

Appendix B. Plots of detection limits over time.

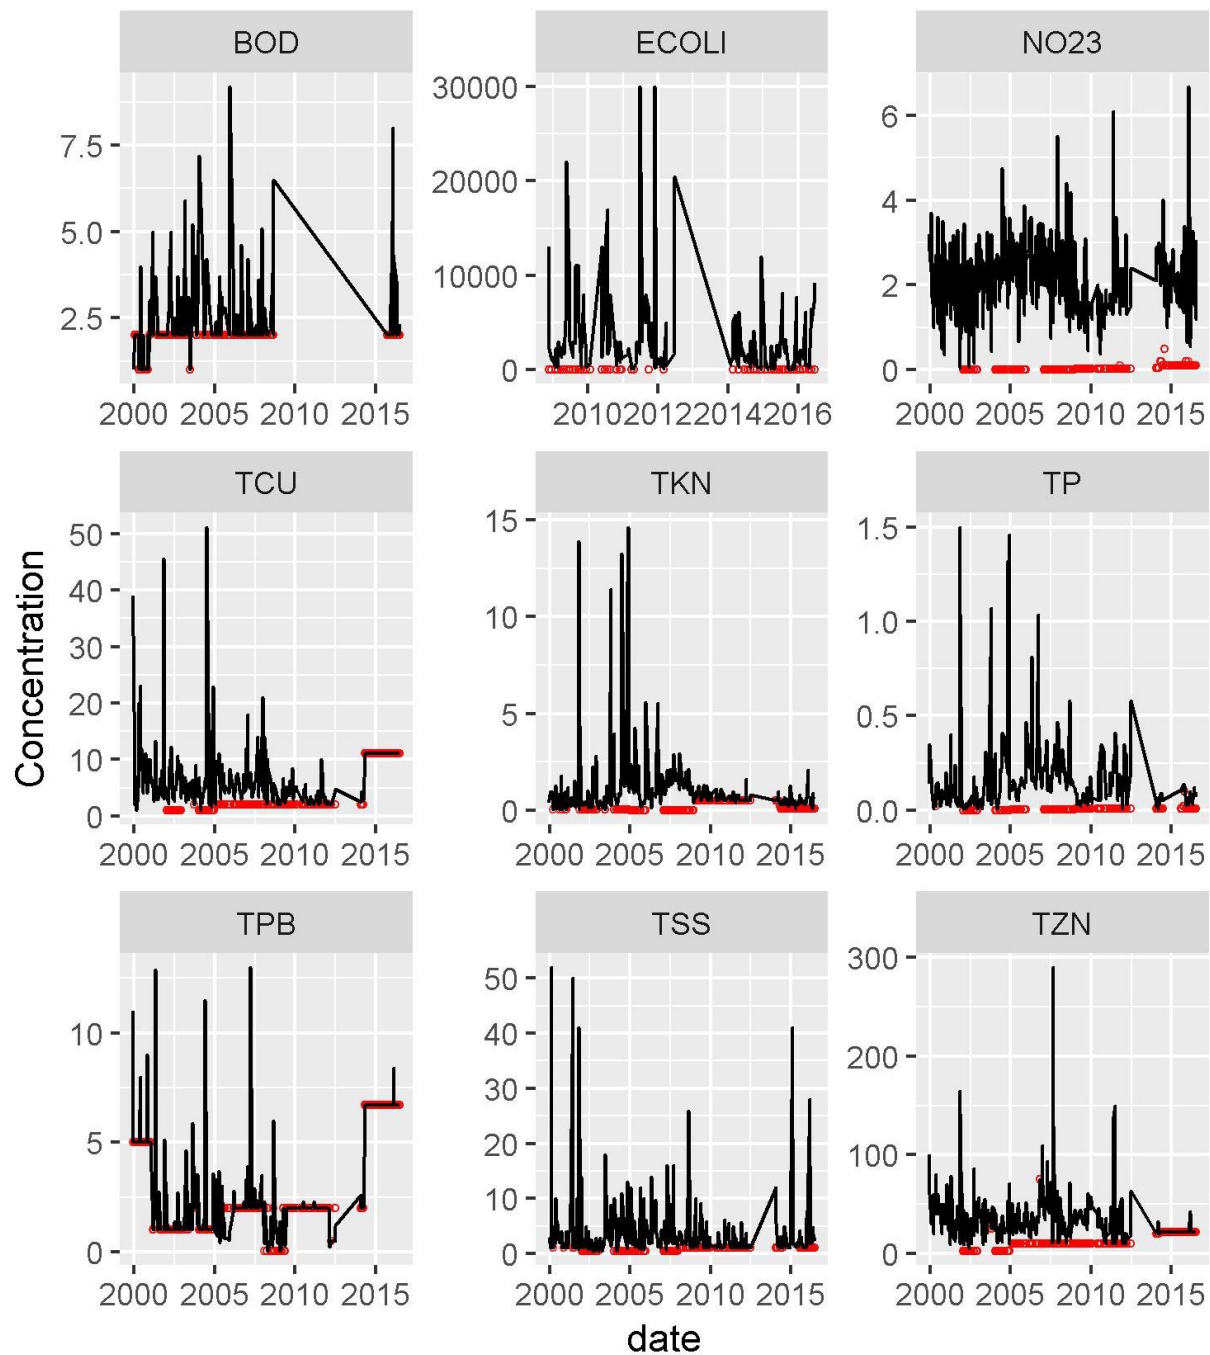

Figure 1. Plots of detection limits over time for BACI