SECTION ONE
REPORT BASIS AND SUMMARY
INFORMATION

ANNUAL ENFORCEMENT AND COMPLIANCE REPORT FISCAL YEAR 2017

Statutory Authority and Scope

Environment Article §1-301(d), *Annotated Code of Maryland*, (see Appendix C for full text), requires the Maryland Department of the Environment (MDE) to report annual performance results for specific regulatory programs and the penalty dollars collected and deposited into several funds. This report is intended to fulfill that statutory requirement. In addition to the required information, this report also includes MDE's other enforcement programs, additional information about each program, and additional data about the activities and facilities that are subject to regulation under the Environment Article.

Organization of the Report

Section One includes an overall, Department-wide summary of the FY 2017 results. A table on pages eight through ten compares the historical annual Department-wide performance measures from FY 1998 – 2017. Two graphs on page 11 also illustrate trends for enforcement actions and penalties obtained for these years.

Section Two presents program-specific information concerning enforcement and compliance activities for the reported programs. Related materials appear as appendices in Section Three.

Inclusion of any facility on the cover is not an indication of its compliance status nor does it indicate that the facility is referenced in the report.

EXECUTIVE SUMMARY

The Maryland Department of the Environment's (MDE's) 21st Enforcement and Compliance Report, for Fiscal Year 2017 (July 2016-June 2017) reports data from MDE's enforcement and compliance programs and from the Environmental Crimes Unit of the Office of the Attorney General. This document has been prepared in accordance with the requirements of §1-301(d) of the Environment Article.

During FY 2017, MDE provided regulatory oversight for 162,068 regulated entities, with 64,766 permits in effect in 32 different enforcement areas. The number of permits in effect declined by 2,672, largely due to the continuing efforts to remove completed projects from the Erosion and Sediment Control section's data. The number of other regulated facilities decreased by more than 17,000, almost entirely due to a reduction in the number of properties required to register under the Lead Rental Registry. This reduction was mostly result of more property owners electing to get their properties certified lead free.

MDE inspected 70,607 sites, which is approximately the same number as FY 2016, and performed almost 190,000 inspections, audits, and spot checks, which is a 28% increase from FY 2016. Almost all of this increase is due to changes in the Water Supply Program monitoring of drinking water systems. The program implemented a new software system at the end of FY 2016. This new system provides for the tracking and auditing of several additional data items resulting in more than 41,000 additional audits.

There was a decrease in the number of enforcement actions this year as a continuing enforcement initiative for property owners who failed to renew rental registrations for the lead rental registry resulted in nearly 6,000 fewer enforcement action than in FY 2016. This initiative assists with the Department's ongoing efforts to reduce and eradicate childhood lead poisoning.

This year, penalties collected from environmental violators totaled \$3,233,531. This is a decrease from last year's total of \$3,735,405. Large changes in penalties collected often reflect the presence or absence of large settlements during the year. Collection of penalties sometimes takes place in a fiscal year after the violation is resolved. Large settlements can take longer to negotiate and collect than smaller amounts.

MDE has continued to prioritize compliance activities based on risks to public health and the environment.

MDE PERFORMANCE MEASURES EXECUTIVE SUMMARY

	<u>2016 Totals</u>	<u>2017 Totals</u>
<u>PERMITTED SITES/FACILITIES</u>		
Number of Permits/Licenses Issued	8,784	8,568
Number of Permits/Licenses in Effect at Fiscal Year End	67,438	64,766
<u>OTHER REGULATED SITES/FACILITIES</u>		
Total Sites	179,779	162,068
<u>INSPECTIONS</u>		
Number of Sites Inspected	70,545	70,607
Number of Sites Audited But Not Inspected	6,466	6,676
Number of Inspections, Audits, Spot Checks	148,756	189,721
<u>ENFORCEMENT ACTIONS</u>		
Number of Compliance Assistance Rendered	17,069	16,811
Number of Enforcement Actions Taken	14,829	8,249
<u>PENALTIES</u>		
Amount of Administrative or Civil Penalties Obtained*	\$3,731,060**	\$3,233,531
Supplemental Environmental Projects	6 (\$2,322,000)	3 (\$1,019,000)

* This reflects the amount collected in the fiscal year, not the penalties assessed. Collection of penalties sometimes takes place in a fiscal year after the violation is resolved. Large settlements can take longer to negotiate and collect than smaller amounts.

**Updated from previous report to account for refunds that were not taken out of the total.

ENFORCEMENT WORKFORCE

	Compensation*		Workforce			
			Inspectors**		FTE Vacancies***	
	FY 2016	FY 2017	FY 2016	FY 2017	FY 2016	FY 2017
Air/Radiation	\$3,397,563	\$3,968,505	39.0	39.0	2.60	2.2
Land	\$5,396,387	\$5,813,401	72.0	74.0	6.92	5.0
Water	\$3,885,912	\$3,713,509	41.21	46.71	13.89	3.99
Total	\$12,679,862	\$13,495,415	152.21	159.71	23.41	11.19

* "Compensation" includes wages plus fringe benefits. The numbers do not include any operating expenses such as vehicles, travel, gasoline, supplies, or other related employment expenses.

** "Inspectors" represent the number of enforcement field inspectors budgeted for the fiscal year. These numbers do not include any administrative, management, or clerical staff associated with enforcement and compliance programs. This table represents total budgeted positions, not the actual number of inspectors currently on staff.

*** "FTE (full-time equivalent) vacancies" represent the number of full-time-equivalent positions that were vacant during the fiscal year.

SECTION 1-301(d) PENALTY SUMMARY

TOTAL AMOUNT OF MONEY DEPOSITED AS A RESULT OF ENFORCEMENT ACTIONS AS REQUIRED BY SECTION 1-301(d)*	FY 2016	FY 2017
Clean Air Fund (includes Air Quality and Asbestos)	\$132,660	\$136,800
Clean Water Fund (includes Water and Land administrations)	\$1,278,422	\$1,694,380
Hazardous Substance Control Fund	\$16,550	\$48,067
Nontidal Wetland Compensation Fund	\$45,000	\$0
Oil Disaster Containment Clean Up and Contingency Fund	\$150,357	\$70,198
Recovered from Responsible Parties (under §7-221)**	\$255,144	\$124,205
Sewage Sludge Utilization Fund (This fund is now included in the Clean Water Fund)	\$0	\$0

* Includes **only** those funds **required** to be reported by the Environment Article, Section 1-301(d). Other penalties are reported by individual programs that total a higher amount since they are deposited into funds not required to be reported by 1-301(d). The Department total is \$3,233,531.

** The number reported is strictly the total amount of money, as a result of enforcement, recovered by the Department from responsible parties in accordance with §7-221 of the Environment Article as called for in the statute.

Please note this table reflects penalties collected during the fiscal year, not penalties assessed.

MDE PERFORMANCE MEASURES ANNUAL SUMMARY

FY 1998 - 2004

MDE Performance Measure	1998	1999	2000	2001	2002	2003	2004
PERMITTED SITES/FACILITIES							
Number of Permits/Licenses Issued	8,972	8,350	9,710	9,573	9,671	11,988	11,264
Number of Permits/Licenses in Effect at Fiscal Year End	54,668	56,024	57,253	62,679	62,882	69,831	75,729
OTHER REGULATED SITES/FACILITIES							
Other Sites	89,863	95,892	100,244	105,085	191,177	197,529	204,873
INSPECTIONS *							
Number of Sites Inspected	31,026	30,352	28,626	39,050	37,850	33,048	43,434
Number of Inspections, Audits, Spot Checks	81,372	83,899	90,488	103,782	108,043	98,550	106,845
ENFORCEMENT ACTIONS							
Number of Compliance Assistance Actions Rendered	15,837	14,709	15,831	15,032	16,523	14,120	18,646
Number of Enforcement Actions Taken	1,134	1,391	977	1,542	1,541	2,311	1,856
PENALTIES							
Amount of Penalties Obtained (\$)**	1,145,731	1,206,629	2,093,526	1,334,499	1,523,890	2,321,563	1,781,526

* Inspections:

Number of Sites Inspected: The number of individual sites physically visited and inspected for compliance.

Number of Inspections, Audits, Spot Checks: The total numbers of sites evaluated for compliance, including on-site inspections, record reviews, audits, and spot-check activities.

Each individual site can be inspected by several programs or by one program more than once, so the former is always less than the latter.

** Amount of Penalties Obtained: The total dollar amount of penalty revenue collected during the fiscal year. Note that penalties can be collected in the fiscal year after the violation for which they are assessed. This table reflects the amount of revenue obtained ("collected") in the fiscal year as a result of all enforcement actions regardless of the fund into which they are deposited.

MDE PERFORMANCE MEASURES ANNUAL SUMMARY

FY 2005 - 2010

MDE Performance Measure	2005	2006	2007	2008	2009	2010
PERMITTED SITES/FACILITIES						
Number of Permits/Licenses Issued	10,799	10,737	10,455	11,463	10,043	8,982
Number of Permits/Licenses in Effect at Fiscal Year End	73,155	77,721	77,041	100,206	92,960	93,323
OTHER REGULATED SITES/FACILITIES						
Other Sites	222,673	239,612	253,715	257,744	117,421	158,112
INSPECTIONS *						
Number of Sites Inspected	43,722	55,294	47,723	44,161	44,587	45,332
Number of Inspections, Audits, Spot Checks	103,586	115,977	107,496	122,389	122,079	124,045
ENFORCEMENT ACTIONS						
Number of Compliance Assistance Actions Rendered	10,953	11,067	10,158	11,443	14,412	21,352
Number of Enforcement Actions Taken	1,395	1,946	2,004**	2,704**	2,901	3,099
PENALTIES						
Amount of Penalties Obtained (\$)***	1,631,054	2,803,685	2,248,131	3,970,275	6,516,601	5,099,340

* Inspections:

Number of Sites Inspected: The number of individual sites physically visited and inspected for compliance.

Number of Inspections, Audits, Spot Checks: The total numbers of sites evaluated for compliance, including on-site inspections, record reviews, audits, and spot-check activities.

Each individual site can be inspected by several programs or by one program more than once, so the former is always less than the latter.

** These two numbers were corrected; they were previously reported as 2,011 and 2,699 respectively.

*** Amount of Penalties Obtained: The total dollar amount of penalty revenue collected during the fiscal year. Note that penalties can be collected in the fiscal year after the violation for which they are assessed. This table reflects the amount of revenue obtained ("collected") in the fiscal year as a result of all enforcement actions regardless of the fund into which they are deposited.

MDE PERFORMANCE MEASURES ANNUAL SUMMARY

FY 2011 - 2017

MDE Performance Measure	2011	2012	2013	2014	2015	2016	2017
PERMITTED SITES/FACILITIES							
Number of Permits/Licenses Issued	9,089	8,369	8,405	8,708	10,332	8,784	8,568
Number of Permits/Licenses in Effect at Fiscal Year End	92,195	92,271	92,537	78,588	69,088	67,438	64,766
OTHER REGULATED SITES/FACILITIES							
Other Sites	158,058	158,161	160,223	160,332	169,094	179,779	162,068
INSPECTIONS *							
Number of Sites Inspected	52,561	43,448	39,458	42,414	104,454	70,545	70,607
Number of Inspections, Audits, Spot Checks	129,213	122,046	118,836	126,337	183,192	148,756	189,721
ENFORCEMENT ACTIONS							
Number of Compliance Assistance Actions Rendered	21,323	21,121	18,200	20,536	16,762	17,069	16,811
Number of Enforcement Actions Taken	2,564	2,655	2,280	2,151	7,676	14,829	8,249
PENALTIES							
Amount of Penalties Obtained (\$) **	3,486,141	3,622,330	5,878,392	3,620,272	3,681,138	3,731,060 ***	3,233,531

* Inspections:

Number of Sites Inspected: The number of individual sites physically visited and inspected for compliance.

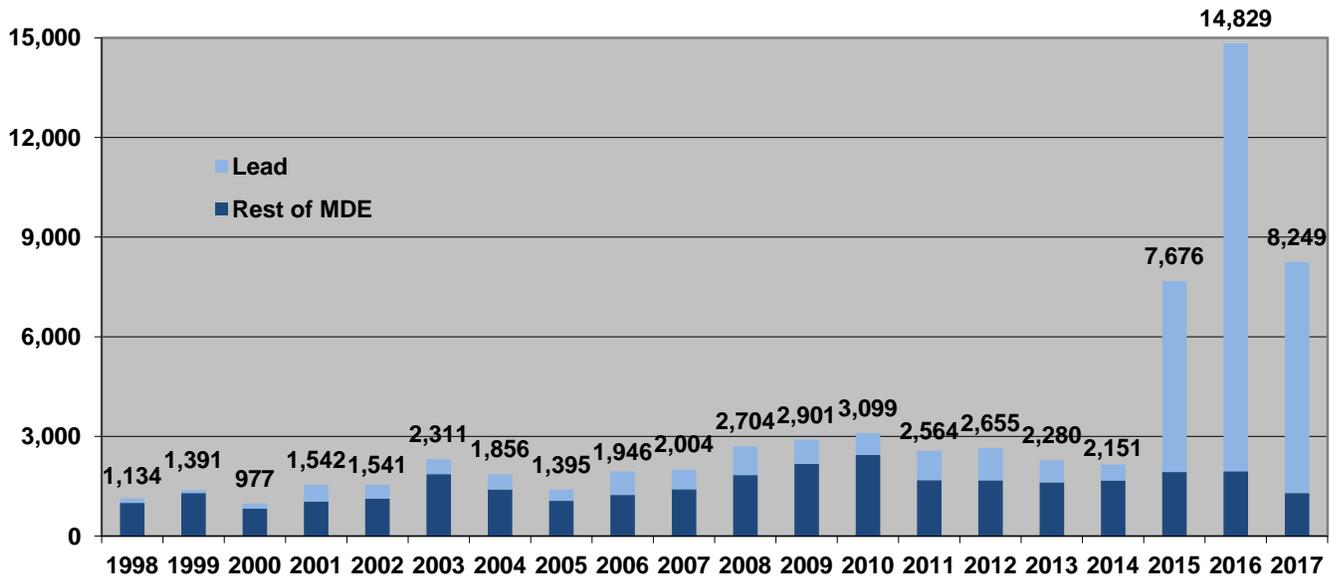

Number of Inspections, Audits, Spot Checks: The total numbers of sites evaluated for compliance, including on-site inspections, record reviews, audits, and spot-check activities.

Each individual site can be inspected by several programs or by one program more than once, so the former is always less than the latter.

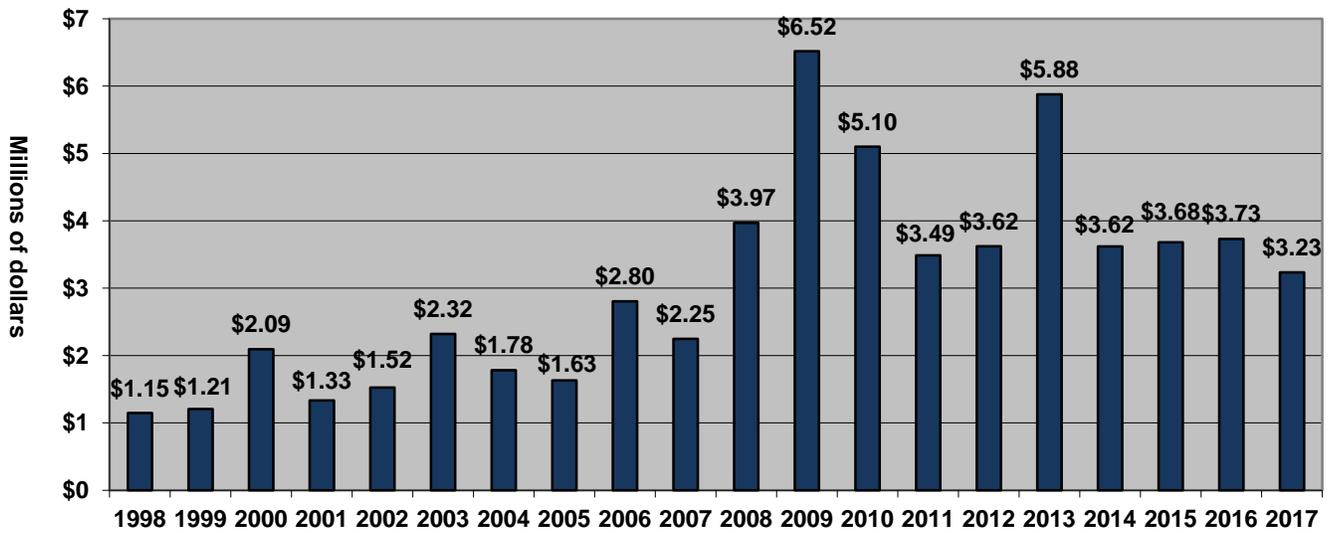

** Amount of Penalties Obtained: The total dollar amount of penalty revenue collected during the fiscal year. Note that penalties can be collected in the fiscal year after the violation for which they are assessed. This table reflects the amount of revenue obtained ("collected") in the fiscal year as a result of all enforcement actions regardless of the fund into which they are deposited.

