa N Badman (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

SAMPLE SUMMARY

Workorder: 3049097 SANDS ROAD LANDFILL

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)
(S)	Surrogate Compound
NC	Not Calculated
*	Result outside of QC limits

ANALYTICAL RESULTS

Workorder: 3049097 SANDS ROAD LANDFILL

PARAMETER QUALIFIERS

Lab ID	#	Sample ID	Analytical Method	Analyte
3049097001	1	MW-7	SW846 8260B	Methyl t-Butyl Ether
				The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.
3049097001	2	MW-7	S4500HB-11	pH
				The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.
3049097001	3	MW-7	S2540C-11	Total Dissolved Solids
				The Method Blank for method S2540C-11 reported a value greater than the reporting level for the analyte Total Dissolved Solids.
3049097001	4	MW-7	SM2320B-2011	Alkalinity, Total
				The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L.
3049097002	1	MW-10	SW846 8260B	Trichlorofluoromethane
				The QC sample type MS for method SW846 8260B was outside the control limits for the analyte Trichlorofluoromethane. The % Recovery was reported as 146 and the control limits were 38 to 123.
3049097002	2	MW-10	SW846 8260B	Trichlorofluoromethane
				The QC sample type MSD for method SW846 8260B was outside the control limits for the analyte Trichlorofluoromethane. The % Recovery was reported as 130 and the control limits were 38 to 123.
3049097002	3	MW-10	SW846 8260B	1,1-Dichloroethene
				The QC sample type MS for method SW846 8260B was outside the control limits for the analyte 1,1-Dichloroethene. The % Recovery was reported as 136 and the control limits were 63 to 128.
3049097002	4	MW-10	SW846 8260B	trans-1,2-Dichloroethene
				The QC sample type MS for method SW846 8260B was outside the control limits for the analyte trans-1,2-Dichloroethene. The % Recovery was reported as 129 and the control limits were 71 to 122.
3049097002	5	MW-10	SW846 8260B	Methyl t-Butyl Ether
				The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.
3049097002	6	MW-10	SW846 8260B	Methyl t-Butyl Ether
				The QC sample type MS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 123 and the control limits were 69 to 115.
3049097002	7	MW-10	SW846 8260B	Methyl t-Butyl Ether
				The QC sample type MSD for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.
3049097002	8	MW-10	SW846 8260B	Chloroform
				The QC sample type MS for method SW846 8260B was outside the control limits for the analyte Chloroform. The % Recovery was reported as 125 and the control limits were 78 to 122.
3049097002	9	MW-10	SW846 8260B	Benzene
				The QC sample type MS for method SW846 8260B was outside the control limits for the analyte Benzene. The % Recovery was reported as 129 and the control limits were 80 to 124.
3049097002	10	MW-10	S4500HB-11	pH
				The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.
3049097002	11	MW-10	S2540C-11	Total Dissolved Solids
				The Method Blank for method S2540C-11 reported a value greater than the reporting level for the analyte Total Dissolved Solids.

Certificate of Analysis

Project Name: **SANDS ROAD LANDFILL**
Purchase Order: **ENVOPS**

Workorder: **3049101**
Workorder ID: **SANDS ROAD LANDFILL**

Dear Ms. Griffin:

Enclosed are the analytical results for samples received by the laboratory on Thursday, August 1, 2019.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Mrs. Vanessa N Badman (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

SAMPLE SUMMARY

Workorder: 3049101 SANDS ROAD LANDFILL

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)
(S)	Surrogate Compound
NC	Not Calculated
*	Result outside of QC limits

ANALYTICAL RESULTS

Workorder: 3049101 SANDS ROAD LANDFILL

PARAMETER QUALIFIERS

Lab ID	#	Sample ID	Analytical Method	Analyte
3049101001	1	MW-8	SW846 8260B	Methyl t-Butyl Ether
The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.				
3049101001	3	MW-8	S4500HB-11	pH
The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.				
3049101001	5	MW-8	SM2320B-2011	Alkalinity, Total
The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L.				
3049101001	6	MW-8	S2540C-11	Total Dissolved Solids
The sample was originally run within hold time, but required further analysis that exceeded hold time.				
3049101001	7	MW-8	S2540C-11	Total Dissolved Solids
The Method Blank for method S2540C-11 reported a value greater than the reporting level for the analyte Total Dissolved Solids.				
3049101002	1	MW-9	SW846 8260B	Methyl t-Butyl Ether
The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.				
3049101002	3	MW-9	S4500HB-11	pH
The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.				
3049101002	4	MW-9	S2540C-11	Total Dissolved Solids
The Method Blank for method S2540C-11 reported a value greater than the reporting level for the analyte Total Dissolved Solids.				
3049101002	5	MW-9	SM2320B-2011	Alkalinity, Total
The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L.				
3049101003	1	MW-11	SW846 8260B	Methyl t-Butyl Ether
The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.				
3049101003	3	MW-11	S4500HB-11	pH
The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.				
3049101003	4	MW-11	S2540C-11	Total Dissolved Solids
The Method Blank for method S2540C-11 reported a value greater than the reporting level for the analyte Total Dissolved Solids.				
3049101003	5	MW-11	SM2320B-2011	Alkalinity, Total
The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L.				
3049101004	1	MW-6	SW846 8260B	Methyl t-Butyl Ether
The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.				
3049101004	3	MW-6	S4500HB-11	pH
The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.				
3049101004	4	MW-6	S2540C-11	Total Dissolved Solids
The Method Blank for method S2540C-11 reported a value greater than the reporting level for the analyte Total Dissolved Solids.				
3049101004	5	MW-6	SM2320B-2011	Alkalinity, Total
The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L.