baseflow. Black lines are the measured values, and the red circles are the detection limits.

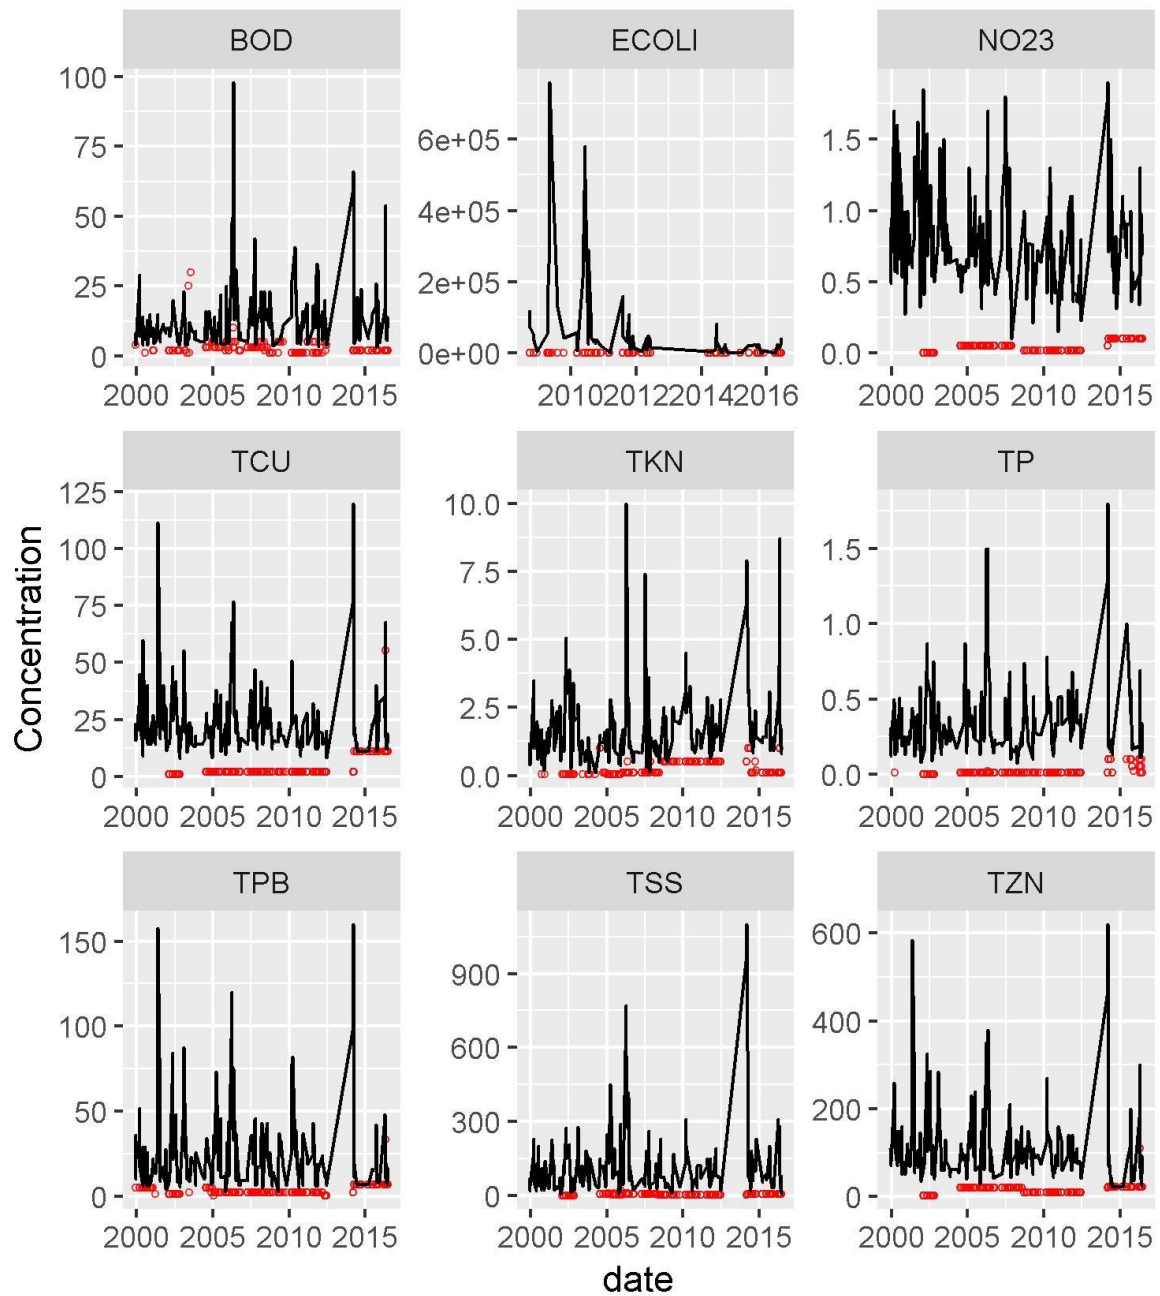

Figure 2. Plots of detection