*** FY 2016 updated from previous report to account for refunds that were not taken out of the total.

MDE Enforcement Actions Taken 1998-2017

MDE Penalty Amounts (\$) Collected 1998-2017

MDE'S ENFORCEMENT AND COMPLIANCE PROCESS and SERVICES TO PERMITTEES AND BUSINESSES

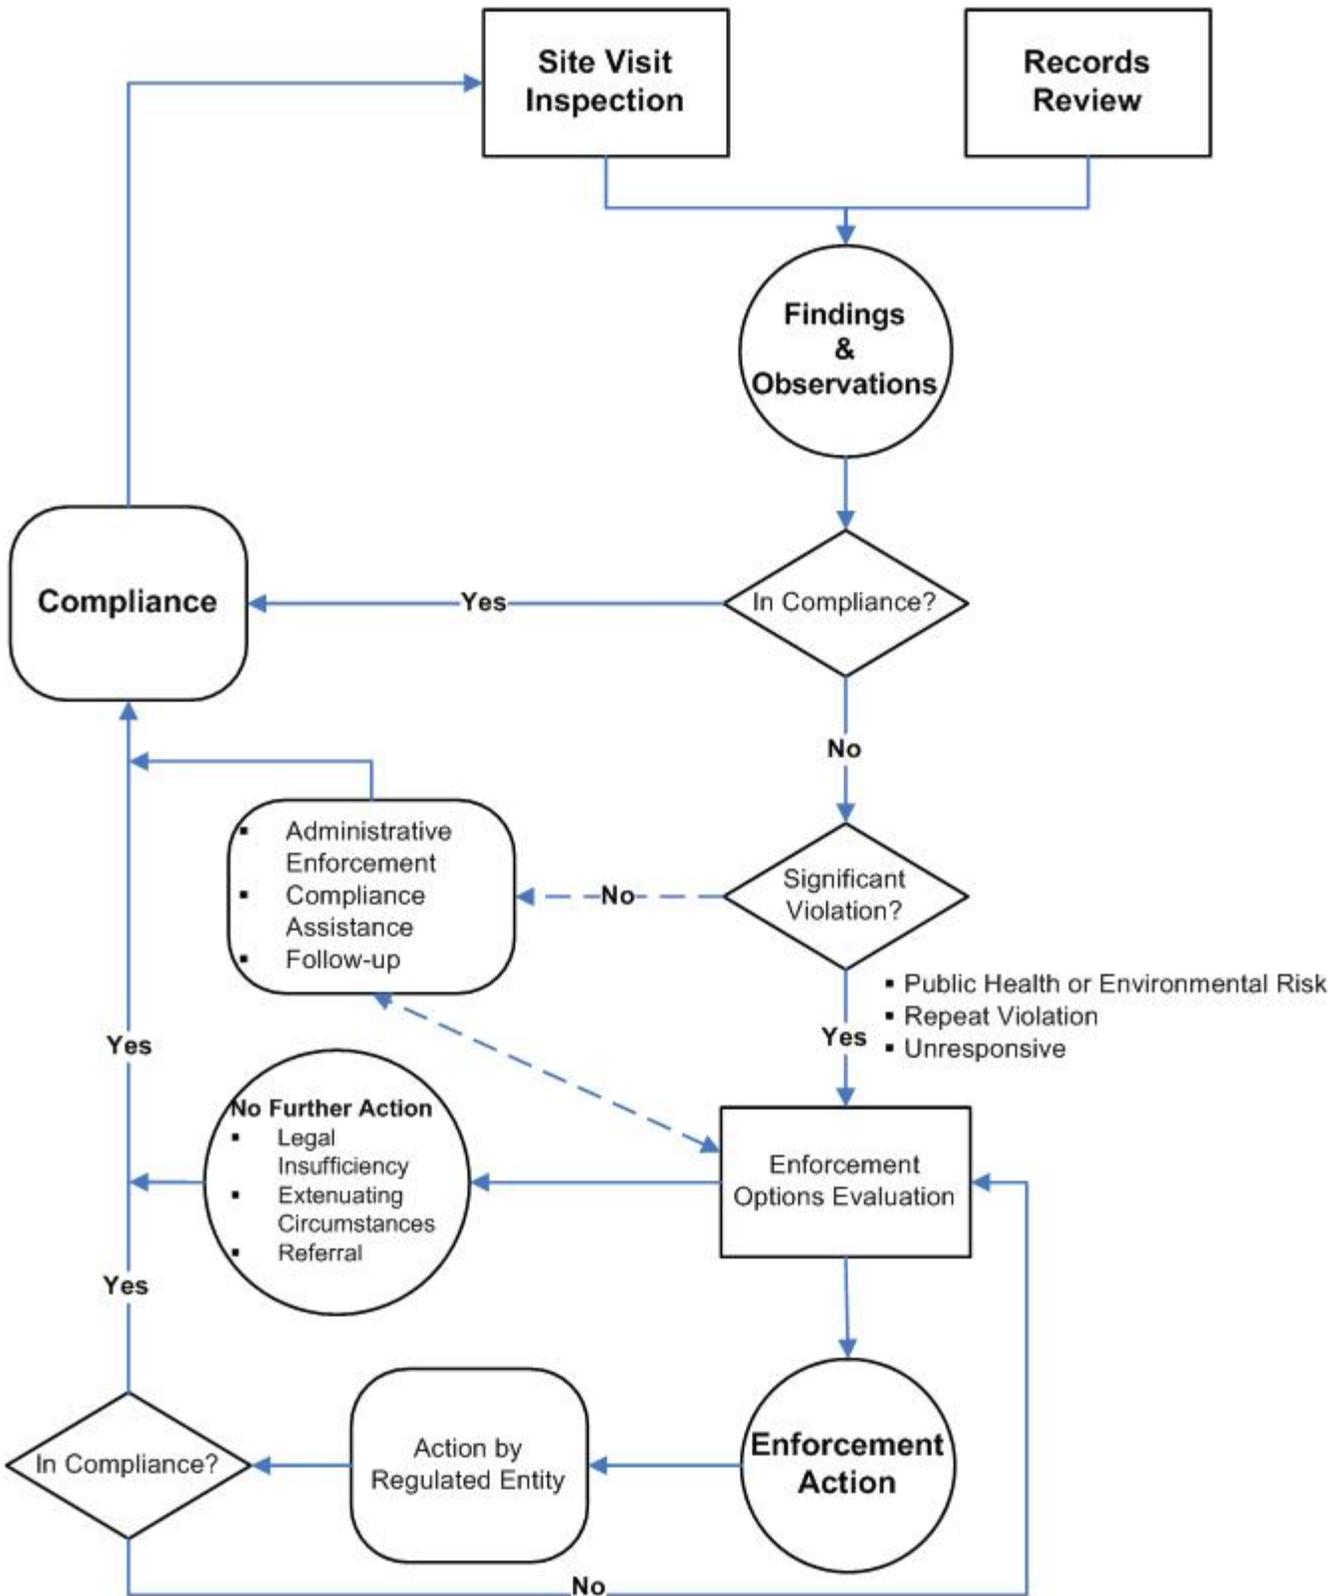

The Enforcement and Compliance Process

The enforcement and compliance processes used by MDE's air, water, and land administrations are authorized in different parts of the Environment Article and were established separately over a period of years. As a result, similar terminology may have technically different meanings for different programs. Despite technical differences, most enforcement programs share certain common functions that allow a year-to-year comparison. Most programs have inspection, monitoring, evaluation, and enforcement components.

Many programs also implement federal rules and regulations in addition to State requirements. In addition, the same individual, company, or facility may fall under the jurisdiction of several different environmental enforcement programs at the federal, state or local level.

If a minor violation such as a record-keeping or reporting error is discovered, a program may use discretion to allow the violator to correct the problem without imposing a penalty. In such cases, compliance assistance may be the most efficient method to achieve compliance with such requirements. Compliance assistance is a process that does not involve the use of a formal enforcement action and is explained in more detail on page 15. If an inspection reveals a significant violation, or if minor violations continue to recur and become a significant problem, then more enhanced actions are warranted. Such action may take the form of penalties, corrective orders, the filing of injunctions, and in some cases, criminal sanctions.

MDE ENFORCEMENT PROCESS

Supplemental Environmental Projects (SEPs)

MDE's approach to enforcement includes the use of Supplemental Environmental Projects (SEPs). SEPs are projects specifically undertaken to improve the environment by parties who are subject to penalty actions. Under certain limited circumstances, the value of the SEP is allowed by MDE to offset a portion of the penalty.

The U.S. Environmental Protection Agency encourages the use of SEPs for several reasons. First, SEPs add value to enforcement settlements because SEP dollars are spent directly on environmental projects. Second, SEPs require violators to go above and beyond technical compliance with minimum legal standards and thereby reach a higher level of environmental stewardship. Finally, and probably most importantly, SEPs are intended to achieve improvements to the environment that could not be accomplished with traditional penalties. Traditional penalties serve to punish current violations and deter future violations. SEPs accomplish those traditional purposes and provide a form of community service that improves the environment where the violation occurred.

MDE entered into three SEPs during FY 2017 with a total value of \$1,019,000. These SEPs were in the Air and Radiation Administration, the Land and Materials Administration, and the Water and Science Administration. The SEPs involved the replacement of lead-contaminated windows, electric vehicle infrastructure, producing a water quality-related conference, and other water quality projects.

Administration	Number of SEPs		Total Value of SEPs	
	2016	2017	2016	2017
Air and Radiation Administration	0	1	\$0	\$15,000
Land and Materials Administration	3	1	\$964,000	\$4,000
Water and Science Administration	3	1	\$1,358,000	\$1,000,000
TOTALS	6	3	\$2,322,000	\$1,019,000

Details about these SEPs can be found in Appendix F.

Contacts or Consultations with Businesses

Environment Article section 1-301(d) requires this report to “*include information on the type and number of contacts or consultations with businesses concerning compliance with State environmental laws.*” This section identifies the two types of contacts MDE has with businesses to assist in bringing a site into compliance and to assure future compliance: compliance assistance and other consultations.

Compliance Assistance

Compliance assistance is used by MDE as one of the many tools to educate the regulated community before violations occur and--- in the case of non-serious violations--- to bring a site into compliance and to assure future compliance. This form of contact between businesses and MDE’s inspectors is counted in the programs’ performance measures tables under the category of “*compliance assistance.*” As an element of MDE’s compliance process, an inspector renders a tangible act of compliance assistance when the inspector:

- (a) Documents a specific past or current violation which the regulated entity corrects in the absence of a formal enforcement action; or
- (b) Documents a specific action or actions which the regulated entity has the option of undertaking to prevent the likelihood of potential future violations. The action or actions are voluntarily undertaken by the regulated entity in such manner and within such time period as deemed acceptable by MDE in the absence of a formal enforcement action.

For either (a) or (b), the MDE inspector must document the manner in which the regulated entity voluntarily achieved compliance. This definition of "compliance assistance" requires the action to be measurable, and objectively verifiable by a third party. This documents MDE’s activities to keep facilities in compliance without the use of formal enforcement actions.

Consultations with Businesses

MDE provides other tools to educate businesses and other regulated entities. These include making guidance documents available, providing forms, and publishing information about new or updated requirements on MDE’s website. MDE also works with businesses before they apply for permits to explain what permits will be required for a proposed activity and the application process for the required permits. Possible compliance requirements such as sampling, reporting, and record-keeping may also be explained.

The Department’s website (<http://www.mde.maryland.gov>) provides additional information that businesses may use to determine compliance with environmental requirements:

- The Guide to Environmental Permits and Approvals provides detailed information about each of MDE’s permit programs.
- MDE has made a number of permit applications and instructions for completion available online. MDE is also working to enable businesses to submit their permit applications via the Internet.

- MDE has created an Enforcement Webpage where information can be found concerning enforcement programs and current enforcement actions: <http://www.mde.maryland.gov/AboutMDE/DepartmentalReports/Pages/AboutMDE/enfcomp.aspx>

SECTION TWO
ADMINISTRATION DETAILS

MEASURING ENFORCEMENT AND COMPLIANCE

MDE has been measuring, in a consistent fashion, the performance of its enforcement and compliance activities since 1998. This report standardizes the accomplishments of enforcement and compliance programs using metrics for the 31 enforcement areas that are the subject of this report.

Enforcement actions are taken by MDE's three media administrations:

- Air:** Includes air pollution and radiation programs.
- Land:** Includes oil control, solid and hazardous waste management, sewage sludge utilization, animal feeding operations, scrap tire recycling, lead poisoning prevention, natural wood waste recycling, coal and mineral mining, oil and gas exploration and production, and hazardous substance clean-up programs.
- Water:** Includes drinking water, tidal and non-tidal wetlands, wastewater discharges, water appropriation, waterway and floodplain construction, dam safety, stormwater management and sediment and erosion control programs.

Organization of Section Two

Section Two is divided by administration and by enforcement area/program. First, an overall administration executive summary describes the enforcement and compliance efforts during this fiscal year, followed by key performance measures for that administration. Next, the sections for each enforcement area/program include the purpose of the program, its underlying authority, its enforcement process, summary of the program's successes/challenges, the performance measures table, and three charts comparing the past three fiscal years' data on inspection coverage; number of inspections, audits, and spot checks; and number of enforcement actions.

SAMPLE PERFORMANCE MEASURES TABLE

This key table presents an accounting of each program's activity. Definitions of each measure appear below. An example of the table with the lines numbered to correspond to the following definitions follows this list of definitions.

1. *Permitted Sites/Facilities and Other Regulated Sites/Facilities: Measures of the MDE or Program workload.*

Lines 2, 3, and 5-8: Identify the total universe of facilities over which the program has regulatory responsibility.

Line 2: Shows the number of new permits or permit renewals issued during the year.

Line 3: Shows the total number of permits that were in effect at fiscal year end.

Lines 5-8: Used by those programs that have regulatory responsibility for sites, facilities, and other entities that are not required to obtain a formal permit, but still fall under MDE's regulatory oversight.

9. *Inspections and Audits: A measure of output.*

Lines 10-12: Present numbers of sites evaluated for compliance. Inspections are defined as physical visits to the site to determine compliance, whether the visit involves walking around the site or a record review at the site. An audit is a review of records or self-monitoring reports performed off-site at MDE offices. These measures are reported separately to illustrate that many important regulatory oversight activities occur off-site.

Lines 13-15: Present numbers of inspections, audits and spot checks performed. The number of inspections is often substantially higher than the number of sites (comparing lines 12 and 15) because some sites are inspected more than one time during the year, depending on the degree of risk that the regulated entity poses to the public. Also, some individual sites are sufficiently large or diverse to warrant having different portions of the site, or different pieces of equipment, inspected separately.

16. *Compliance Profile: A measure of the results accomplished.*

Lines 17-19: A snapshot of the overall compliance status of the facilities inspected during the fiscal year.

Line 17: Identifies how many of the inspected sites were found with significant violations, providing a key element used to determine the inspection compliance rate (percentage) shown on line 18. If a site was found to have a significant violation, it was counted as being out of compliance, even if the site was brought back into compliance later in the year.

Line 18: The percentage of inspected sites with significant violations. Line 17 divided by Line 10 times 100.

Line 19: The enforcement “inspection coverage rate” measure. The “inspection coverage rate” is defined as the ratio of sites inspected divided by the total number of sites or regulated entities in that program’s universe. “Sites” may include other than a single physical location since many programs have regulatory oversight responsibility for things other than facilities.

20. Significant Violations: A measure of what was found.

Lines 21 – 24: Record the total number and nature of the significant violations the program identified during the fiscal year. The specific definition of what constitutes a **significant** violation is determined by individual programs that have unique statutory and regulatory threshold requirements. MDE’s general definition of a significant violation is any violation that requires MDE to take some form of remedial or enforcement action to bring the facility into compliance. MDE’s Penalty Policy further clarifies this definition and can be found in Appendix E.

Line 21: Indicates how many significant violations resulted in an environmental or health impact.

Line 22: Counts how many significant violations were technical/preventative in nature. The distinction here is based on evidence or proof that MDE must present to establish the violation in a contested case.

- Cases that include evidence of actual physical damage to the environment or to a human being, such as samples, photographs, or direct observations, are counted as having an environmental or health impact.
- Cases in which documentary evidence, such as falsified discharge monitoring reports, lack of permits or failure to maintain records, are counted as technical/preventative on line 22.
- The distinction between physical and technical violations is made to avoid the misperception that all violations involve pollution or immediately endanger human health.
- Either environmental/health violations or technical/preventative violations can be considered significant or non-significant depending on the circumstances of the violations.

Line 23: Accounts for the number of significant violations carried over from last year. Note that for some programs this will not match the number of ongoing from the previous year’s report. This is due updates in the database used for reporting that occur after the data is collected for this report. For these programs the number reported is what is in the database when the data for the report is collected.

Line 24: The sum of lines 21 through 23, the total number of significant violations the program attempted to resolve during the fiscal year.

25. Disposition of Significant Violations: What is the status?

Lines 26 and 27: Answer the question of how many enforcement responses were concluded for significant violations in the fiscal year and how many are going to be carried over to next year.

- Resolved means that (1) an enforcement action or compliance assistance has been taken, and (2) the violator either has completed any required corrective action or has an executed agreement to take the corrective action and has begun bringing the site back into compliance.
- An ongoing enforcement response is one that is still in process and the site or violator has not taken adequate steps to correct the violation. Cases remain ongoing if the violator does not respond to MDE's initial violation notification; hearings have been scheduled and not yet held; or the hearing is complete and the violator has chosen to appeal the order. "Ongoing" enforcement responses are those not yet finished.

28. Enforcement Actions and Penalties: What are the tools MDE uses to bring about compliance?

Lines 29 – 36: MDE has a number of different enforcement tools that can be used to achieve compliance.

Line 29: Captures how often the program used **compliance assistance**.

- Compliance assistance is rendered when written documentation states that the correction has been made or commenced. This number does not necessarily correspond to the number of significant violations found because potential problems, which have not yet become violations, when corrected and documented, are counted as compliance assistance.
- Using compliance assistance allows MDE to bring facilities into compliance and to assure future compliance. This first step in a process may turn into an enforcement action if violations are uncorrected or environmental harm is threatened. It is often implemented in less time and may reduce the environmental consequences of the violation.

Lines 30 through 32: Cover specific types of enforcement actions required to be reported under Environment Article Section 1-301(d). These are broken down into administrative and civil/judicial.

Line 33: The number of penalty actions and other enforcement actions not specifically designated above. These actions are primarily penalty actions, but they also include various forms of remedial requirements that do not fit the descriptions of the actions named in the statute.

Line 34: How often the program referred a matter to the Environmental Crimes Unit of the Attorney General's Office for possible criminal prosecution. These referrals are not

counted as resolved until there is a completed criminal case or the Crimes Unit has declined to take a criminal action, returned the case to the program and the program has taken an alternative form of enforcement.

Line 36: The amount of administrative or civil penalties obtained, monies collected during the fiscal year. The penalties recorded may have been imposed in prior years, but are collected in whole or in part during the reporting year.

AIR AND RADIATION ADMINISTRATION

Air and Radiation Administration

Executive Summary

The Air and Radiation Administration (ARA) conducts enforcement and compliance activities in three programmatic areas: air quality, asbestos, and radiation.

The Air Quality Compliance Program devotes a significant portion of its capacity to ensuring compliance at approximately 600 high-impact sources. This category includes facilities such as power plants, incinerators, and large industrial operations. In addition to on-site inspections, compliance staff reviews report submittals, stack test results, sampling results, and continuous monitoring summaries to assess compliance at regulated facilities.

The low-impact facilities category is one in which only a small percentage of sources are inspected. This is due to the large numbers of these sources and the relatively low impact of any particular violation. This category includes sources such as paint spray booths, dry cleaners, emergency generators, and gas stations.

The Air Quality Compliance Program received over 400 air quality complaints in FY 2017. The Program responds to all complaints by telephone and, based on the nature of the complaint, identifies and places priority on those that require a field inspection. Some complaint situations may need multiple follow-up inspections to address the concerns of the complainants and to ensure compliance with air quality requirements.

In the Asbestos Division, contractors intending to abate asbestos are required to notify MDE. MDE inspects as many of these projects as possible, generally focusing on the more substantial projects. Some demolition projects are also inspected. The number of asbestos notifications received in FY 2017 was 2,835.

The Radiological Health Program (RHP) regulates both electronic sources of radiation and materials that are radioactive to prevent the general public and occupational workers from receiving any unnecessary exposure to radiation. Also, RHP is the primary State responder to public hazards involving radioactive materials, such as transportation incidents or a nuclear utility accident.

The Radiation Machines Division continues to implement the requirement for x-ray machine owners to conduct maintenance on a prescribed regular basis. X-ray machine owners are required to submit the maintenance reports to the Division where they are reviewed for possible compliance issues.

The Radioactive Materials Licensing and Compliance Division continues to maintain focus on implementing, through the licensing and inspection process, increased security controls for those licensees with sufficient quantities and types of radioactive materials. Other priorities include the evaluation of the radiation safety and engineering aspects of a sealed source medical device prior to allowing its use and sale across the nation, training of state and local personnel to assure statewide preparedness for a nuclear utility accident, and

assistance in statewide implementation of a preventive radiological nuclear detection system.