ANALYTICAL RESULTS

Workorder: 3049101 SANDS ROAD LANDFILL

3049101005 1 Rinse Blank SW846 8260B Methyl t-Butyl Ether
The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.

3049101005 2 Rinse Blank S4500HB-11 pH
The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.

3049101005 3 Rinse Blank S2540C-11 Total Dissolved Solids
The Method Blank for method S2540C-11 reported a value greater than the reporting level for the analyte Total Dissolved Solids.

3049101005 4 Rinse Blank SM2320B-2011 Alkalinity, Total
The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO₃/L.

3049101006 1 MW-11 DUP SW846 8260B Methyl t-Butyl Ether
The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.

3049101006 3 MW-11 DUP S4500HB-11 pH
The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.

3049101006 4 MW-11 DUP S2540C-11 Total Dissolved Solids
The Method Blank for method S2540C-11 reported a value greater than the reporting level for the analyte Total Dissolved Solids.

3049101006 5 MW-11 DUP SM2320B-2011 Alkalinity, Total
The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO₃/L.

3049101007 1 TRIP BLANK SW846 8260B Methyl t-Butyl Ether
The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.

Certificate of Analysis

Project Name: **SANDS ROAD LANDFILL**

Workorder: **3049100**

Purchase Order: **ENVOPS**

Workorder ID: **SANDS ROAD LANDFILL**

Dear Maryland Services-LF Data:

Enclosed are the analytical results for samples received by the laboratory on Thursday, August 1, 2019.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Mrs. Vanessa N Badman (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

SAMPLE SUMMARY

Workorder: 3049100 SANDS ROAD LANDFILL

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)
(S)	Surrogate Compound
NC	Not Calculated
*	Result outside of QC limits

ANALYTICAL RESULTS

Workorder: 3049100 SANDS ROAD LANDFILL

PARAMETER QUALIFIERS

Lab ID	#	Sample ID	Analytical Method	Analyte
3049100001	1	SW-1	SW846 8260B	Methyl t-Butyl Ether
The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.				
3049100001	3	SW-1	S4500HB-11	pH
The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.				
3049100001	4	SW-1	S2540C-11	Total Dissolved Solids
The Method Blank for method S2540C-11 reported a value greater than the reporting level for the analyte Total Dissolved Solids.				
3049100001	5	SW-1	SM2320B-2011	Alkalinity, Total
The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L.				
3049100002	1	SW-2	SW846 8260B	Methyl t-Butyl Ether
The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.				
3049100002	3	SW-2	S4500HB-11	pH
The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.				
3049100002	4	SW-2	S2540C-11	Total Dissolved Solids
The Method Blank for method S2540C-11 reported a value greater than the reporting level for the analyte Total Dissolved Solids.				
3049100002	5	SW-2	SM2320B-2011	Alkalinity, Total
The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L.

Certificate of Analysis

Project Name: **SANDS ROAD LANDFILL**
Purchase Order: **ENVOPS**

Workorder: **3049102**
Workorder ID: **SANDS ROAD LANDFILL**

Dear Ms. Griffin:

Enclosed are the analytical results for samples received by the laboratory on Thursday, August 1, 2019.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Mrs. Vanessa N Badman (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

SAMPLE SUMMARY

Workorder: 3049102 SANDS ROAD LANDFILL

Lab ID	Sample ID	Matrix	Date Collected	Date Received	Collected By
3049102001	SW-3	Water	8/1/2019 09:00	8/1/2019 21:00	Collected by Client

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)
(S)	Surrogate Compound
NC	Not Calculated
*	Result outside of QC limits

ANALYTICAL RESULTS

Workorder: 3049102 SANDS ROAD LANDFILL

PARAMETER QUALIFIERS

Lab ID	#	Sample ID	Analytical Method	Analyte
3049102001	2	SW-3	SW846 8260B	Methyl t-Butyl Ether
The QC sample type LCS for method SW846 8260B was outside the control limits for the analyte Methyl t-Butyl Ether. The % Recovery was reported as 120 and the control limits were 69 to 115.				
3049102001	3	SW-3	S4500HB-11	pH
The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.				
3049102001	4	SW-3	S2540C-11	Total Dissolved Solids
The Method Blank for method S2540C-11 reported a value greater than the reporting level for the analyte Total Dissolved Solids.				
3049102001	5	SW-3	SM2320B-2011	Alkalinity, Total
The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L.