limits over time for BACI stormflow. Black lines are the measured values, and the red circles are the detection limits.

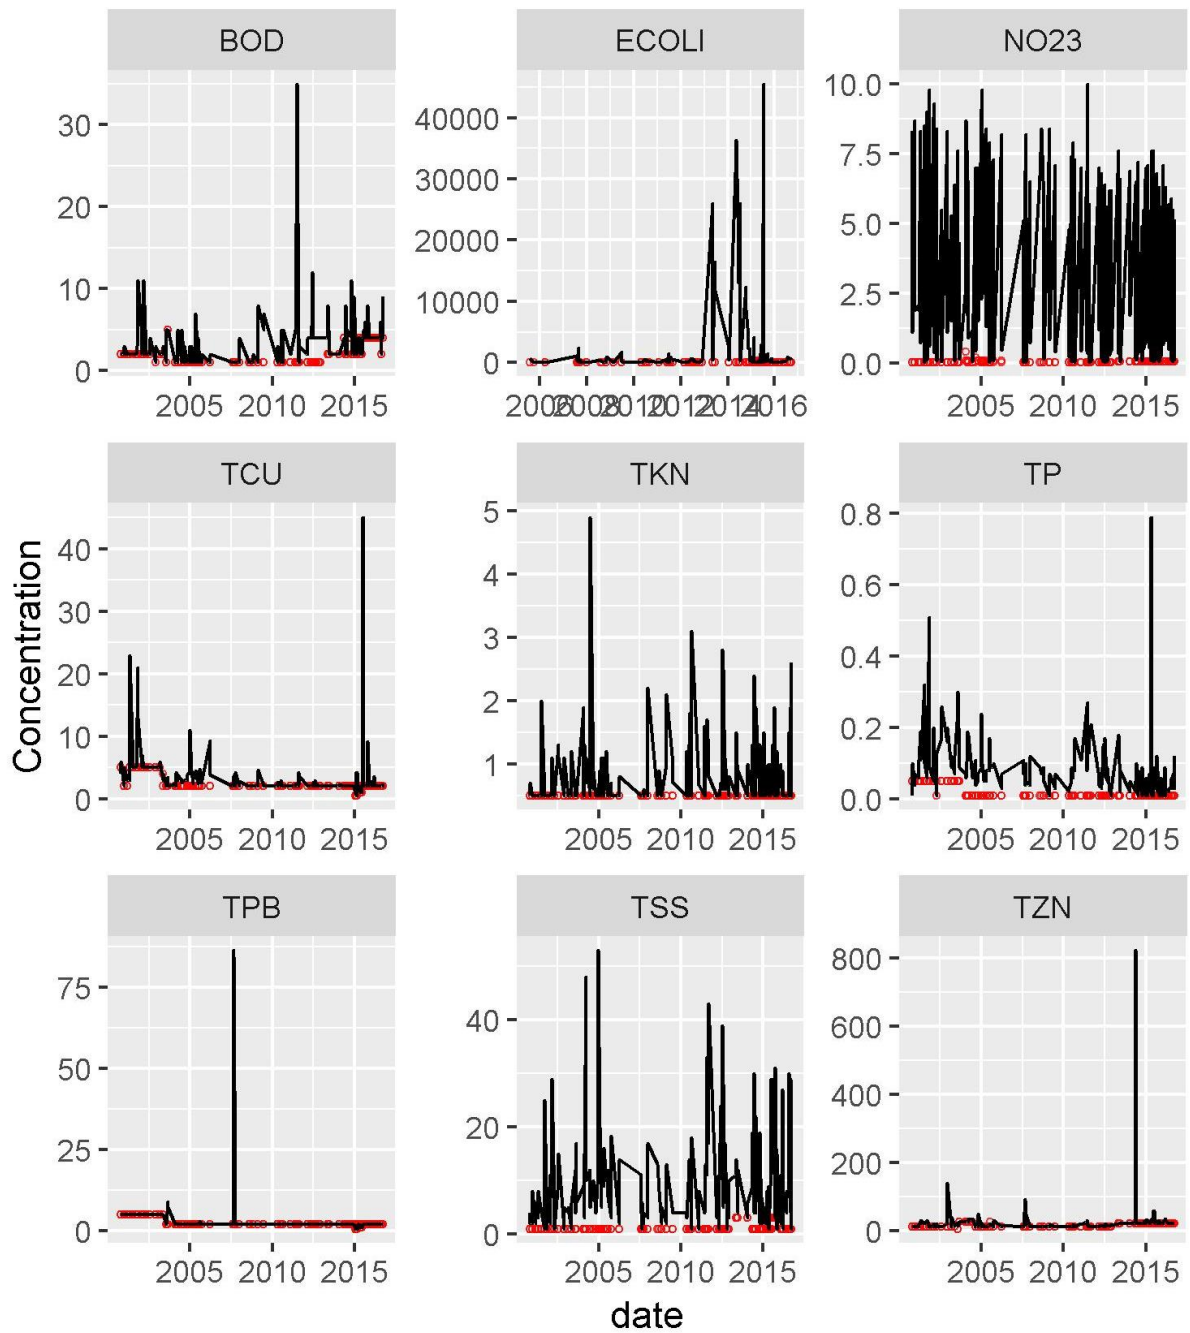

Figure 3. Plots of detection limits over time for CACO baseflow. Black lines are the measured values, and the red circles are the detection limits.