Ambient Air Quality Control

PURPOSE

There are approximately 12,000 stationary sources of air emissions registered in Maryland. The Air Quality Compliance Program is responsible for ensuring that these sources comply with applicable air pollution control requirements. Approximately 200 of these sources emit more than 95% of all the pollutants emitted from stationary sources. These 200 high-emitting sources and an additional 400 or so priority sources receive a high level of scrutiny. The additional priority sources are selected due to concerns regarding potential emissions, toxic air pollutant emissions, potential for nuisance impact, impact on the general welfare, or the potential for significant risk to public health or the environment. This group of approximately 600 sources includes facilities such as power plants, large industrial operations, manufacturing plants, asphalt plants, and incinerators. This group varies slightly in number from year to year due to start-up of new sources, shut-down of existing sources, or sources reducing emissions or using less toxic materials to the point where they are no longer considered priority sources and thus do not demand close scrutiny. The remainder of the 12,000 sources are generally smaller in terms of their emissions or their impacts and are considered to be of lesser risk to public health or the environment. Examples of these smaller sources include dry cleaning operations, gas stations, charbroilers, small boilers, paint spray booths, and degreasing machines. For this reason, performance measures information is presented in two categories, *High-Impact Air Emission Facilities* and *Low-Impact Air Emission Facilities*.

AUTHORITY

FEDERAL: Clean Air Act, Title I, Section 110

STATE: Environment Article, Title 2; COMAR 26.11

PROCESS

In inspecting facilities, a major focus is given to those approximately 600 sources described above that are considered a potential significant risk to public health or the environment. Often, multiple inspections are performed at these sources over the course of a year. Inspections are both announced and unannounced, depending on the nature and purpose of the inspection. Attention is given to smaller, lower-risk sources through special initiatives that may focus on inspecting all sources within a particular source category, spot checks of a percentage of sources in a category where the category contains a large number of small sources, and the education of trade groups and equipment operators and owners.

SUCCESSSES/CHALLENGES

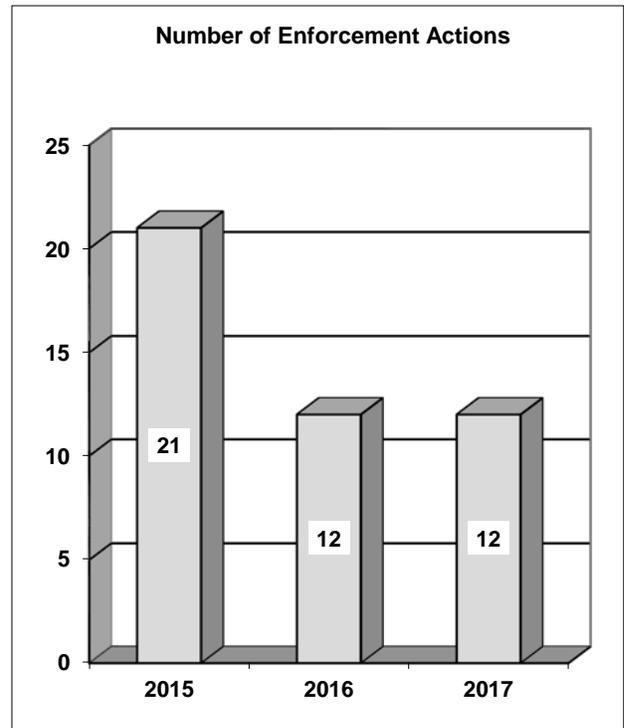

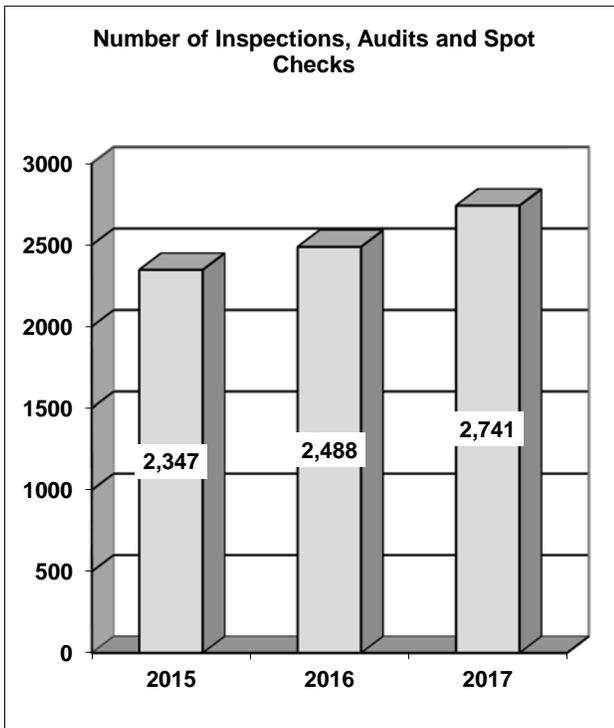

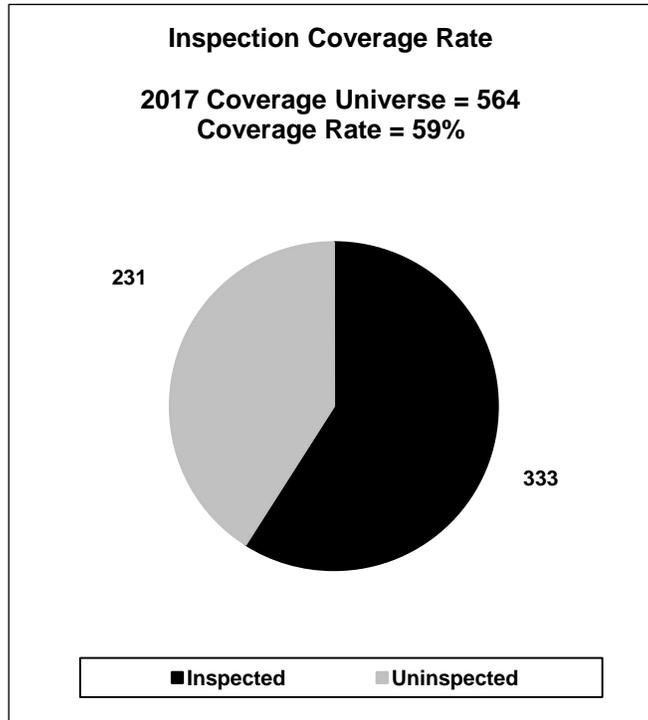

Ensuring compliance at high-impact sources continues to be the focus of the Program's resources, and this focused attention contributes to the high compliance rate for this category. In addition to on-site inspections, the Program reviews compliance certifications, report submittals, stack test results, sampling results, and continuous monitoring summaries to assess compliance at regulated facilities.

Ambient Air Quality Control Low-Impact Facilities

Air Quality Complaints

PURPOSE

In addition to the almost 12,000 registered or permitted sources of air emissions in Maryland, there are numerous potential sources of air pollution that are not required to be registered or permitted by the Department. Examples include some composting operations, construction sites, open burning activities, hot-tar roofing operations, material storage piles, welding and burning activities, and certain portable operations of short duration. These sites or activities can create nuisance conditions such as odors or fugitive dust. The Air Quality Compliance Program responds to complaints regarding nuisance odors and dust from both permitted and non-permitted operations.

AUTHORITY

STATE: Environment Article, Title 2; COMAR 26.11

PROCESS

Complaints are addressed in a number of ways depending on the nature of the complaint. A complaint situation may be of sufficient severity to warrant an immediate site visit. Complaints arising from severe nuisance situations generally result in the Department receiving multiple and separate complaints for a single situation. A complaint situation can also be a sporadic occurrence, which may lead to increased surveillance of a site in an attempt to verify the existence of a problem, which may lead to a formal inspection. Some complaints, particularly where only an explanation of what is allowed is needed, can be resolved through phone contact or letters.

If the complaint investigation reveals a violation at a permitted site, the violation and subsequent enforcement action is counted under the ambient air quality control program's performance measures chart. Only those violations that occur at non-permitted sites are counted here; most violations in this category are related to open burning activities or the creation of off-site nuisances caused by odors or dust from sites. Violations such as these rarely result in actual harm, but have the potential to cause harm to the environment or public health, and on this basis are included in this report. Nearly all violations in this program are resolved without the need to take enforcement action, as they generally relate to short-lived activities, are quickly corrected (often at the time of inspection), do not reoccur, and result in no actual harm to public health or the environment.

SUCCESSES /CHALLENGES

The Air Quality Compliance Program received over 400 complaints in FY 2017. The Program responds to all complaints by telephone, prioritizing those that merit a field inspection. Some complaint situations need multiple follow-up inspections to ensure compliance with air quality requirements. Based on their nature, some complaints at non-permitted sites may need follow-up enforcement action to achieve compliance.

*This line includes responses to complaints at permitted sites and unregistered/unpermitted sites and is used to calculate the coverage rate for complaints. The inspections and any enforcement actions at any permitted sites are captured in the sections for registered sources.

Air Quality Complaints

Asbestos

PURPOSE

The Air Quality Compliance Program's Asbestos Division manages the licensing of asbestos removal contractors and oversees their efforts when removing or encapsulating asbestos to ensure that asbestos is handled in a manner that is protective of human health. Any project that involves demolition or the removal of more than 240 linear feet or more than 160 square feet of asbestos-containing material is subject to federal standards under EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP) program. All projects are subject to additional requirements under state laws and regulations. Projects can range from something as small as a single pipe wrapping to a major removal project at a power plant or other large facility.

AUTHORITY

FEDERAL: Clean Air Act, Title 1, Section 112

STATE: Environment Article, Title 6, Subtitle 4; COMAR 26.11.21

PROCESS

Removing or encapsulating asbestos is required to be done by a contractor licensed by MDE. The contractor is required to notify the Division of the location of the activity and the approximate amount of asbestos-containing material to be removed or encapsulated prior to undertaking the work. From the information contained in the notification, the Division will determine whether the project is required to meet federal standards. About a quarter of all asbestos projects undertaken are subject to federal program requirements. Projects subject to such requirements are considered a priority and an inspection will generally take place. Priority is also given to inspecting contractors with poor performance records, projects in close proximity to other priority projects (for inspection efficiency) and projects for which complaints have been lodged. The focus of an inspection is on determining whether a contractor is adhering to the standards designed to protect workers and the public from exposure to asbestos. Some sites, such as demolition sites, where no notification has occurred but where asbestos may be encountered, are also inspected.

INSPECTION COVERAGE RATE

The inspection coverage rate is computed as the number of sites inspected divided by the number of notifications received. Note that the Division receives notifications for any amount of asbestos that is disturbed. This will include notifications for one to two feet of removal in which the project will last for maybe two hours, to notification for thousands of linear and square feet, in which the project may last up to twelve months. State law governs the notification process for small projects, and requires only that the contractor notify the Department before the project begins. The larger projects are governed by federal requirements, and the contractor is required to notify at least ten days prior to beginning the project. It is more likely that an inspection will take place at a site where removal will last a day or more. The Division is required by state law to annually inspect at least one asbestos removal project by each contractor. The Division meets this requirement.

SUCSESSES/CHALLENGES

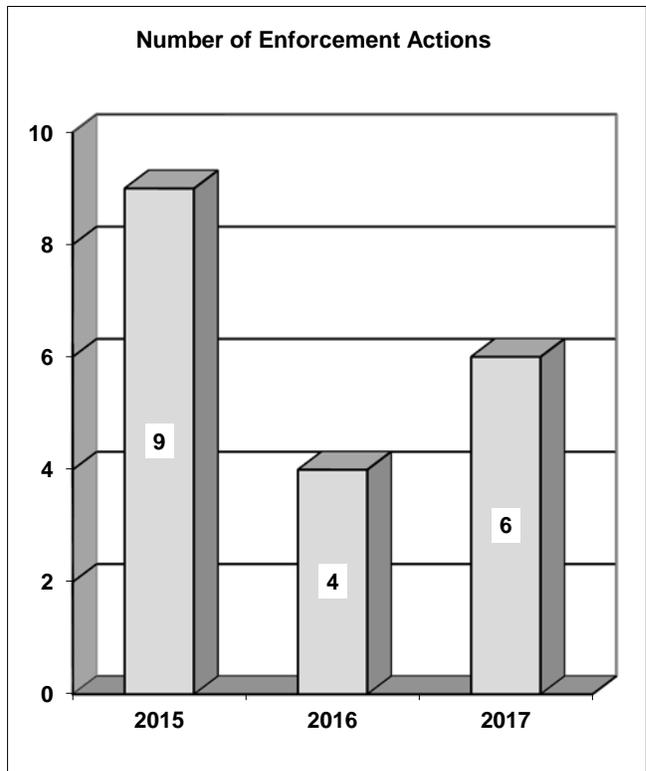

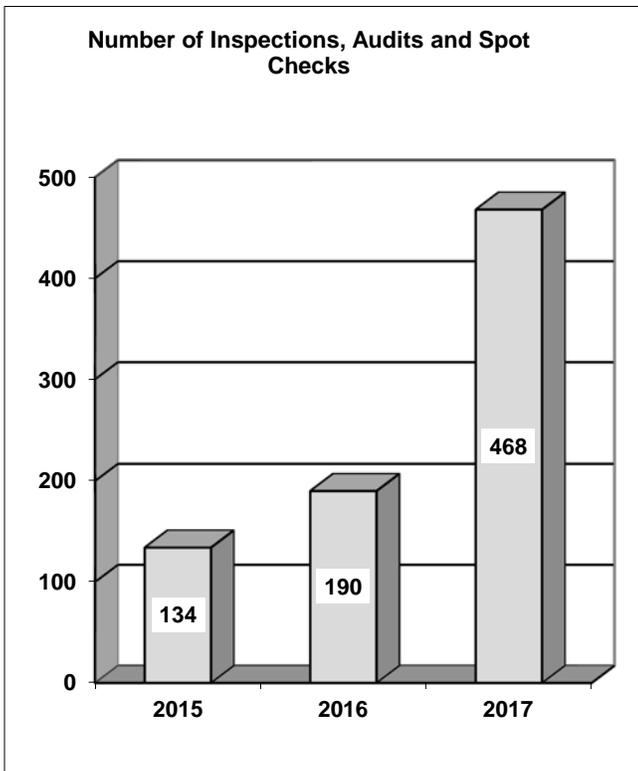

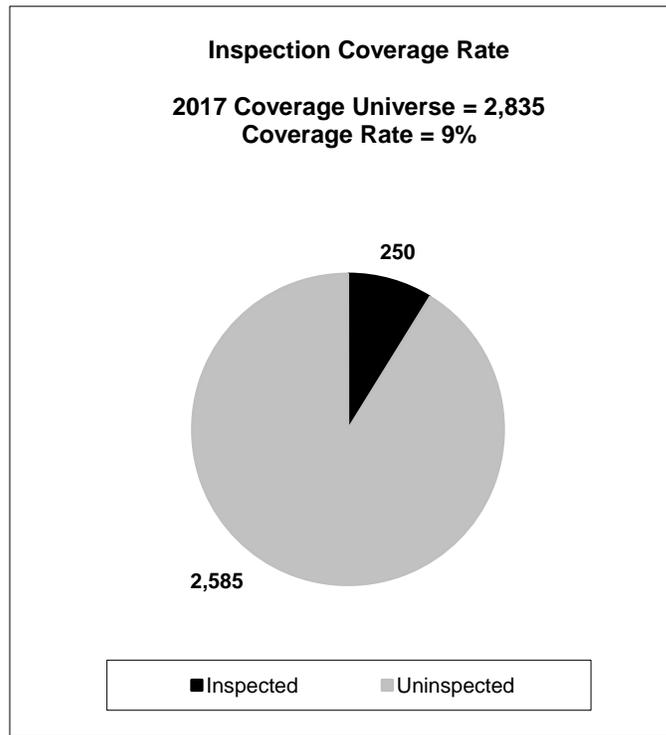

Contractors intending to abate asbestos are required to notify MDE. MDE generally inspects projects focusing on the more substantial projects. In FY 2017, the Asbestos Division inspected about 9% of sites that provided notification to MDE.

In FY 2017, inspection staff spent time administering the asbestos testing. MDE is seeking a third party test administrator to run the test so the staff can dedicate their time to inspections.

Asbestos

Performance Measure	TOTAL

Asbestos

Radiation Machines Division

PURPOSE

The Radiation Machines Division (RMD) regulates manufactured electronic sources of radiation to minimize the amount of unnecessary radiation exposure received by the general public and machine operators. These electronic radiation sources include dental and veterinary x-ray machines, mammography (breast imaging) machines, diagnostic and therapeutic radiation machines, security screening devices and other electronic radiation devices used in research or industry.

State regulations, which derive in part from U.S. Food and Drug Administration (FDA) statutory and regulatory directives, require that all radiation exposures be “As Low As Reasonably Achievable” (ALARA). Radiation exposure can cause adverse health effects, with risk that varies depending upon the amount of radiation received, frequency of radiation exposures, and radio-sensitivity of body parts. Although the medical benefits of radiologic diagnostic and therapeutic treatment procedures far outweigh potential risks of sustained biological damage, evidence suggests that cells in the human body can be damaged by numerous small exposures over time and that these multiple exposures have a cumulative health effect that may be as detrimental as receiving a single large exposure. Due to the increased use of radiation for diagnostic and therapeutic procedures, there continues to be a growing awareness of the impacts on human health from radiation machines. To some degree, x-ray imaging has replaced procedures that do not require radiation, such as ultrasound or magnetic resonance imaging, causing the general public to have an increased level of radiation exposure.

AUTHORITY

FEDERAL: Radiation Control for Health and Safety Act of 1968, 21CFR1000;
Mammography Quality Standards Act; 21CFR900

STATE: Environment Article, Title 8 “Radiation”;
COMAR 26.12. Radiation Management

PROCESS

The RMD ensures all radiation machine facilities are inspected on cycles required by statute, regulation, administrative policy, or contract. Note that mammography inspection reports are provided to the FDA for follow-up enforcement actions, but the FDA’s response actions are not included in this report.

Dental, veterinary, and mammography facilities are required to renew the radiation machine facility registration of their x-ray equipment every two years. Facilities with x-ray machines subject to certification are required to renew the radiation machine facility registration on the same schedule as the certification inspection frequency presented in the chart shown later below.

SUCSESSES/CHALLENGES

Successes in FY 2017 include the continued high rate of compliance for medical, veterinary, and mammography facilities. A contributing factor to the high compliance rate is that radiation machine facilities are required to have preventive maintenance performed on their radiation machines at the interval recommended by the manufacturer for each machine. If an interval is not specified, the maintenance must be performed every 12 months. For a radiation machine, the potential consequence of failure to perform recommended maintenance is greater radiation exposure than clinically necessary to patients and occupational workers. Facility compliance with preventive maintenance requirements is maintained through compliance assistance and enforcement, as appropriate.

Regulated facilities have the capability to submit documents electronically, which allows for a more efficient and timely method of documents.

The chart below shows the types of facilities regulated and the frequency at which they are inspected. Note that the words machine and tube are used interchangeably.