Condition of Sample Receipt Form

Client:	Work Order #:	Initials:	Date:
MES	3049102	DN	8/2
1. Were airbills / tracking numbers present and recorded?.....		(NONE)	YES NO
Tracking number: _____			
2. Are Custody Seals on shipping containers intact?.....		NONE	YES NO
3. Are Custody Seals on sample containers intact?.....		NONE	YES NO
4. Is there a COC (Chain-of-Custody) present?.....		YES	NO
5. Are the COC and bottle labels complete, legible and in agreement?.....		YES	NO
5a. Does the COC contain sample locations?.....		YES	NO
5b. Does the COC contain date and time of sample collection for all samples?.....		YES	NO
5c. Does the COC contain sample collectors name?.....		YES	NO
5d. Does the COC note the type(s) of preservation for all bottles?.....		YES	NO
5e. Does the COC note the number of bottles submitted for each sample?.....		YES	NO
5f. Does the COC note the type of sample, composite or grab?.....		YES	NO
5g. Does the COC note the matrix of the sample(s)?.....		YES	NO
6. Are all aqueous samples requiring preservation preserved correctly?		N/A	YES NO
7. Were all samples placed in the proper containers for the requested analyses, with sufficient volume?.....			YES NO
8. Are all samples within holding times for the requested analyses?.....			YES NO
9. Were all sample containers received intact and headspace free when required? (not broken, leaking, frozen, etc.).....			YES NO
10. Did we receive trip blanks (applies only for methods EPA 504, EPA 524.2 and 1631E (LL Hg)?.....		(N/A)	YES NO
11. Were the samples received on ice?.....			YES NO
12. Were sample temperatures measured at 0.0-6.0°C.....			YES NO
13. Are the samples DW matrix ? If YES, fill out Reportable Drinking Water questions below.			YES NO
13a. Are the samples required for SDWA compliance reporting?.....		N/A	YES NO
13b. Did the client provide a SDWA PWS ID#?.....		N/A	YES NO
13c. Are all aqueous unpreserved SDWA samples pH 5-9?.....		N/A	YES NO
13d. Did the client provide the SDWA sample location ID/Description?.....		N/A	YES NO
13e. Did the client provide the SDWA sample type (D, E, R, C, P, S)?.....		N/A	YES NO

Cooler #: _____

Temperature (°C): 1 _____

Thermometer ID: 525 _____

Radiological (μ Ci): _____

COMMENTS (Required for all NO responses above and any sample non-conformance):

Calculation Results:

Kruskal-Wallis H Statistic = 0

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 0

95% Confidence comparison value is 11.0705 at 5 degrees of freedom

0 < 11.0705 indicating no significant group difference at 5% significance level

0 < 11.0705 indicating no significant group difference at 5% significance level when adjusted for ties

Calculation Results:

Kruskal-Wallis H Statistic = 0.235294

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 2.04082

95% Confidence comparison value is 11.0705 at 5 degrees of freedom

0.235294 < 11.0705 indicating no significant group difference at 5% significance level

2.04082 < 11.0705 indicating no significant group difference at 5% significance level when adjusted for ties

Calculation Results:

Kruskal-Wallis H Statistic = 16.733

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 16.9368

95% Confidence comparison value is 11.0705 at 5 degrees of freedom

16.733 > 11.0705 indicating a significant group difference at 5% significance level

16.9368 > 11.0705 indicating a significant group difference at 5% significance level when adjusted for ties

Individual Well Comparisons at 1% Significance Level per Comparison

1% Z score is 2.32634

Mean background rank is 38.3611

Calculation Results:

Kruskal-Wallis H Statistic = 7.57958

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 8.66089

95% Confidence comparison value is 11.0705 at 5 degrees of freedom

7.57958 < 11.0705 indicating no significant group difference at 5% significance level

8.66089 < 11.0705 indicating no significant group difference at 5% significance level when adjusted for ties

Calculation Results:

Kruskal-Wallis H Statistic = 28.0411

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 28.0411

95% Confidence comparison value is 11.0705 at 5 degrees of freedom

28.0411 > 11.0705 indicating a significant group difference at 5% significance level

28.0411 > 11.0705 indicating a significant group difference at 5% significance level when adjusted for ties

Individual Well Comparisons at 1% Significance Level per Comparison

1% Z score is 2.32634

Mean background rank is 17.96

Well	Mean Rank	Dif from Bkg	Critical Value
MW-10	40.2	22.24	16.6134
MW-7	15.4	-2.56	16.6134
MW-8	24.6	6.64	16.6134
MW-9	40.2	22.24	16.6134
MW-11	44.8	26.84	16.6134

Individual Well Comparisons at Groupwise 5% Significance Level

(1% Significance Level per comparison)

1% Z score is 2.32634

Mean background rank is 17.96

Well	Mean Rank	Dif from Bkg	Critical Value
MW-10	40.2	22.24	16.6134
MW-7	15.4	-2.56	16.6134
MW-8	24.6	6.64	16.6134
MW-9	40.2	22.24	16.6134
MW-11	44.8	26.84	16.6134