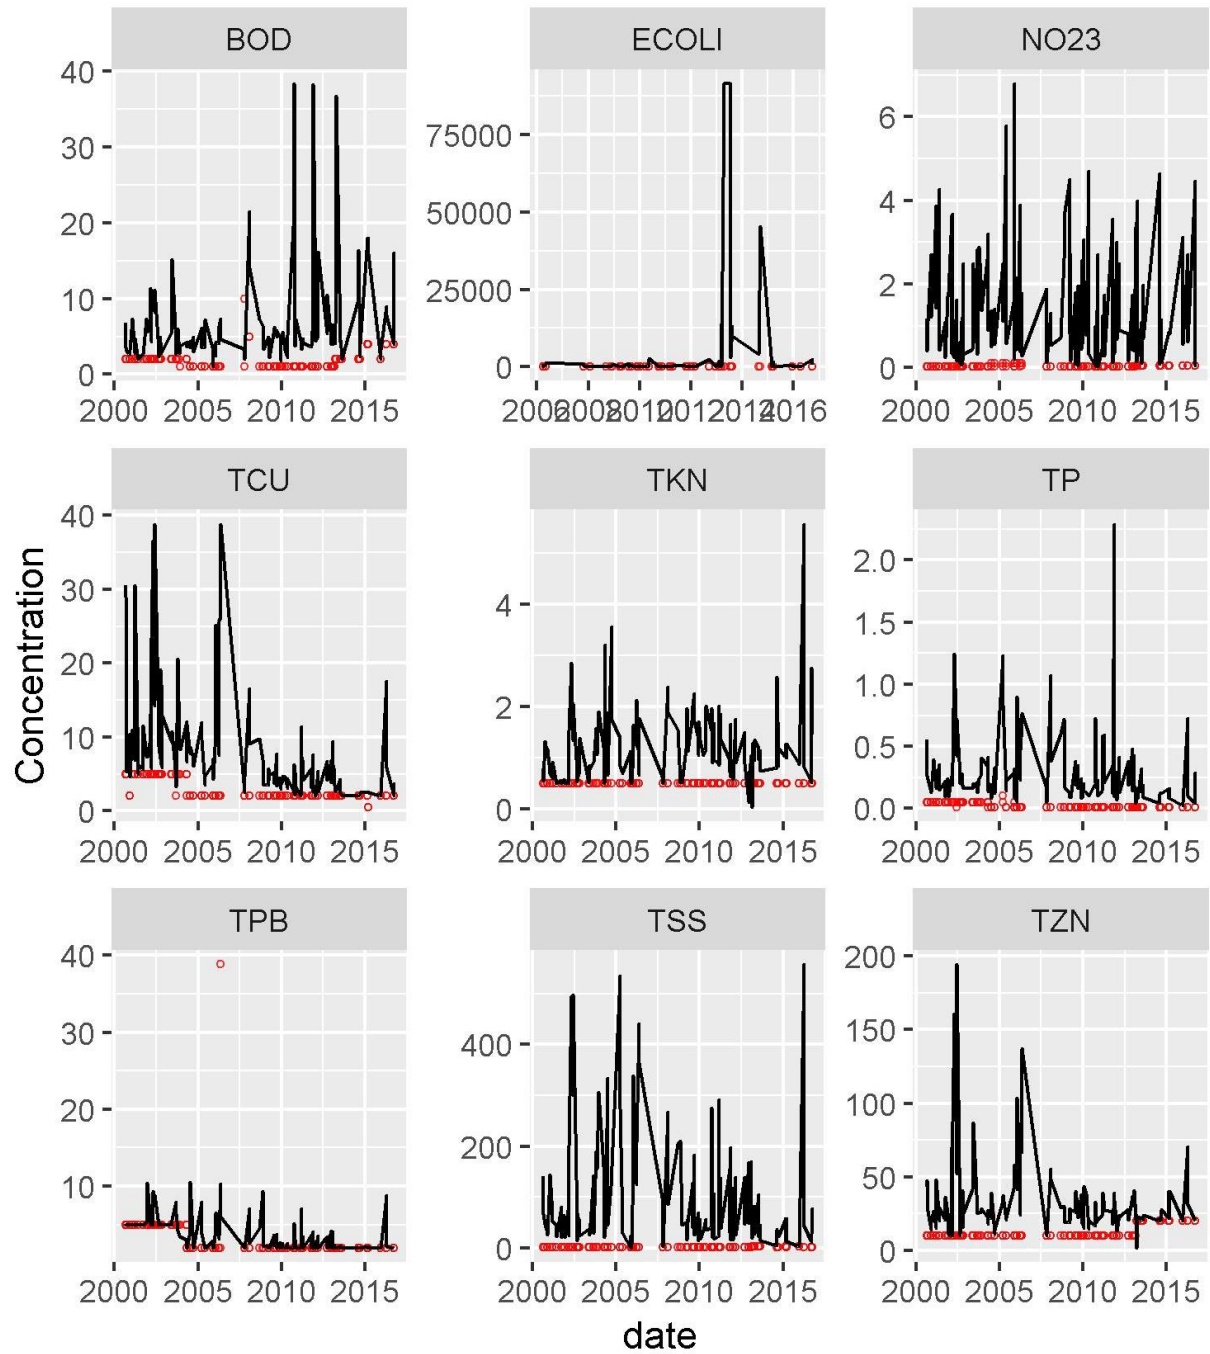

Figure 4. Plots of detection limits over time for CACO stormflow. Black lines are the