Facility Type	Registered X-ray Tubes*	Inspection Frequency
High Energy & Particle Accelerators	2 facilities, 2 certified tubes	Annual
Medical (Therapy) Accelerators	44 facilities, 114 certified tubes	Annual
Hospitals	59 facilities, 1,272 certified tubes	Biennial
Physicians: Chiropractic, MD, GP, Podiatric	1,273 facilities, 2,474 certified tubes	Biennial
Industrial	336 facilities, 768 certified tubes	Triennial
Dental	2,801 facilities, 10,329 tubes	Triennial
Veterinary	644 facilities, 708 tubes	Triennial
Mammography	135 facilities, 212 tubes	Annual

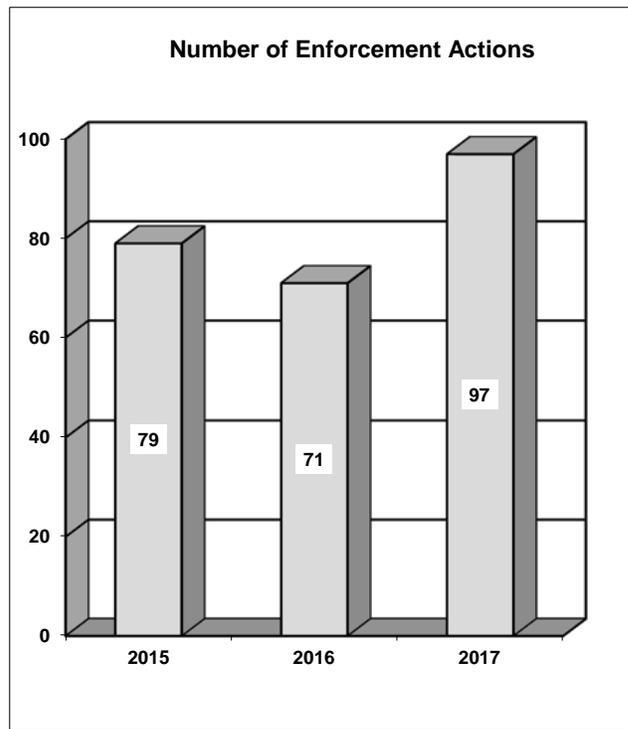

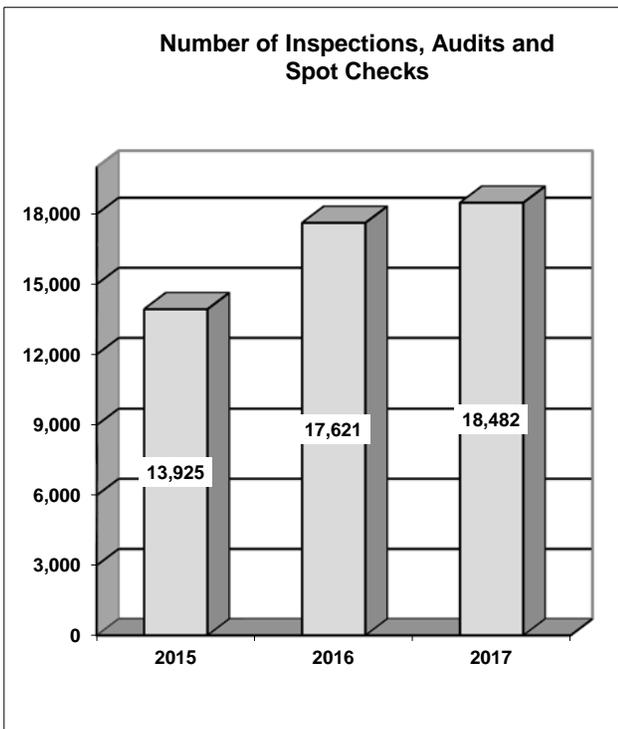

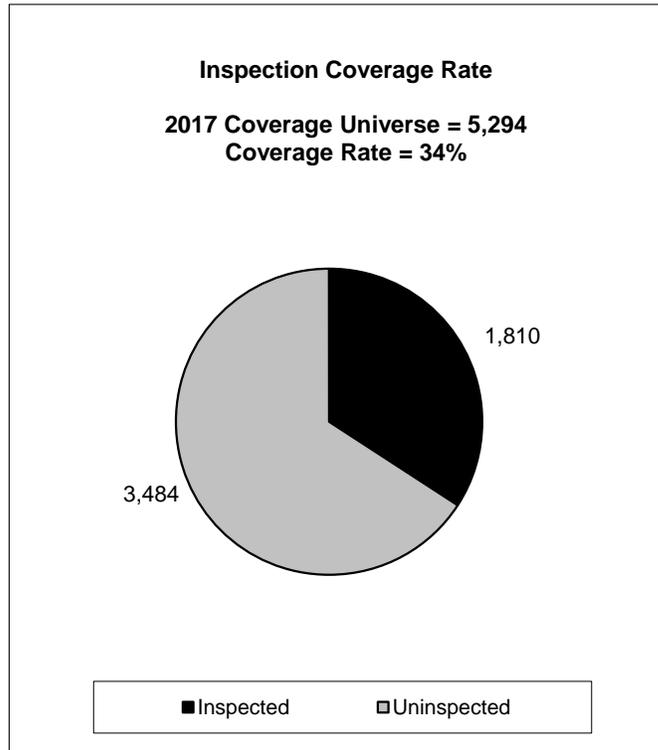

*Code of Maryland Regulations (COMAR) 26.12.03 states that "Radiation Machine" means a device that is capable of producing radiation. On any radiation-producing equipment with more than one x-ray tube, or other single point from which radiation may be emitted, each x-ray tube or radiation emission point is considered a separate radiation machine. "Tube" is defined in COMAR 26.12.01.01 as an x-ray tube or other single point from which radiation may be emitted.

Radiation Machines

* Coverage is computed as the number of sites inspected divided by the sum of the number of facility registrations, the number of registered service providers, and the number of licensed private inspectors.

Radiation Machines

Radioactive Materials Licensing and Compliance

PURPOSE

The Radioactive Materials Licensing and Compliance Division (RAMLCD) regulates the use, handling and control of radioisotopes at hospitals, cancer treatment facilities, diagnostic imaging centers, private medical practices, industrial irradiators, engineering firms, research laboratories, academic institutions, nuclear pharmacies, and manufacturers and distributors of sealed sources and devices (SS&D) in accordance with U.S. Nuclear Regulatory Commission(NRC) guidance and criteria. Regulation is accomplished through the issuance of licenses and through inspection of the licensees and serves to protect the health and safety of radiation workers and the general public. Facility radiation safety programs and authorized activities are evaluated during the licensing and inspection process to ensure compliance with Maryland Regulations for the Control of Ionizing Radiation in such areas as radiation safety, security, storage and control, transportation, disposal, training of personnel, possession of protective devices, and control of radiation hazards. The RAMLCD also regulates companies licensed in other jurisdictions that use radioactive material in Maryland under the terms and conditions of reciprocal recognition. The RAMLCD is the primary State responder to radiological events such as transportation incidents, loss of control and theft of radioactive material in Maryland. The RAMLCD also provides radiological technical input and coordination for statewide emergency preparedness in the areas of shipment of high level radioactive waste through Maryland; increased security at certain types of facilities possessing high risk radioactive material, facilitation of training of local responders to radiation emergencies and assistance in the evaluation, coordination, and implementation of policies and procedures for preventive radiological nuclear detection. The RAMLCD performs engineering and radiation safety evaluations of the ability of sealed sources and devices to safely contain radioactivity under the conditions of use for sealed sources and devices manufactured in Maryland. These evaluations are summarized in registrations that are maintained by the NRC in the National Sealed Source and Device Registry. General Licenses are used to regulate low strength radiation devices that have inherent safety features. Such licenses are issued by the manufacturer and registered with the RAMLCD. The RAMLCD monitors and tracks the transfer and disposal of these generally licensed devices.

AUTHORITY

FEDERAL: Atomic Energy Act of 1954, as amended;
10 CFR (Nuclear Regulatory Commission) Parts 1-171

STATE: Environment Article, Title 8; "Radiation";
COMAR 26.12. Radiation Management

PROCESS

The RAMLCD issues licenses with a seven-year term for approximately 50 types of radioactive material uses. The RAMLCD inspects facilities for compliance with radiation regulations and adherence to license conditions and radiation safety procedures and practices. Inspections are performed by one inspector or a team of inspectors at a frequency based on the quantity, activity and toxicity of the material, the potential hazard resulting from the use, and the nature of the operation. Inspection frequency ranges from

annual to every five years. When violations occur, corrective actions are required and verified. RAMLCD also conducts investigations throughout Maryland in response to incidents and allegations. The RAMLCD also oversees the decommissioning of previously-licensed facilities, conducts safety evaluations on sources and devices, and performs pre-licensing visits to all applicants prior to the issuance of a new license. Additionally, the RAMLCD performs inspections on at least 25% of the most hazardous radiation operations conducted in Maryland by out-of-state radioactive material licensees under reciprocal recognition of their licenses. RAMLCD maintains an equipped and trained radiological emergency response team with a mission to respond on a 24/7 basis to radiological emergencies in the public domain and to provide technical assistance to local law enforcement and emergency responders.

SUCCESSSES/CHALLENGES

Successes in FY 2017 include maintaining an adequate and compatible Radioactive Materials Program in accordance with NRC criteria, continued implementation of the State's Preventive Radiological Nuclear Detection activities and maintenance of response capabilities, the full implementation of federally mandated radioactive material security regulations for licensee's with high risk sources and the continuation of training of State and local personnel to ensure statewide preparedness for a nuclear utility accident. The RAMLCD, with the assistance of the U.S. Department of Energy's National Nuclear Security Administration, continues to remove large quantities of unwanted radioactive material from the state in the effort to eliminate potential security threats. Furthermore, the RAMLCD licensed the first GammaPod, a new high-precision, image-guided radiation therapy system specifically designed to treat early-stage breast cancer. The license has enabled clinical trials to begin at the University of Maryland Medical Center. The GammaPod has the potential to significantly shorten the treatment time to a few sessions over the course of a week and, in the future, potentially eliminate the need for surgery in select patients. In parallel, the RAMLCD completed the Sealed Source Device Registration of the GammaPod that will enable the manufacturer to fabricate and distribute this device from their Maryland facility.

INSPECTION COVERAGE RATE

The following chart shows the inspection frequency, the number of licenses that are inspected at that frequency, and an example of the type of licenses:

Inspection Frequency	Number of Licenses	Examples of License Types
Annual	4	Gamma Knife (cancer therapy) Gamma Pod (breast cancer therapy) Industrial Radiography
2 Years	46	Manufacturing and Distribution Panoramic Irradiators Medical Research Nuclear Pharmacies Remote Afterloader (cancer therapy)
3 Years	130	Self Shielded Irradiators Hospitals and Medical Facilities Brachytherapy (cancer therapy) Mobile Nuclear Medicine Academic Research
5 Years	350	Portable and Fixed Nuclear Gauges Diagnostic Nuclear Medicine Research Laboratories General License Distribution

Notes for above table:

Licenses inspected in the annual, two-year and three-year inspection frequencies are the most complex and represent those types of radioactive material activities with the greatest radiation hazards to users and members of the general public.

LAND AND MATERIALS ADMINISTRATION

Land and Materials Administration

Executive Summary

The Land and Materials Administration's (LMA's) mission is to protect human health and preserve and restore land and water resources. LMA works to reduce the quantity and toxicity of generated wastes through recycling and source reduction, ensures the control and proper disposal of waste, manages lead paint compliance activities, assures that oil is handled in an environmentally-safe manner, and oversees the remediation of contaminated sites for viable economic development. This mission is achieved by maintaining a highly visible presence in the regulated community, providing assistance to stakeholders, and developing long-term strategies for waste management needs.

FY 2016 was the final year for a separate inspection program for the handling of mercury containing automotive switches by the Resource Management Program. Going forward, mercury switch inspections will only be performed in conjunction with scrap tire inspections. Facilities that fall under the scope of Maryland's mercury switch recovery program are still required to remove mercury switches from end-of-life vehicles in compliance with the requirements of the program. Maryland's Mercury Switch Law sunsets on December 31, 2017.

Overall in FY 2017, LMA issued 2,942 permits/registrations compared to 2,856 in FY 2016. This is an increase of 86 permits/registrations. The total permits/registrations in effect at the end of FY 2017 also increased to 9,760 from 9,409 in FY 2016. The Lead Poisoning Prevention Program saw an increase of accreditations due to the increase demand from property owners to obtain a lead free certificate.

The number of other regulated sites for LMA decreased in FY 2017 by 17,827. There were 154,599 other sites regulated in FY 2017 compared to 172,426 in FY 2016. The biggest impact resulted from a project started in FY 2016 by TSOP to correct the Universe of Rental Properties. A large number of properties were removed from the Universe due to properties being certified as lead free, forfeited/bankrupt, sold, or no longer offered for rent. The removal of these properties resulted in a decrease of 17,725 properties. In FY 2017, the Universe of Rental Properties was 135,658 compared to 153,383 in FY 2016.

The total number of sites inspected in LMA decreased to 61,213 in FY 2017 from 62,550 in FY 2016. The decrease of 1,337 sites inspected in LMA was mainly due to a decrease in Lead Poisoning Prevention Program inspections. The majority of LMA programs saw an increase site inspected in FY 2017. The Electronics Recycling Program conducted 103 more inspections resulting in 450 retailers being inspected in FY 2017 compared to 347 in FY 2016.

The number of sites audited but not inspected decreased to 2,205 in FY 2017 for LMA compared to 2,221 in FY 2016. This was a slight decrease of 16 audits. The Scrap Tire Unit changed their priorities in FY 2017 to focus on issuing registrations and cleaning of stockpiles of scrap tires which resulted in a decrease in sites being audited but not inspected and the number of audits conducted.

The number of inspections, audits and spot checks performed in LMA decreased by 3,681 in FY 2017 to 75,510 from 79,191 in FY 2016. The Non-Coal Program in Mining saw a significant decrease in FY 2017 of 740 inspections, audits, and spot checks. A new policy in the Non-Coal Mining Program on how inspections, audits and spots checks are performed and tracked,

in conjunction with a focus on the renewal of the five year permit term contributed to the decrease.

Enforcement actions decreased in FY 2017 by 5,932, mainly due to the Lead Rental Registry Section. In FY 2017, the Section only issued enforcement actions for failure to register units during one calendar year (2016) versus three calendar years (2013, 2014 and 2015) in FY 2016. The Animal Feed Operations Division saw an increase of 51 enforcement actions in FY 2017 for failure to submit or submission of an incomplete Notice of Intent.

In FY 2017, LMA collected \$1,143,746 in penalties, which was a 50 percent decrease from FY 2016. The majority of the penalty reduction is likely a result of TSOP issuing violations for failure to register units for one calendar year in FY 2017, versus three calendar years in FY 2016.

The Scrap Tire Program continues to remove scrap tires from illegal stockpiles across Maryland. In FY 2017, over 191,120 scrap tires were removed from 52 sites. Since the inception of the Scrap Tire Program in 1992, over 10.8 million scrap tires have been removed from 1,082 stockpiles. There are approximately 336,426 tires remaining to be cleaned up at 53 sites. The cleanup of the 200,000 tires discovered in FY 2016 will continue into FY 2018.

In the Lead Poisoning Prevention Program, there was a slight decrease in the percentage of children with blood lead levels equal to or greater than 10 micrograms per deciliter (µg/dL).

Land Restoration Program

PURPOSE

The Land Restoration Program (LRP) protects public health and the environment by identifying sites that are, or potentially are, contaminated by controlled hazardous substances (CHS). Until 1997, Maryland placed sites where hazardous substances were released, or possibly released, on the State Master List and in the Disposal Site Registry. The sites were prioritized for remedial activities. Starting in 2013, the State Master List was revised and renamed. Newly identified sites are now recorded on the Brownfield Master Inventory (BMI) List - Active Sites (Appendix H) or the Brownfield Master Inventory List - Archive Sites (Appendix I). The Brownfield Master Inventory List is available on the Department's website at:

<http://www.mde.maryland.gov/programs/Land/MarylandBrownfieldVCP/Pages/BrownfieldMasterInventory.aspx>

AUTHORITY

FEDERAL: Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)

STATE: Environment Article, Title 7, Subtitle 2; COMAR 26.14

PROCESS

The LRP conducts and/or oversees environmental assessment and cleanup projects in Maryland. The assessment activities include investigating and sampling sites to determine whether cleanup is necessary. If the identified contamination is determined to represent a risk to public health or the environment, remedial activities are conducted to address the sites contaminated by controlled hazardous substances. Assessments and cleanups are conducted based on available resources. The Disposal Site Registry includes all the sites for which the State performed a preliminary site assessment and determined hazardous waste is present. For these sites, State funds may be used to conduct remedial action as no viable responsible party has been identified. This list is updated annually. The Disposal Site Registry includes all the information and ranking set forth in Title 7-233(f)(2).

SUCSESSES/CHALLENGES

The LRP maintains a list of potential hazardous waste sites in the State. Before the development of the Brownfield Master Inventory (BMI) in 2013, this list was known as the "State Master List." It included properties known by the State to be contaminated or potentially contaminated and included sites on the federal Compensation and Liability Information System (CERCLIS) and on EPA's Archive list. This list included sites that met the brownfields definition. The LRP also maintained a Site-Specific Assessments list, otherwise known as the State "Non-Master List" of sites.

The current BMI list serves as the tool for tracking new and closed sites. As of June 30, 2017, there were 1,130 active sites and 1,058 archived sites on the BMI list, which includes Voluntary Cleanup Program sites; sites assessed using federal grant funding; formerly used defense facilities; assessment and cleanup activities at sites subject to the CHS Response Plan; and sites identified as being impacted by CHS but subject to other regulatory

authorities such as the federal Corrective Action Program, the federal Toxic Substances Control Act, or Maryland's Solid Waste Program.

The LRP is continuing to work with EPA on seven active, private National Priority List (NPL) sites and one site that is being managed under the EPA's Superfund Alternative Site Initiative, which allows the Responsible Party to implement a NPL-caliber remediation without NPL listing. The Program is also addressing ten Federal NPL sites, produced five federally-funded Pre-CERCLIS Screening Reports, conducted two preliminary assessments, and one site investigation during FY 2017.

Hazardous Waste

PURPOSE

The federal Resource Conservation and Recovery Act (RCRA) established a national program of hazardous waste management. The Maryland Department of the Environment has been granted authorization by the U.S. Environmental Protection Agency (EPA) to be the primary implementer of most elements of the federal hazardous waste regulatory program in Maryland. Regulations govern management of hazardous waste from the point of initial generation through its final disposition by reuse, recycling, treatment, or disposal. Maryland's regulatory program includes elements that are more stringent and broader in scope than the federal program. Important elements of this regulatory program include the following:

- identification and tracking of hazardous waste handlers (generators, transporters, and operators of permitted facilities) through issuance of identification numbers and maintenance of a related database;
- detailed standards for hazardous waste management;
- tracking shipments of hazardous waste from generation to disposal through the hazardous waste manifest system;
- certification of transporters of hazardous waste;
- tracking waste generation and management through a biennial reporting requirement; a permitting program requiring permits for persons who treat hazardous waste, store hazardous waste for periods of time longer than 90 days, operate a hazardous waste disposal unit, or maintain a closed hazardous waste disposal unit; and
- compliance evaluation to assess compliance with applicable requirements, and institute enforcement actions and corrective measures as necessary.