measured values, and the red circles are the detection limits.

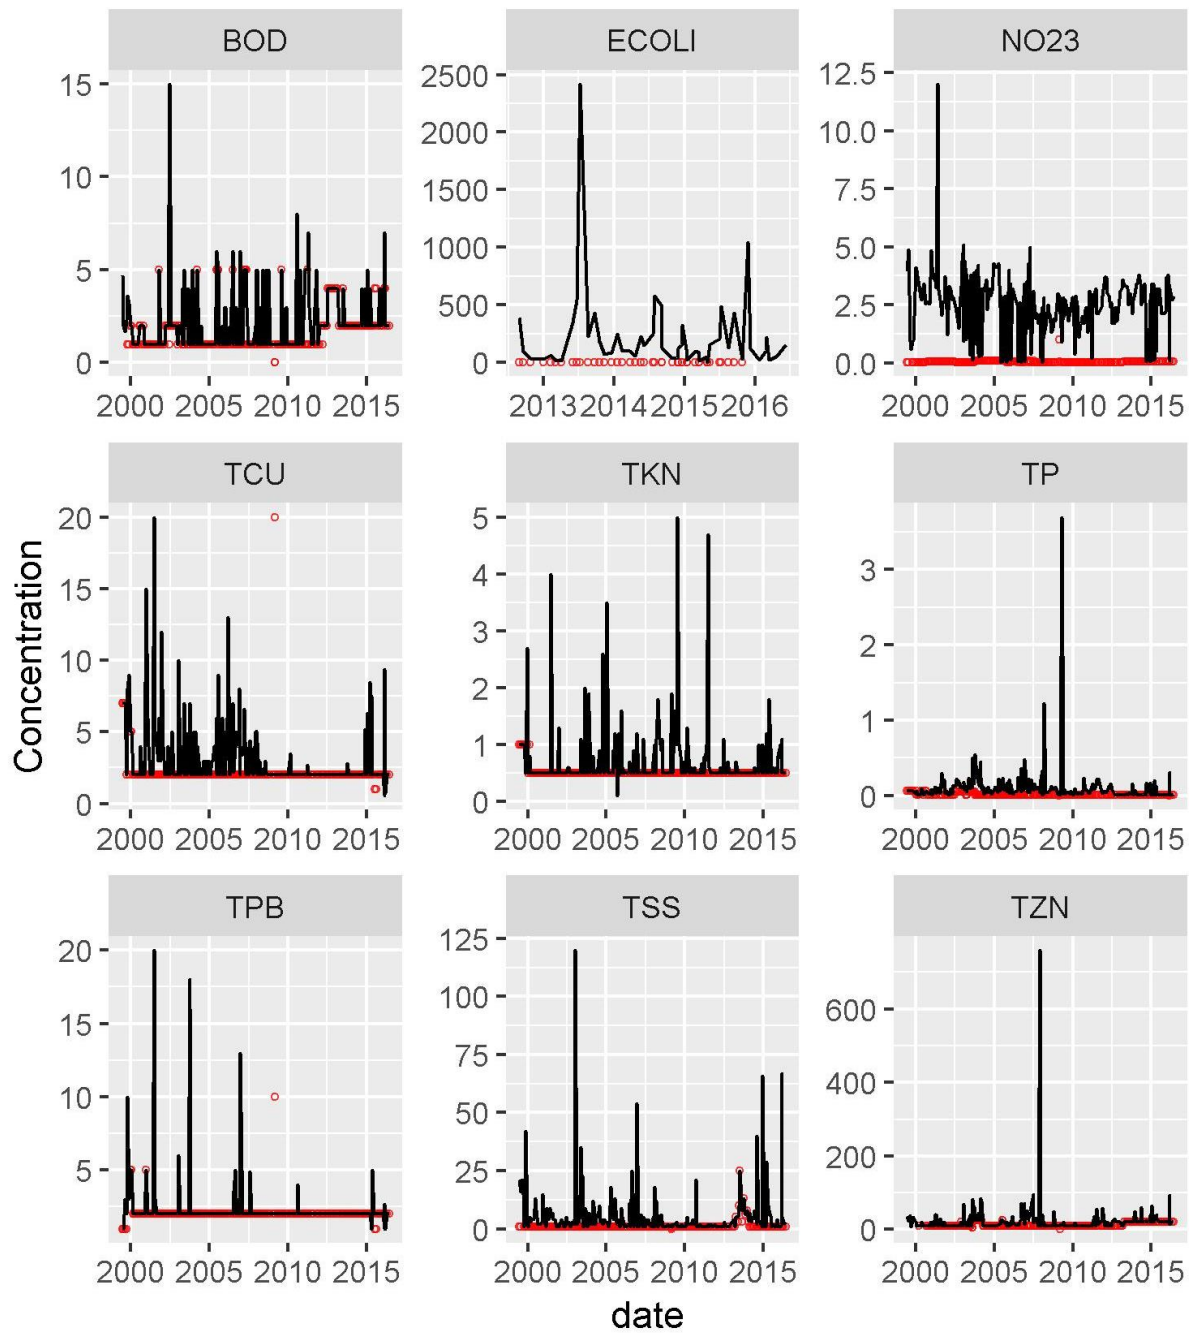

Figure 5. Plots of detection limits over time for FRCO baseflow. Black lines are the measured values, and the red circles are the detection limits.

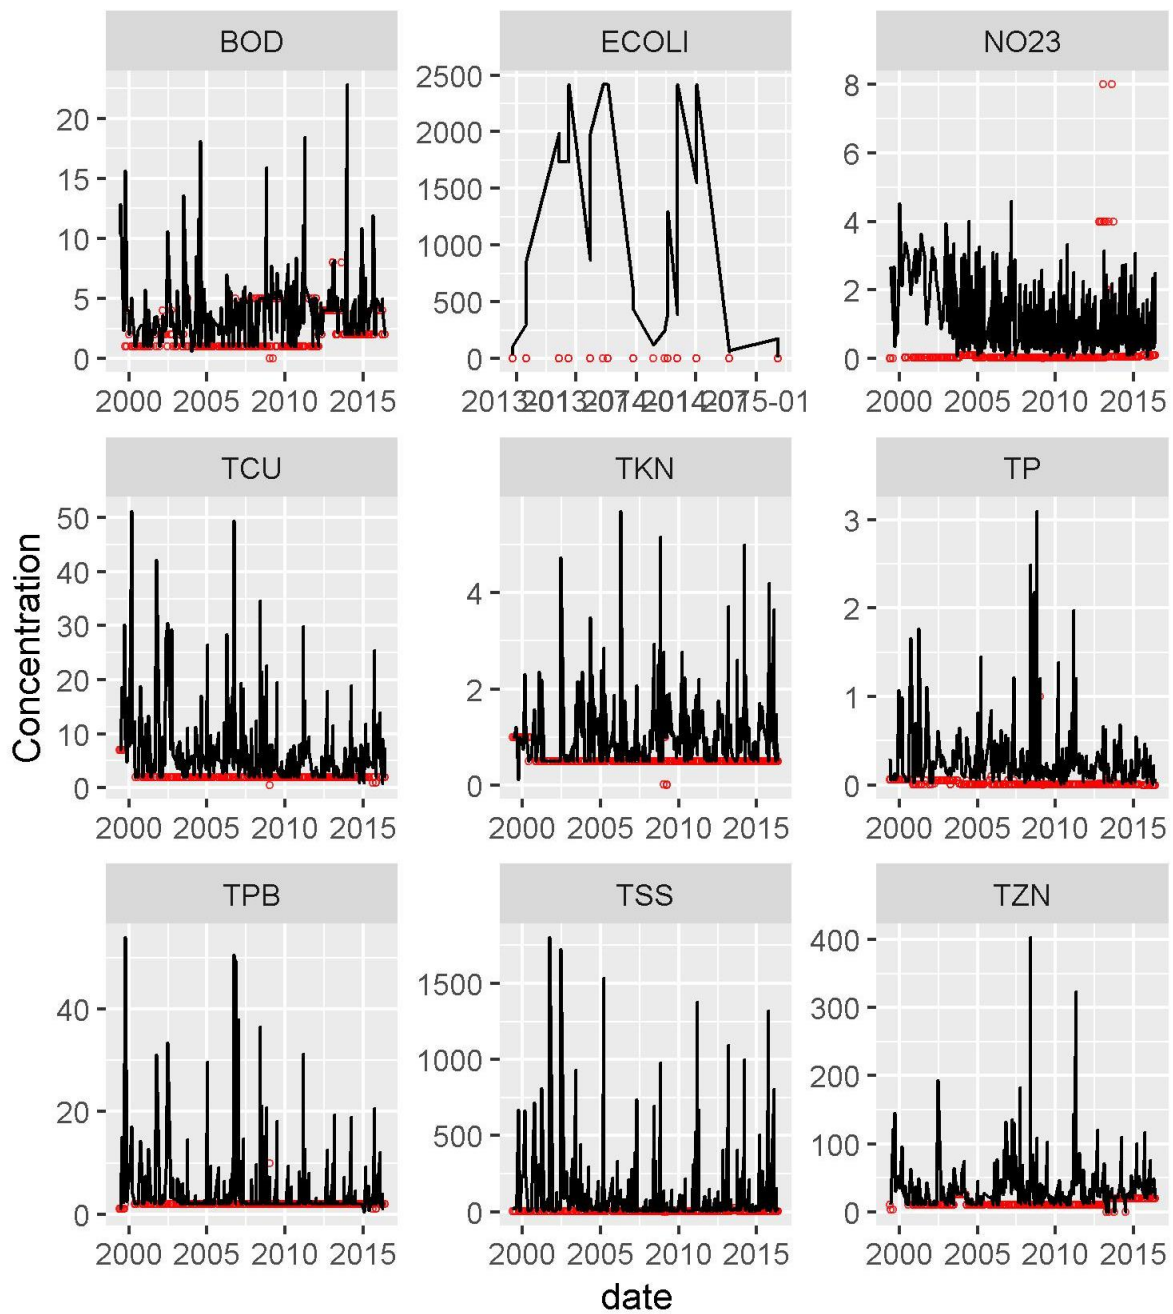

Figure 6. Plots of detection limits over time for FRCO stormflow. Black lines are the measured values, and the red circles are the detection limits.