AUTHORITY

FEDERAL: Resource Conservation and Recovery Act (RCRA) - Subtitle C

STATE: Environment Article, Title 7, Subtitle 2; COMAR 26.13

PROCESS

The LMA's Resource Management Program (RMP) is responsible for reviewing Controlled Hazardous Substance (CHS) Facility permit applications to treat, store or dispose hazardous waste. Through the permitting process, the RMP evaluates the permit applicant's ability to manage hazardous waste safely and in conformance with applicable regulatory requirements. The permit specifies all requirements that the permit holder is subject to in conducting the permitted activities. Tentative determinations by the RMP to issue or deny an application for a permit include opportunities for public review and comment. The permit holder is evaluated for compliance with the terms of the permit in compliance inspections of the permit holder's facility

The Technical Services and Operations Program (TSOP) is responsible for issuance of RCRA Subtitle C Site Identification Numbers (EPA ID Number), collecting and reporting the Biennial Report (BR) data, collecting and tracking manifests, and certification of transporters of CHS. TSOP issues new EPA ID Numbers, updates information for existing EPA ID numbers, and submits this information to EPA's RCRAInfo database. TSOP collects the BRs, which summarize waste generated during each odd-numbered calendar year. BRs are analyzed and information reported by large-quantity generators (LQGs) is submitted to EPA.

Manifests are completed when generated wastes are shipped off-site and copies are submitted to TSOP for monitoring and tracking. Any transporter who picks up or drops off CHS must be certified as a hauler and have all vehicles/trailers certified. Failure to comply with Maryland and federal laws and regulations can result in corrective actions.

The Solid Waste Program (SWP) is responsible for compliance at hazardous waste facilities, which include permitted Treatment, Storage and Disposal (TSD) facilities and federally defined large and small quantity generators (LQGs and SQGs). All permitted TSD facilities and those that receive off-site waste are inspected at least once a year. LQGs, defined by federal regulations as generating 2,200 pounds or more of hazardous waste in any calendar month are inspected at least once every five years. New LQGs and those who have not been inspected in the last three years are first priorities. Maryland has approximately 455 LQGs and 13,000 SQGs. Resource constraints limit inspections of SQGs to complaint-response situations.

SUCCESSSES/CHALLENGES

While there was a decrease of inspections, the Solid Waste Program's Compliance Division focused on performing actual physical inspections to meet EPA's grant commitments rather than audits conducted through an in-office file review.

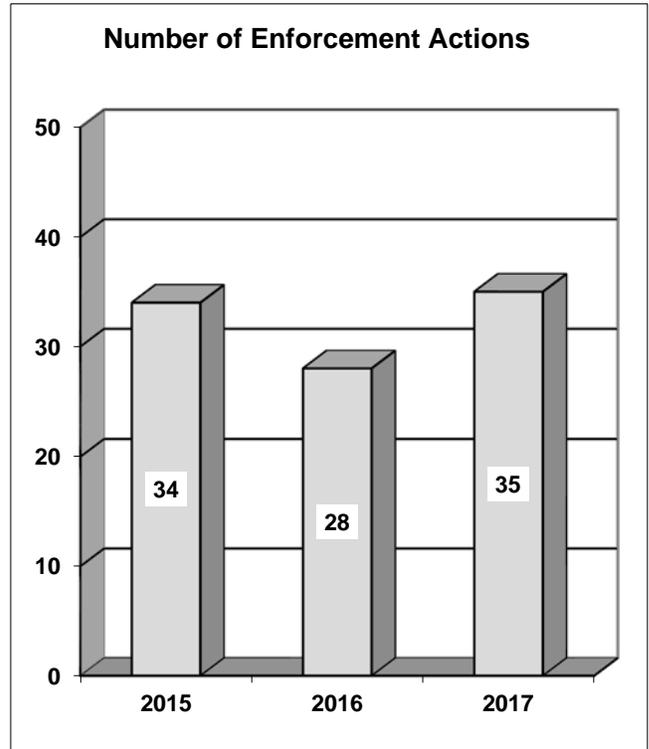

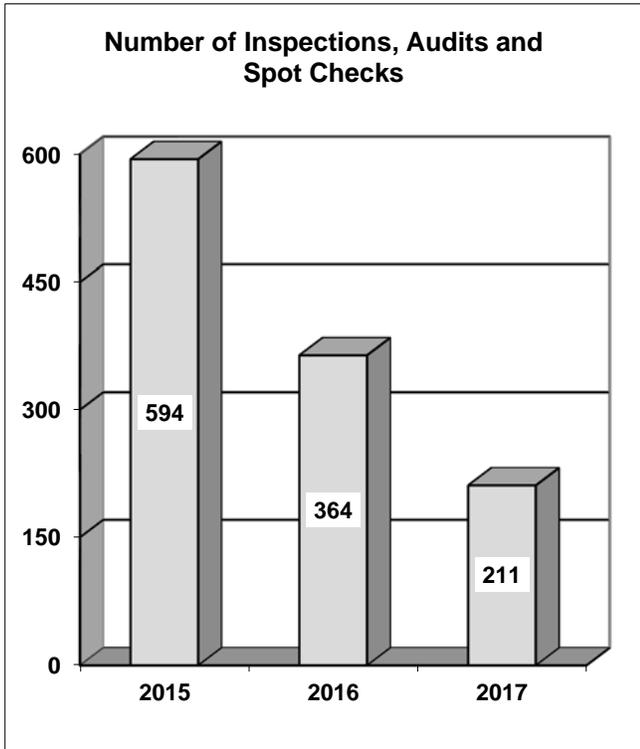

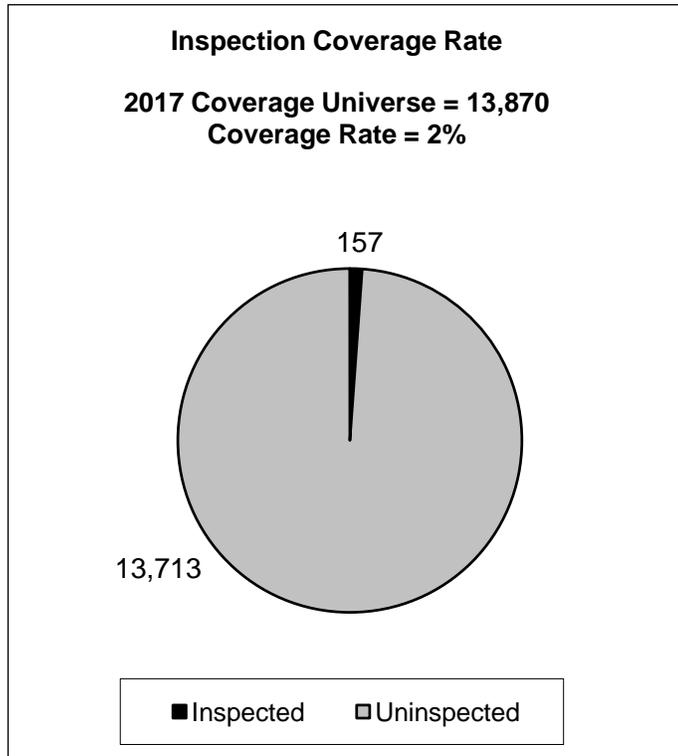

The FY 2016 inspection coverage rate of 2% remained the same in FY 2017. Enforcement actions increased from 28 in FY 2016 to 35 in FY 2017. In addition to civil actions, the SWP's Compliance Division referred one case to the Environmental Crimes Unit.

A major cleanup of EPA identification numbers including deactivating closed facilities continues to be conducted by TSOP and will continue into the next fiscal year in preparation for EPA's National eManifest Rule anticipated going live in June 2018. The universe remains relatively consistent due to the continuing issuance of new generator identification numbers. A majority of retail stores and pharmacies continue to claim LQG status regardless of their actual quantity of CHS generated. It is anticipated that the universe could increase in the next fiscal year as facilities apply for a generator identification number in preparation of the eManifest Rule.

Hazardous Waste

Lead Poisoning Prevention

PURPOSE

The Lead Poisoning Prevention Program (LPPP) oversees activities designed to reduce the incidence of childhood lead poisoning. These activities involve accreditation and oversight of lead abatement service contractors, maintenance of a registry of blood lead levels, investigation of childhood lead poisoning cases, and enforcement of the statute and regulations. The Technical Services and Operations Program (TSOP) works closely with LPPP and is responsible for the maintenance of the registry of rental properties.

AUTHORITY

FEDERAL: Toxic Substances Control Act
Centers for Disease Control

STATE: Environment Article, Title 6, Subtitles 3, 8 & 10; COMAR 26.16.01-.04 and
Environment Article, Title 7, Subtitle 2; COMAR 26.02.07

PROCESS

Maryland law requires that all blood lead level (BLL) test results be reported to the Department, which in turn reports all results for children at risk to the local health departments for case management. Through these BLL referrals and by other means, if LPPP discovers that an affected property (pre-1978 rental dwelling properties) does not meet the required standards of care (risk reduction, registration of the rental property, and distribution to tenants of two documents explaining tenant rights and the hazards of lead paint), appropriate corrective actions against a violating party may be taken. In order to meet the required standards of care, accredited third-party inspectors and/or contractors may be hired by property owners to meet these compliance standards. LPPP may perform oversight of these inspectors and/or contractors to ensure compliance with regulatory standards as outlined in the statute and regulations so that further exposure to lead hazards is kept to a minimum.

TSOP regulates all affected properties (pre-1978 rental dwelling properties). TSOP collects information from owners of affected properties and issues tracking numbers for the purpose of registration, inspections, certification and annual renewals of affected properties.

SUCSESSES/CHALLENGES

Lead data is collected on a calendar-year basis. During CY 2016 a total of 118,619 (21.9%) children were tested from a universe of 541,994 children 0-72 months of age. There was an increase in the percentage testing compared to 20.6% in 2015. The population of children 0-72 months of age increased from CY15 to CY16 by 6,900 children.

Of those 118,619 children tested in CY16, a total of 355 (0.3%) were identified with a venous or capillary blood lead level > 10 micrograms per deciliter ($\mu\text{g}/\text{dL}$). This was a decrease of 22 children compared to 377 during CY15. Children identified with a first-time venous or capillary blood lead level > 10 $\mu\text{g}/\text{dL}$ during CY16 totaled 270 (0.2%). This was also a decrease of 10 children with a new incidence case compared to in CY15. It should be noted that the incidence and prevalence percentages remained the same in CY16 and there was a decrease in numbers of blood lead levels > 10 micrograms per deciliter ($\mu\text{g}/\text{dL}$) even though there was an increase in the population tested.

In 2016 a revised Targeting Plan (Plan) for children recommended a revised strategy for testing Maryland children for lead exposure. It was the first comprehensive reassessment of lead testing strategies in the State since 2004 and incorporates new recommendations from the U.S. Centers for Disease Control and Prevention (CDC) regarding blood lead levels that will require follow up action from clinicians, government agencies, and other stakeholders. As a result of the Plan, all health care providers are now required to test all 1 and 2 year olds in Maryland.

The number of compliance inspections performed by the Department's inspectors decreased from 3,719 in FY 2016 to 3,265 in FY 2017. During FY 2017, the staff in Lead Accreditation and Oversight (LAO) Division spent a significant time on the ongoing investigation of the validity of lead free certificates issued by an accredited contractor and company. The Program continues to build compliance partnerships with other government agencies throughout Maryland. This coordination has allowed the Program to do more targeted enforcement.

The inspection coverage of the regulated community increased from 38% in FY 2016 to 42% in FY 2017. The increase in the coverage rate resulted from a significant decrease in the number of affected properties since more property owners have elected to meet the lead-free standards for their properties. Accredited inspectors are hired by property owners primarily to perform lead inspections required by law on pre-1978 residential rental properties. Inspections are mandated before tenants move into pre-1978 residential rental units. The results of these inspections are submitted to the Department.

On January 1, 2015 there was a change in the lead law that defined "affected property" to include properties built between 1950 and 1977 increasing the universe of regulated properties significantly

The Rental Registry Section in TSOP continues to work on an audit project started in FY 2016 to more clearly identify the Universe of Rental Properties. During the project, the Universe of Properties has declined due to removal of properties from the database that are no longer for rent, forfeited/bankrupt, sold or certified lead free. Those owners who have not registered their rental properties are being contacted and, if warranted issued a Notice of Violation (NOV). In FY 2017, the Rental Registry Section issued over 6,000 NOVs for failure to register properties for calendar year 2016.

****There was a change in tracking method starting in FY 2013

Lead Poisoning Prevention

Oil Control Program - Aboveground Facilities

PURPOSE

The Oil Control Program (OCP) performs a broad range of activities related to the safe handling, storage, and remediation of petroleum products. The OCP issues permits and performs oversight of aboveground storage facilities, transportation facilities, and oil-contaminated soil treatment facilities. Permits are also issued by the OCP for the discharge of treated oil-contaminated water. In addition, the OCP issues licenses and collects fees for the import of petroleum products into Maryland.

AUTHORITY

STATE: Environment Article, Title 4, Subtitle 4; COMAR 26.10

PROCESS

The OCP is responsible for reviewing permit applications, inspecting sites prior to writing permits, and issuing Oil Operations Permits for facilities handling oil in Maryland. Site visits may also lead to the discovery of compliance violations. During inspections, facility conditions are documented and the permittee is advised of the status of compliance. If corrective action is warranted, the facility is directed in accordance with Department guidelines and procedures. The OCP also responds to aboveground oil spills throughout the State. In addition, the OCP licenses entities that transfer oil into Maryland and collects a fee on the transfer.

SUCSESSES/CHALLENGES

The management of aboveground storage tanks containing petroleum continues to be in good standing as a result of a combination of compliance assistance, permit application review, and enforcement. Site visits and permit application reviews have revealed opportunities for compliance assistance at facilities to avoid releases into the environment or other possible emergencies. This shows in the inspection of 244 facilities in FY 2017, an increase from 229 in FY 2016. In addition, the 245 oil transfer licenses issued was an increase in FY 2017 from 204 in FY 2016.

PENALTIES			
Amount of administrative or civil penalties obtained (\$ collected in FY)			\$3,500

* Permits/licenses. This includes aboveground storage tanks and oil-contaminated soil operations. The Oil (Contaminated Soil) Operations Permit is issued to facilities that store and/or treat soil contaminated with petroleum product from underground storage tank leaks or surface spills. Due to the small number of facilities involved, these numbers were incorporated into the Oil Aboveground Facilities numbers beginning in FY 1999.

** Coverage rate above is computed as the total number of permitted sites inspected and dividing that by the sum of the total number of permits/licenses in effect.

OCP - Aboveground Facilities

Oil Control Program - Pollution Remediation Activities

PURPOSE

The Oil Control Program (OCP) oversees remediation activities at sites where petroleum products have been discharged and are impacting soil or groundwater. The oversight ensures that responsible parties remediate sites in a timely manner, protecting the public's health and the environment. The majority of sites are gasoline service stations, both operating and closed. Sites also include commercial and residential heating oil systems, and businesses that have their own petroleum distribution systems for use in vehicle fleets.

AUTHORITY

FEDERAL: Resource Conservation and Recovery Act - Subtitle I

STATE: Environment Article, Title 4, Subtitle 4; COMAR 26.10

PROCESS

When a release of petroleum product is reported to the OCP, appropriate staff is assigned to the investigation. Groundwater and soil cleanups can be technical in nature and require detailed oversight. The OCP will prioritize the response to the release based on multiple factors including the oil type, amount released, and the potential impact to the health of the public and the environment. Most remedial sites will require frequent inspections and meetings. During an inspection, the responsible party will be advised of the direction of the cleanup and status of compliance. Each site is in violation by virtue of the fact that a release has occurred and corrective action will be performed in accordance with the Department's guidelines and procedures. Enforcement actions may be taken if the responsible party is not complying with cleanup orders.

SUCSESSES/CHALLENGES

Three major factors maintain the success of the OCP in managing cleanups: 1) the presence of a strong technically-proficient field staff, 2) an emphasis on removing the worst contamination from the ground by over excavating during the removal of the UST, and 3) a strong presence by the Underground Storage Tanks (UST) Compliance Division. The number of active remediation sites increased in FY 2017 to 953 from 842 in FY 2016.

Oil Pollution Remediation Activities

Oil Control Program – Underground Storage Tank Systems

PURPOSE

The Oil Control Program (OCP) inspects underground storage tanks (UST) with the goal of reducing the incidence and severity of releases associated with the storage of regulated substances in USTs. This is accomplished by ensuring compliance with operational requirements including: release detection; corrosion protection; overfill prevention; financial responsibility requirements; and construction standards. Sites can include service stations, oil terminals, hospitals, schools, military facilities, and marinas.

AUTHORITY

FEDERAL: Resource Conservation and Recovery Act - Subtitle I

STATE: Environment Article, Title 4, Subtitle 4; COMAR 26.10

PROCESS

The Department requires all regulated UST systems to be registered with the Oil Control Program. In addition, all UST system technicians, removers, and inspectors must pass a test given by the OCP and maintain a valid certification. Every three years, at a minimum, each federally regulated UST system is inspected as required by the U.S. Environmental Protection Agency (EPA). A tank owner is required to hire a certified third party inspector to complete the inspection. When violations are found, an OCP inspector will conduct a follow up inspection and issue corrective action if warranted.

SUCSESSES/CHALLENGES

The EPA requires that UST facilities be inspected once every three years. The OCP Compliance Division met this requirement in FY 2017 by overseeing the inspection of 1,076 of the 2,805 registered UST facilities in FY 2017. The facilities inspected continue to show a good compliance rate due to the diligence and compliance assistance that the OCP Compliance Division has been able to provide over the last several years. A strong field presence of technically-proficient staff is necessary for achieving and maintaining compliance at facilities and thereby protecting Maryland's water resources from one of the most prevalent environmental risks across the State.

* Certified UST technicians and removers are part of the regulated community and, therefore, the inspection universe, and were included in this report starting in FY 2000.

** Coverage rate is computed as the total number of sites inspected divided by the total number of registered UST sites. Technician and Remover Certifications are part of the Program's universe. However, this number is not included in coverage rate in order not to bias the evaluation of the Program's goal to visit each underground storage tank system on a routine basis.

Oil Underground Storage Tank Systems

Refuse Disposal

PURPOSE

Improper handling of society's byproducts in the form of domestic, commercial and industrial wastes can pose direct threats to the public health and the quality of Maryland's water resources. The Solid Waste Program (SWP) is responsible for the review of the technical information needed to support applications for new solid waste disposal facilities and coal combustion by-product (CCB) landfills. Inspections and enforcement of regulations are conducted routinely at permitted and unpermitted disposal facilities, CCB landfills, CCB storage sites, and for CCB transportation vehicles. Regulated solid waste acceptance facilities include municipal landfills, rubble landfills, land-clearing debris landfills, non-hazardous industrial waste landfills, municipal incinerators, solid waste processing facilities, and transfer stations. Corrective action will be performed in accordance with the Department's guidelines and procedures if violations are found.

AUTHORITY

FEDERAL: Resource Conservation and Recovery Act - Subtitle D; 40 CFR 257 and 258
STATE: Environment Article, Title 9, Subtitle 2; COMAR 26.04.07, 26.04.10

PROCESS

Permits are required for the construction and operation of solid waste acceptance facilities. The permit review activities cover a broad range of environmental and engineering elements to ensure state-of-the-art techniques protect the public health and environment. SWP geologists and engineers review groundwater monitoring and soil gas data required by the permit to detect aqueous and gaseous pollutants, which may be migrating through the ground from landfills and dumpsites. When releases are detected, plans for landfill caps, groundwater and gas extraction, and treatment systems are required, and subject to SWP's review and approval prior to implementation. Routine unannounced inspections are performed to ensure compliance. Inspectors also conduct complaint inspections regarding unpermitted facilities and open dumps. Inspections and investigations are conducted to find, stop, and clean up illegal dumps and reduce the problems they cause, including odors, soil erosion, discharge of pollutants to surface water, and groundwater pollution. If violations are found, corrective actions are conducted in accordance with the Department's guidelines and procedures.

SUCCESSES/CHALLENGES

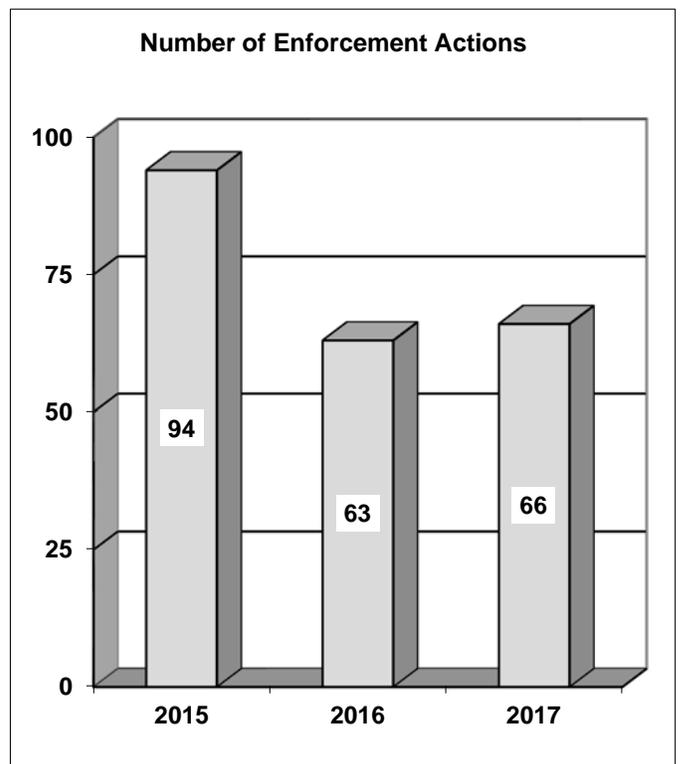

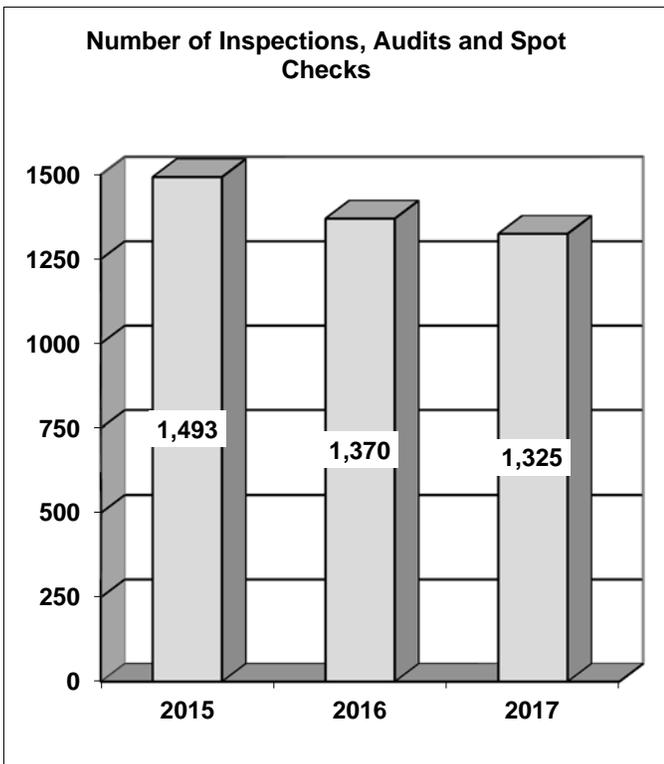

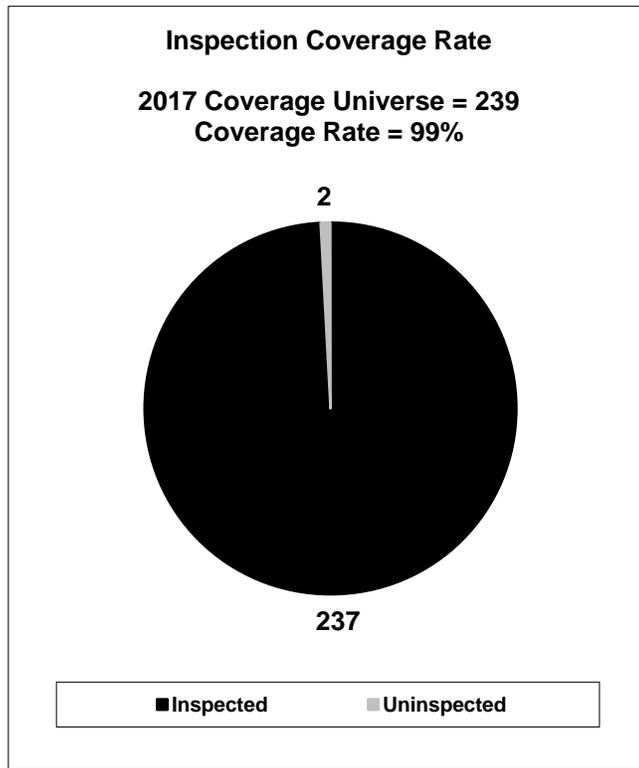

The inspection coverage rate increased to 99% in FY 2017 from 97% in FY 2016. The number of sites inspected increased slightly from 225 in FY 2016 to 237 in FY 2017. The total number of inspections, audits, and spot checks declined from 1,370 in FY 2016 to 1,325 in FY 2017. Refuse Disposal enforcement actions remained relatively consistent in FY 2017 with 66 enforcement actions compared to 63 in FY 2016.

Refuse Disposal

Scrap Tires

PURPOSE

Licenses and approvals are required for the hauling, collection, storage, processing, recycling, and burning (tire-derived fuel) of scrap tires. These licenses and approvals ensure that scrap tires are managed in a manner protective of public health and the environment. In coordination with the Maryland Environmental Service (MES), the Scrap Tire Unit may arrange for cleanup of illegal scrap tire dumps. Enforcement actions may be taken to ensure compliance with the scrap tire laws, regulations, and license and approval conditions.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 2;
Environment Article, Title 10, Nuisance Abatement;
COMAR 26.04.

PROCESS

Any person who collects, stores, or hauls as part of a commercial business, recycles, or processes scrap tires is required to obtain the applicable license or approval. To obtain a license or approval, a person must submit a completed application and the required information. The Scrap Tire Unit may conduct a public information meeting on certain types of license or approval applications.

The Scrap Tire Unit requires property owners to cleanup illegally stockpiled scrap tires. Depending on available revenue, a State special fund can be used when a landowner fails to cleanup a scrap tire dump. Cost recovery from the landowner or other identifiable responsible party for all costs associated with the cleanup is required, unless the owner qualifies for an inheritance exemption. Corrective orders and penalties may be issued for violations in accordance with the Department's guidelines and procedures.

SUCCESSSES/CHALLENGES

The Scrap Tire Unit continues the cleanup of scrap tires from illegal stockpiles. New stockpiles continue to be discovered every year and during FY 2017 a total of 39 new sites containing approximately 26,684 scrap tires were discovered. A total of 52 stockpiles were cleaned up in FY 2017 resulting in the removal of 191,120 scrap tires. Since the inception of the Scrap Tire Unit in 1992, over 10.8 million scrap tires have been cleaned up from 1,082 stockpiles. At the end of FY 2017, there were 53 stockpiles containing approximately 336,426 scrap tires remaining to be cleaned up, including 200,000 tires located at one site that was discovered in FY 2016.

Since the Harford Waste-to-Energy facility permanently closed in 2016, the Scrap Tire Unit continues to face challenges in finding processors for scrap tires, especially dirty scrap tires. There are currently four scrap tire processors in Maryland that are accepting scrap tires from the public. Of the four processors, only three will accept dirty scrap tires. The tipping fees for dirty scrap tires are significantly higher than those for clean scrap tires. There are processors in neighboring states, but most will not accept dirty scrap tires. The Scrap Tire Unit has asked the MES to evaluate the current status of the Maryland Scrap Tire Recycling System (System) and to make recommendations for expanding the System.

One promising development in the scrap tire market is the emergence of pyrolysis as a potential viable option for processing scrap tires. Pyrolysis is the process of breaking chemical bonds in the rubber using heat and pressure to produce other products, such as pyrolytic oils and carbon black. There are plans for establishing pyrolysis facilities in Maryland, Pennsylvania, and Virginia within the next several years. The Department has tasked MES with researching the technology of pyrolysis and laws and regulations developed by other states.

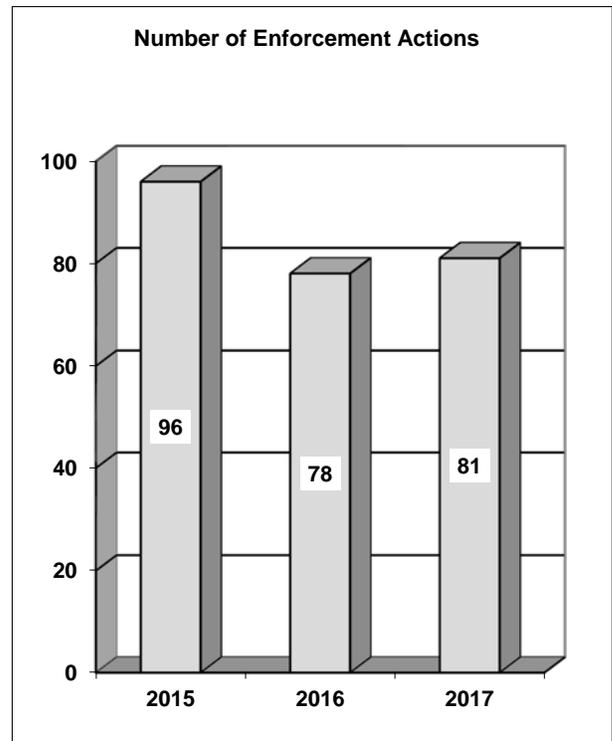

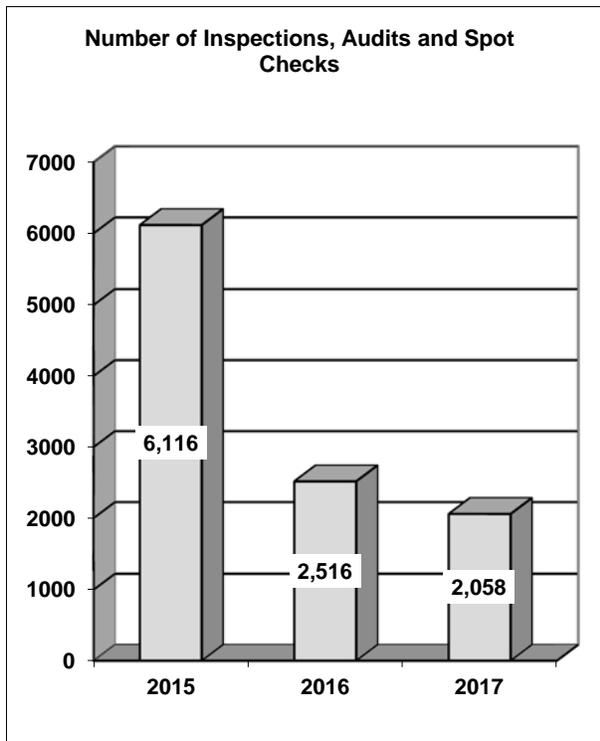

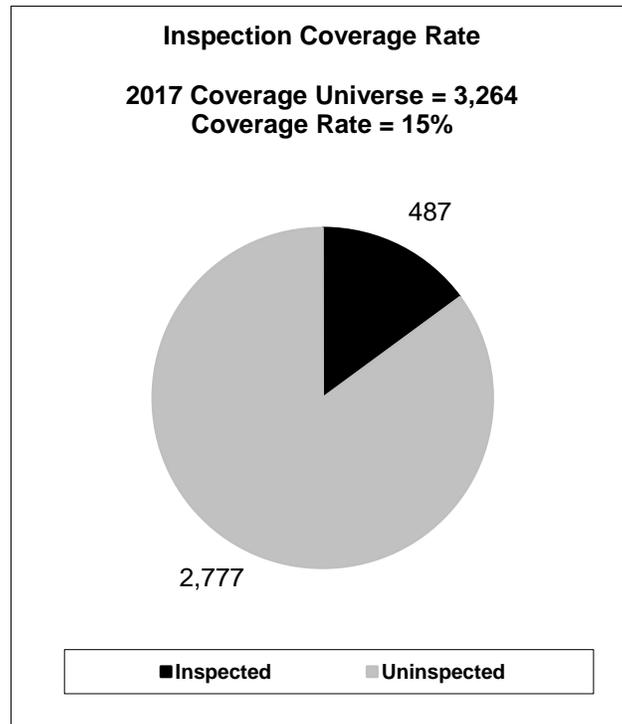

Scrap tire inspections are performed by inspectors in the Solid Waste Program (SWP). Larger scrap tire facilities are inspected more frequently than smaller ones through routine unannounced inspections. Inspectors also investigate citizen complaints about illegal dumping or handling of scrap tires. The SWP's Compliance Division conducted 755 scrap tire site inspections and spot checks at 487 sites in FY 2017. Enforcement actions increased from 78 in FY 2016 to 81 in FY 2017. Additionally, three referrals were submitted to the Environmental Crimes Unit in FY 2017.

Scrap Tires

Sewage Sludge Utilization

PURPOSE

Sewage Sludge (also known as biosolids) is one of the final products of the treatment of sewage at a wastewater treatment plant. A Sewage Sludge Utilization (SSU) Permit issued by the Resource Management Program (RMP) is required for any activities involving sewage sludge treatment, composting, transportation, storage, distribution, land application, energy generation or incineration, marketing, innovative or research project, disposal, or alternative utilization at a municipal landfill in Maryland. The purpose of the permits is to ensure that sewage sludge is managed in a manner that is protective of public health and the environment. Sewage sludge is not sewage.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 2; COMAR 26.04

PROCESS

A person must submit a completed application and the required information for a SSU permit. A person applying for a SSU Permit to apply treated sewage sludge on agriculture land must submit a nutrient management plan (NMP) in accordance with Maryland Department of Agriculture (MDA) requirements. Copies of SSU Permit Applications are provided to local governments for their review, comments, and depending on the type of activity, an opportunity for a public meeting.

Sewage sludge composting facilities, pelletizers, and storage facilities are inspected by the Solid Waste Program several times per year. Landfill disposal operations are inspected during the course of routine landfill inspections. Land application sites are inspected when the workload allows or when complaints are received. If required, inspectors may recommend corrective action be taken. If a significant violation is found, a site complaint is issued. Corrective orders and penalties may be issued for violations in accordance with the Department's guidelines and procedures. Inspectors also investigate citizens' complaints about sewage sludge utilization.

SUCCESSSES/CHALLENGES

The number of inspections and spot checks decreased from 224 in FY 2016 to 179 in FY 2017. A total of 1,640 audits were completed in FY 2017 which was a significant increase from 874 conducted in FY 2016. The RMP Biosolids Division was able to review a backlog of reports which contributed to the increase in audits in FY 2017.

While the coverage rate for sewage sludge utilization sites is 12%, it should be noted that many of these sites are farm fields that may only receive sewage sludge once or twice during a five-year permit life. Inspection efforts are concentrated toward those sites that are active during the year. The RMP will continue reporting the total coverage value for consistency with past values, and for comparison to other programs.

Sewage Sludge Utilization

Animal Feeding Operations

PURPOSE

The Animal Feeding Operations (AFO) Division within the Resource Management Program (RMP) regulates discharges from farms with animals that are stabled or confined for 45 days or more in any 12-month period in an area where crops/forage are not grown. AFOs have the potential to discharge nutrients and sediments to surface waters if improperly designed, constructed, operated, or maintained.

AUTHORITY

FEDERAL: Federal Clean Water Act

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08.

PROCESS

AFOs are subject to regulations through registration as a Concentrated Animal Feeding Operation (CAFO) or a Maryland Animal Feeding Operation (MAFO) under a General Discharge Permit (GD Permit) for AFOs. This GD Permit requires these operations to be designed, constructed, operated, and maintained according to specific standards which control or eliminate discharges of pollutants to the waters of the State. All large, and certain medium, AFOs are required to apply for coverage under the GD Permit.

During the five-year duration of the GD Permit, every registered operation will be inspected at least once to ensure compliance with the permit conditions. These conditions incorporate relevant portions of farm-specific required plans, including, but not limited to, a Comprehensive Nutrient Management Plan (CNMP) or a Nutrient Management Plan and Soil Conservation and Water Quality Plan, written in accordance with State and federal requirements. Complaints involving CAFOs or MAFOs are addressed by inspectors specifically assigned to the AFO Compliance Unit. Enforcement is accomplished through site complaints, notices of violation, and administrative, civil, and criminal mechanisms.

SUCCESSSES/CHALLENGES

In FY2017, the AFO Division issued 193 permits compared to 158 in FY 2016. The number of permits in effect increased by 16 to 565 in FY 2017 from 549 in FY 2016. On December 1, 2014 a new GD Permit (14AF) went into effect with an expiration date of November 30, 2019. Currently, 275 permits are pending approval. All applications for new construction of AFOs, expansion of existing AFOs, or those that have allowed their coverage to expire are given priority. The remaining AFOs that were covered by the previous permit (09AF) are operating under an administratively extended registration.

The AFO Division inspected 181 sites in FY 2017 which was an increase from 174 in FY 2016. The number of inspections, audits and spot checks decreased in FY 2017 to 1,067 from 2,363 in FY 2016. The decrease was mainly due to audits conducted by the AFO Division decreasing to 844 in FY 2017 from 2,097 in FY 2016. The AFO Division audited one calendar year (2016) of Annual Implementation Reports (AIRs) compared to two calendar years (2014 and 2015) in FY 2016.

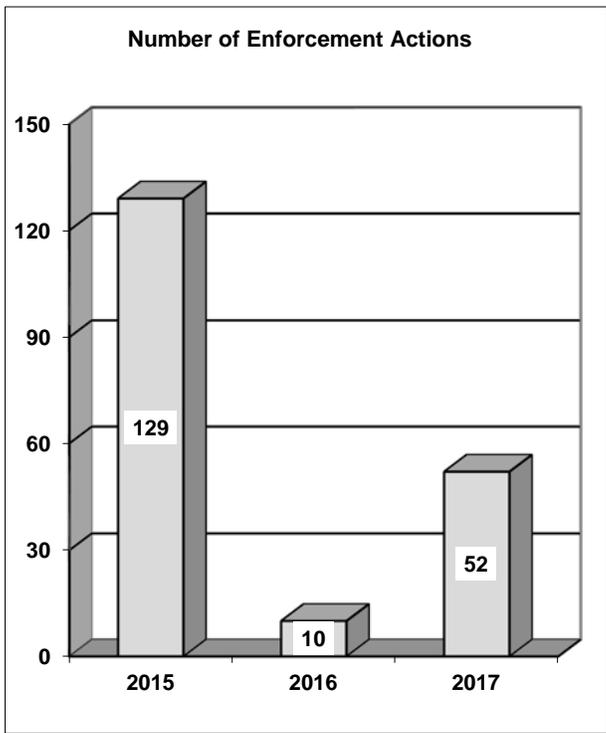

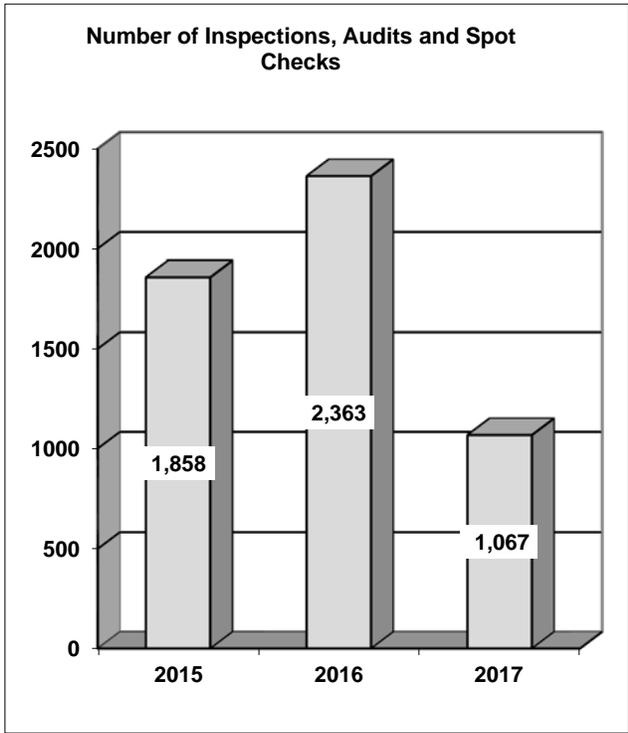

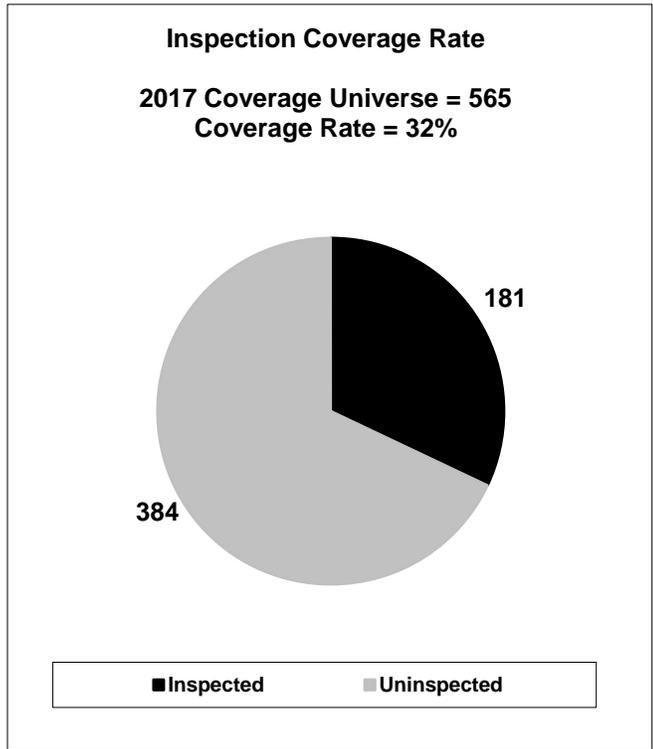

A new challenge for the AFO Division is the threat of Avian Influenza. The bio-security protocols limit inspections of poultry farms to one per day impacting the number of inspections being conducted.

Animal Feeding Operations

Natural Wood Waste Recycling

PURPOSE

The Solid Waste Program (SWP) issues Natural Wood Waste (NWW) Recycling permits to ensure that NWW is managed in a manner that will not cause harm to the public health and the environment. Recycling is conducted by chipping the wood waste (stumps, root mat, branches, logs, and brush) and converting it into products, including mulch and compost. The permitting system was designed to prevent large-scale fires at NWW facilities.

Natural wood waste facilities were targeted for additional inspections in FY 2003 and FY 2004 after several severe fires at this type of facility in FY 2002.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 17; COMAR 26.04.

PROCESS

Permits are required for the operation of facilities that recycle NWW (stumps, root mat, branches, logs, and brush). NWW activities are authorized by a General Permit or Individual Permit. Permits are not required for these kinds of operations at landfills, if the activities are performed by an individual or business recycling its own wood wastes on its own premises, or for wood waste recycling operations performed by a government or non-profit agency. Routine unannounced inspections are performed at these facilities several times a year to ensure compliance with the permit, as well as investigating citizen complaints. If violations are found, corrective actions are required in accordance with the Department's guidelines and procedures.

SUCSESSES/CHALLENGES

The majority of the NWW facilities were in compliance with General/Individual Permit conditions. As a result, only seven site complaints were issued in FY 2017.

* Number of inspected sites includes permitted facilities, government facilities that do not require permits, unpermitted natural wood waste operations and citizen complaints.

** Coverage rate is computed as the total number of sites inspected and dividing that by the total number of permits/licenses in effect plus the number of unpermitted sites discovered and inspected.

Natural Wood Waste Recycling

Mining – Coal

PURPOSE

Federal law requires that a person obtain a permit in accordance with the federal Surface Mining Control and Reclamation Act (SMCRA or Act) to mine coal anywhere in the United States. The purpose of the Act was to establish a nationwide program to protect the public and the environment from the adverse effects of surface coal mining operations. In Maryland, the Department is authorized by the federal Office of Surface Mining to administer a surface mining control program consistent with the federal law. The Bureau of Mines Division (BOM) is responsible for processing, reviewing, and issuing all permits and enforcing all laws and regulations enacted by the State related to coal mine operations. These operations include extraction of coal by surface or underground mining methods, processing, and loading coal after extraction, recovering coal from coal refuse piles left by previous coal mining operations, and prospecting for coal. The Abandoned Mine Land Division uses funds available through Title IV of SMCRA, the EPA, and various State funds to eliminate health, safety, and environmental issues caused by coal mines that were inadequately reclaimed and abandoned prior to the date of the federal law (August 3, 1977).

AUTHORITY

FEDERAL: P.L. 95-87 Surface Mining Control and Reclamation Act of 1977

STATE: Environment Article, Title 15, Subtitle 1 through 11; COMAR 26.20

PROCESS

A person wanting to obtain a coal mining operations permit must file an application which includes maps, plans, and designs detailing how the operation is to be conducted and evaluations of potential environmental impacts that could result from the operations. The BOM reviews the designs and environmental evaluations and solicits comments on the proposed operations from the general public through public notifications and from government agencies through direct notification. If the BOM finds the application is in compliance with program requirements, a permit will be issued. The applicant is required to post a bond sufficient to assure reclamation of the site.

Permitted operations are inspected, at a minimum, twelve times per year for compliance with the plans contained in the permit application, conditions of the permit, and State coal mining laws and regulations. Permitted operations are also required to submit on a regular basis monitoring data for surface and ground water quality, data related to blasting, coal production, and progress reports relating to reclamation of the sites. This submitted data is reviewed for regulatory compliance.

Coal mining operations are required to reclaim the land to a condition similar to what existed prior to mining. Areas disturbed by the operations must be regraded to a similar shape and aspect as existed pre-mining and vegetated with diverse permanent species of plants that will stabilize the soil, prevent erosion, and support the intended post-mining use of the land. The bond posted for the permit will not be released for five years following completion of the mining operations, during which time the site will continue to be inspected and reclamation success evaluations will be performed by the BOM and the Maryland Land Reclamation Committee (LRC). The LRC is a group established by law comprised of government, industry, and private citizen representatives who, among other duties, are charged with

evaluating the success of reclamation on individual surface mine permits and without whose approval the bond cannot be released.

In addition, the Abandoned Mine Lands Division carries out the reclamation of pre-law areas mined prior to 1977 which were not adequately reclaimed. These reclamation activities improve the quality of the environment, increase the beneficial use of the land and water resources, and eliminate any dangers to public health and safety. Projects are selected from an inventory of documented sites developed by the Abandoned Mine Lands (AML) Division and approved by the Federal Office of Surface Mining.

SUCCESSSES/CHALLENGES

The Mining Program met 100% of all legally-mandated inspection frequencies in FY 2017. State capital funds were used to assess the feasibility of Acid Mine Drainage (AMD) remediation in Matthew Run, measure quantity and quality of AMD discharges from three drainage tunnels, and assess AMD impacts in Jennings Run.

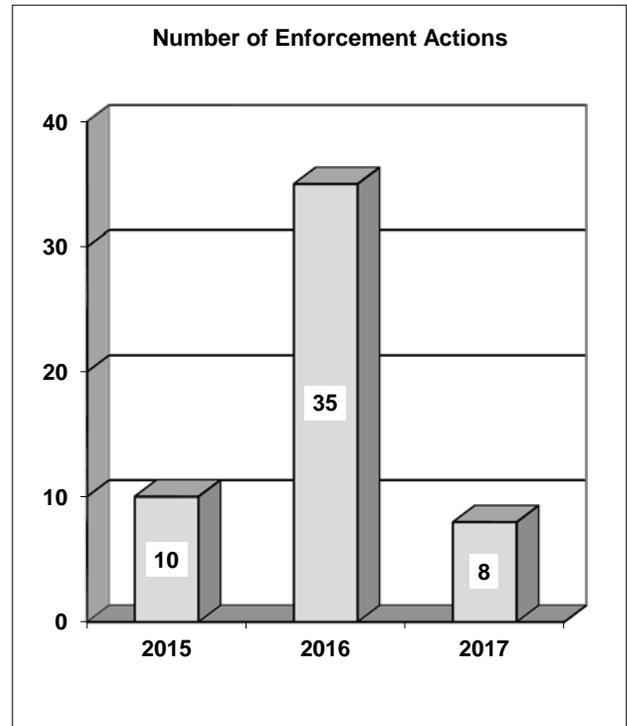

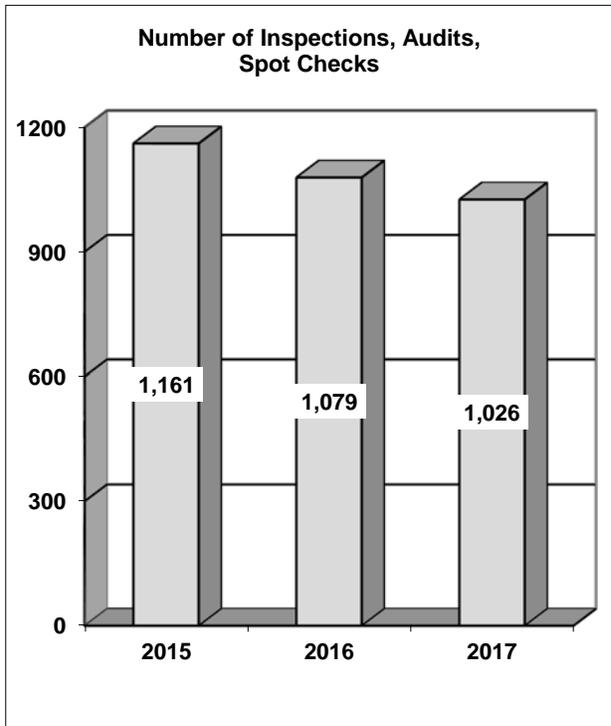

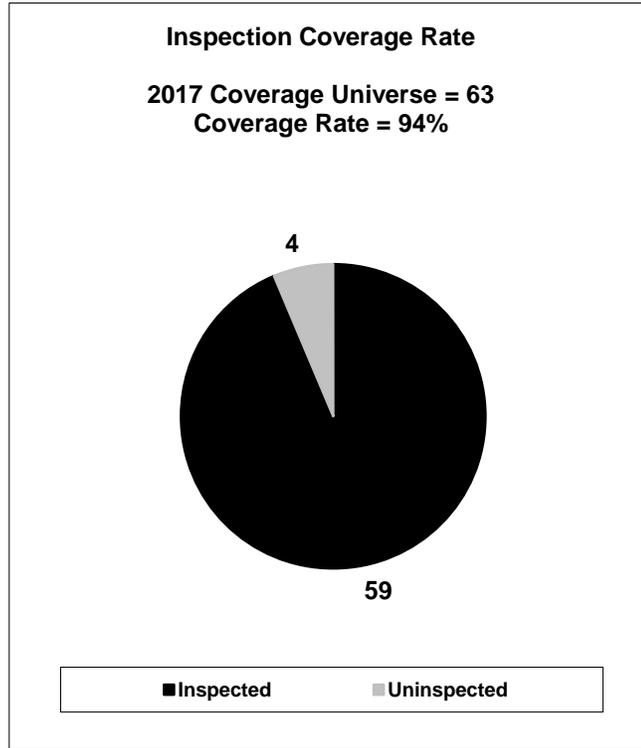

Using Federal Abandoned Mine funds provided by SMCRA and EPA, the AML completed projects that stabilized mine subsidence under a State road, stabilized two landslides impacting a county road and a railroad, repaired drainage infrastructure damaged by AMD, constructed several new AMD treatment systems, and performed operation and maintenance of fifty-three existing AMD treatment systems.

The BOM oversees the compliance of 58 inspectable units under Maryland's federally approved coal mining regulatory program. Reviewing, monitoring, and adjusting the reclamation liability of all active permitted mine sites to ensure that the posted bond is sufficient to fully reclaim the sites, should an operator vacate or forfeit a permit, is continuously being conducted by the BOM. Vindex Energy, one of the State's major permittees, recently emerged from bankruptcy and the BOM is continuing to monitor the company's sites to ensure that all necessary reclamation requirements are being fulfilled as the company winds down their operations in the State. A number of permittees have begun revising their reclamation plans to incorporate the newly formulated Undeveloped: Conservation Lands Alternative (CLA) reclamation guidelines. At the request of operators and landowners to enhance the wildlife habitat, the CLA was developed by the BOM in conjunction with the LRC to find a viable reclamation approach between undeveloped grasslands and forestlands.

Mining – Coal

Mining – Non-Coal

PURPOSE

The extraction of minerals is a basic and essential activity for the economic well being of the State and nation. This activity must be balanced against potential safety and environmental effects. The mining permit review evaluates possible impacts on surrounding properties, the local environment, and the public safety of the operation. Other impacts such as historical resources and habitat protection are reviewed as well. Each site is bonded to ensure compliance with the permit.

AUTHORITY

STATE: Environment Article – Title 15, Subtitle 8; COMAR 26.21

PROCESS

Upon issuance of a permit, the site is assigned an inspection frequency. This frequency can be adjusted at any time based on site conditions and workload. All water quality permits, wetland, waterway and sediment approvals are inspected as part of the mine permit inspection.

The Department does not have statutory authority to collect administrative penalties for non-coal mining permits but violations of other media associated with mining may be penalized as warranted. Mining laws do provide for civil and criminal penalties.

Improperly maintained environmental controls have the potential to degrade water quality through the transport of sediment-laden water from drainage and stormwater runoff, and can adversely impact the aquatic habitat. The program evaluates mining practices, reclamation, and stormwater management for compliance to ensure that adverse impacts to surface and groundwater are minimized.

SUCCESSSES/CHALLENGES

The Department has worked closely with mine operators and surrounding communities to reduce the impacts of the mine sites to the communities. Mud tracking from mine sites onto community roadways continues to be a frequent issue that impacts communities. The Department has increased inspections at active sites and imposed penalties where problems have continued. Implementations of preventive measures have increased including installation of wheel washes have reduced impacts.

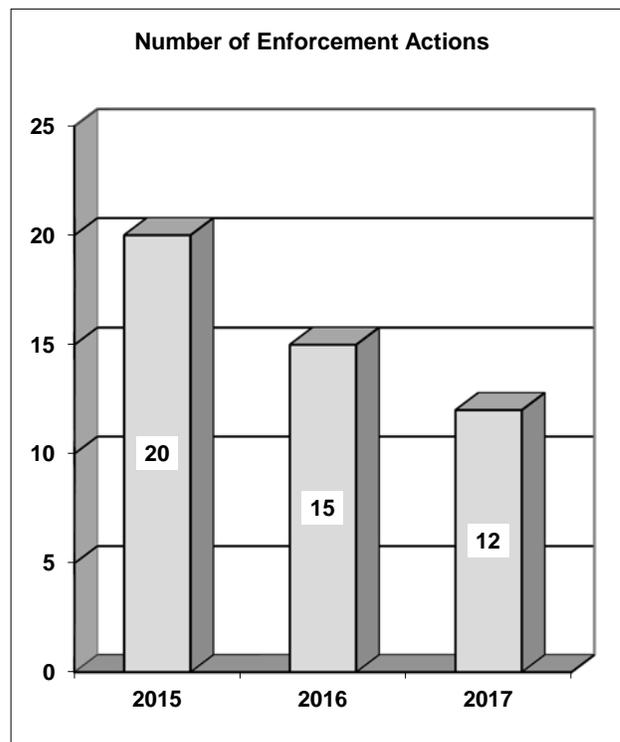

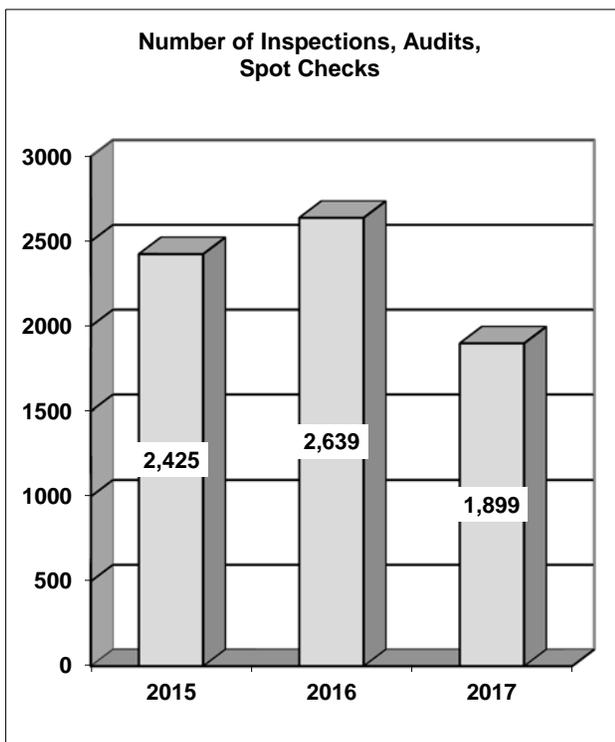

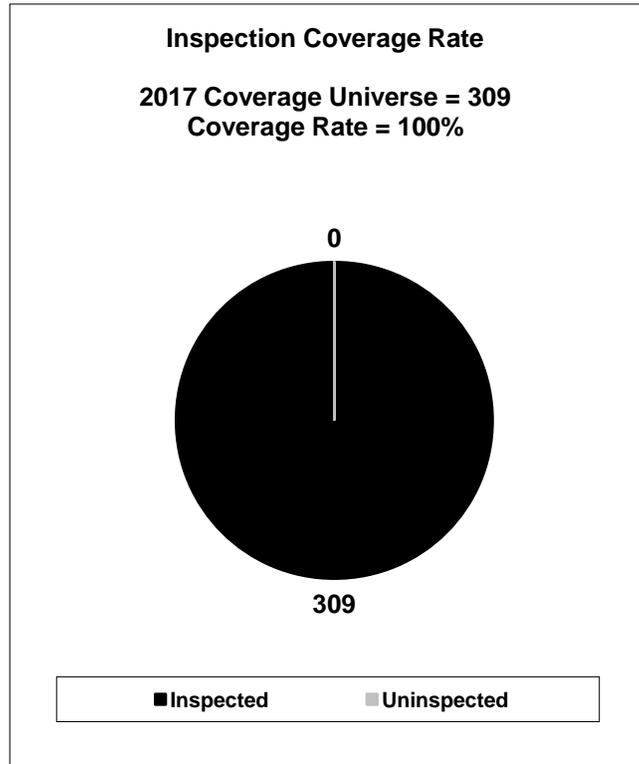

Another area of concern is blasting impacts on communities that have developed in areas proximate to quarry operations. The Department has met frequently with community leaders and has worked closely with quarry operators to reduce the impact of blasting. Changes in blast design, timing of shots, and more communication with impacted residents has helped to reduce the number of complaints from residents in areas with active quarries.

Mining – Non-Coal

Oil and Gas Exploration and Production

PURPOSE

In the State of Maryland, drilling and operations of gas or oil wells, operations of a natural gas storage facilities and oil and natural gas exploration using seismic operations require a permit. Permits include environmental controls to ensure public safety, provide protection of public and private property, and minimize the impacts resulting from the operation.

AUTHORITY

STATE: Environment Article - Title 14, Subtitles 1, 2 and 3; COMAR 26.19.

PROCESS

Sites are assigned an inspection frequency during issuance of a permit, license, or authorization. Routine inspections of the facilities are scheduled in accordance with the assigned priorities and may be adjusted to reflect changes in workloads or inspection priorities. The inspector assesses compliance with permit conditions and determines if corrective action may be required. During active drilling operations, the frequency of inspection is higher compared to when a well is completed.

SUCCESSES/CHALLENGES

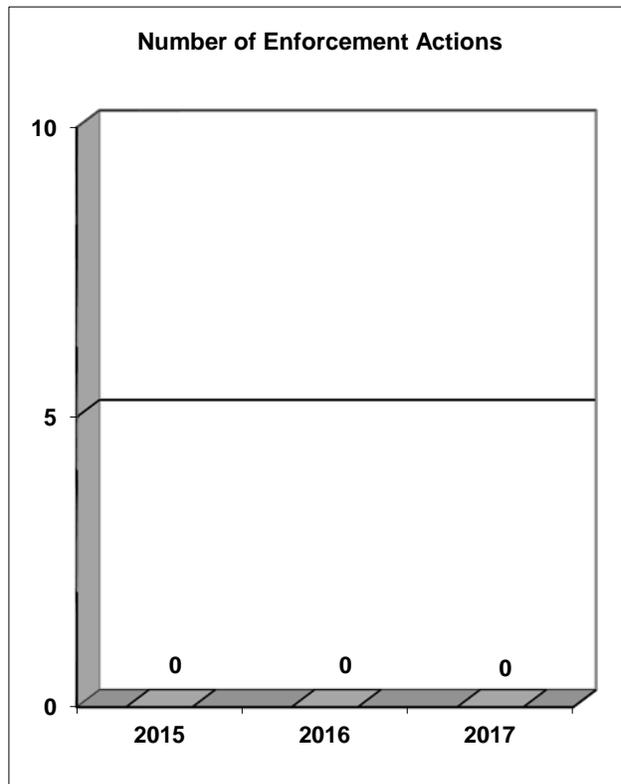

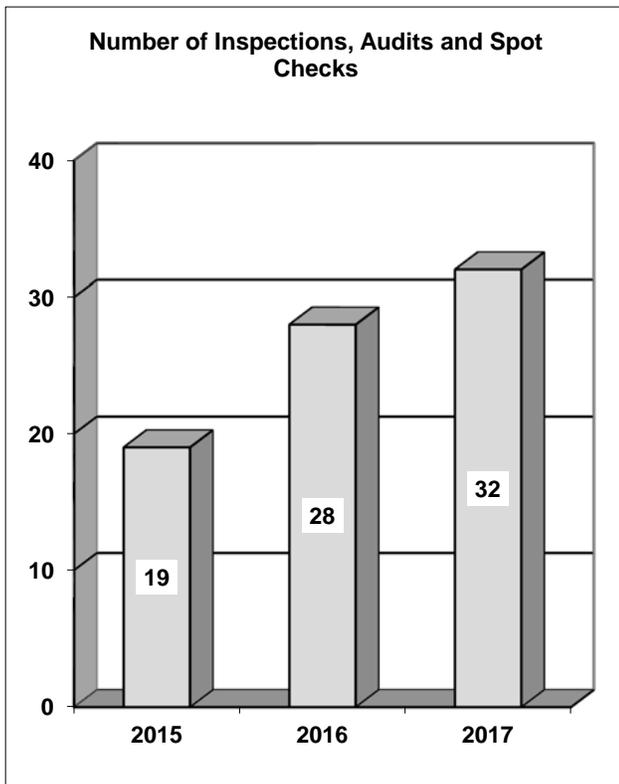

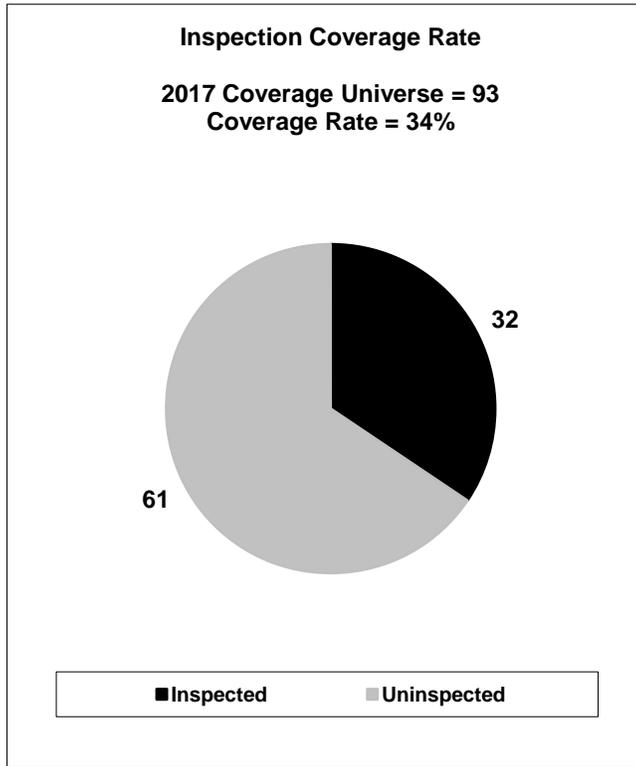

In FY 2017, there were no new applications for drilling and operating permits. During the 2017 General Assembly, legislation passed and was signed by the Governor that prohibits any hydro-fracking in the State of Maryland for the purpose of gas or oil production. Drafting of regulations that were previously proposed will not be completed. Existing storage wells will continue to be in use and will be inspected for structural integrity, environmental impacts, and public safety.

Oil and Gas Exploration and Production

Electronics Recycling

PURPOSE

The Maryland Statewide Electronics Recycling Program (MSERP) regulates the manufacturers and retailers of Covered Electronic Devices (CEDs). A CED is a computer or video display device with a screen that is greater than 4 inches measured diagonally. This includes computers, computer monitors, televisions, portable DVD players, cell phones, tablets, etc. A CED does not include a video display device that is part of a motor vehicle or that is contained within a household appliance or commercial, industrial, or medical equipment. Manufacturers of CEDs that intend to sell these devices in Maryland are required to register with the Maryland Department of the Environment and pay a registration fee. The fee, which is paid annually, is based on the number of CEDs the manufacturer sold in Maryland during the previous year, as well as whether the manufacturer has a Department approved CED takeback program. To qualify, the takeback program must meet certain requirements, such as provision of a free method for consumers to return the manufacturer's CEDs for recycling and a method for consumers to remove personal data from CEDs prior to return for recycling (if applicable). Both manufacturers and retailers are prohibited from selling or offering for sale CEDs in the State unless the manufacturer of those CEDs is registered with the Department.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 17.

PROCESS

Each manufacturer of a qualifying CED must complete and submit a registration form with the proper accompanying registration fee to the Department by the annual submission deadline of March 1st. The Department tracks registrations and payments submitted by manufacturers of CEDs. The annual registration is valid until the last day of February of the following year (e.g., registrations due March 1, 2017 are valid until February 28, 2018).

The annual registration fee is determined based upon the number of CEDs sold by a manufacturer in Maryland the previous year (e.g., the 2017 registration fee is based upon 2016 sales data) and whether or not the manufacturer has a Department approved CED takeback program. Industry sales data, purchased by the Department, is used to verify the quantity of CEDs sold and reported to the Department by each manufacturer via the annual registration form. The Department also reviews and approves or denies manufacturer takeback programs.

A list of registered manufacturers is generated and posted on the Department's website. The listings for manufacturers with an approved takeback program are hyperlinked and/or are accompanied with a toll-free phone number to be used by customers to obtain details on a manufacturer's takeback program.

The Department inspects CED manufacturer web pages, brick-and-mortar stores, and web based retailers to determine manufacturer compliance with the MSERP.

SUCSESSES/CHALLENGES

Manufacturers who sold unregistered CEDs in Maryland, which were discovered through retailer inspections, registered their brands after being notified by a retailer. In FY 2017, 88% of manufacturers registered by the March deadline. This shows the continued effectiveness of the registration process in conjunction with the retailers' inspections. In FY 2017, the Department renewed the purchase of national electronic manufacturer sales information which allows a faster and more accurate review of manufacturer registration forms and verification of fees owed.

Because manufacturer registrations are issued throughout the year and a fiscal year (July – June) spans two registration years (March – February), the number of registrations issued during a fiscal year may vary from the number that are in effect at the end of that fiscal year. This explains why 136 annual registrations were issued during FY 2017 and only 109 were in effect as of the end of that fiscal year.

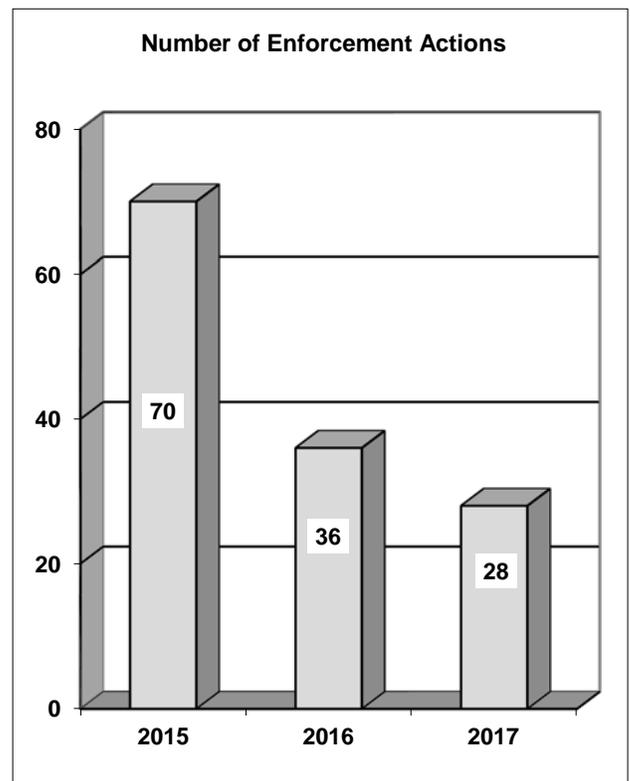

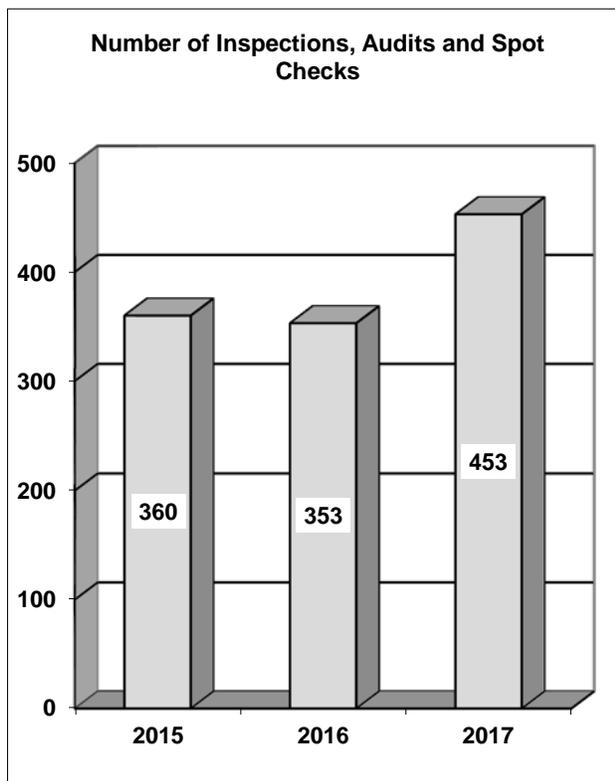

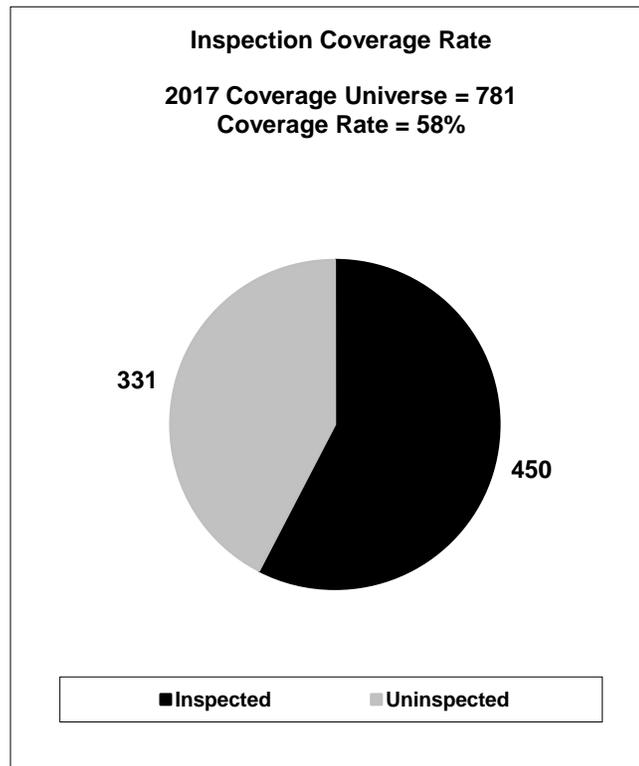

All brick-and-mortar electronic retailers were in compliance with the MSERP at the end of FY 2017. The Department inspected 450 sites in FY 2017, a significant increase from 347 in FY 2016.

WATER AND SCIENCE ADMINISTRATION

Water and Science Administration

Executive Summary

The Water and Science Administration (WSA) has compliance and enforcement responsibilities for the water quality and resource conservation programs that follow in this report. The Compliance Program is responsible for compliance associated with state groundwater discharges, federal and state surface water discharges, pretreatment, erosion and sediment control for construction activity, waterway construction, and tidal and non-tidal wetlands. The Water Supply Program (WSP) is responsible for public drinking water and water appropriation and use permit compliance, and the Sediment, Stormwater and Dam Safety Program (SSDSP) is responsible for dam safety compliance.

WSA's Compliance Program inspects sites for compliance with numerous laws, regulations and permits or other authorizations addressing wastewater discharges, surface water and groundwater pollution, stormwater discharges and erosion and sediment control, tidal and nontidal wetlands, and waterway construction. As a result, many of the enforcement cases may address numerous categories of violations and injunctive relief.

WSA's Compliance Program continues to prioritize inspections to ensure compliance with environmental laws. All people holding general permits for stormwater associated with construction activities are required to inspect their sites for erosion and sediment controls weekly and after every major storm event. Thirteen county governments and 10 municipalities are delegated erosion and sediment control enforcement authority for these projects and perform inspections of projects in their jurisdictions. In 2013, the Compliance Program revised its erosion and sediment control inspection priorities to focus on large construction sites. Larger sites take longer to inspect and may hold multiple Agency permits, which may translate to fewer sites visited, but their environmental impact when in noncompliance can be much greater than small sites.

The Sediment, Stormwater, and Dam Safety Program (SSDSP) is responsible for reviewing and approving erosion and sediment control and stormwater management plans for State and federal construction projects and has seen an increase in best management practice (BMP) retrofit project submissions in the last year. Over the course of the last year, SSDSP completed the transfer of sediment control and stormwater management plan review and approval authority to the State Highway Administration (SHA) and the Maryland Transit Administration (MTA). Currently, all new construction projects undertaken by these agencies will be reviewed and approved by SHA and MTA. This will allow SSDS staff to concentrate on new development projects from all other State and federal agencies.

SSDSP is also responsible for administering Maryland's Dam Safety Program. This involves issuing permits and inspecting new dam construction and maintenance and repair of existing structures. The State's current inventory contains 572 dams, 66 of which are breached and not inspected on a regular basis. A total of 665 permits have been issued for Maryland's inventory. This amount includes the number of new dams built and the total number of maintenance and repair permits issued. In past years, a significant compliance concern for the SSDSP is that many of Maryland's high and significant hazard dams lacked current Emergency Action Plans (EAPs), which are critical for storm preparedness and

public safety. In May 2017, the State enacted new legislation requiring that owners of High and Significant hazard dams must submit updated EAPs by May 1st of each year.

The Dam Safety Division (DSD) receives requests for technical expertise regarding small embankment facilities. The addition of two engineers in FY 2017 to the DSD was instrumental in addressing this issue. The DSD continues to engage the soil conservation districts and local county stormwater management officials. The DSD will continue these efforts in the future.

The mission of the Water Supply Program (WSP) is accomplished through planning and permitting for water withdrawal, protection of water sources that are used for public water supplies, oversight and enforcement of routine water quality monitoring at public water systems, regular on-site inspections of public water systems, review of design plans for new or upgraded water treatment, and prompt response to water supply emergencies.

In FY 2017, Maryland continued implementation and enforcement of the Safe Drinking Water Act (SDWA) for all public water systems (PWS) in Maryland in accordance with the most recent primacy MDE has received. To assist PWS with meeting the compliance requirements of the rules, WSP provided training and on-site technical assistance throughout the State. It is expected that even with the additional assistance from the WSP, the systems with limited resources will encounter challenges in the implementation of the most recent regulations in the first couple of years after the rules become effective; this is generally seen as an increase in the number of technical violations. During this period, the compliance rate for PWSs in Maryland improved in comparison to the previous year.

WSP recorded almost 39,000 additional audits of reports submitted by drinking water systems. This is more than double the number of audits performed in past years. The migration of data to the Safe Drinking Water Information System-State (SDWIS-State) was completed in late FY 2016. The new database is designed to capture more of the compliance data that are submitted to MDE by the public water systems and allows the auditing of this additional data.

For FY 2017, the program heightened its concerns about lead in drinking water as a result of the problems in Flint, Michigan, legionella outbreaks in hospitals and preventative measures to avoid Legionella outbreaks, monitoring schools for lead (FY2017 House Bill 270), and emerging contaminants such as perfluorinated compounds (PFOS and PFOA).

During FY 2017, WSP worked with permittees with Water Appropriation and Use Permits to bring them into compliance. Larger public water systems conduct water audits and submit water loss plans to reduce unaccounted for water. Reviews of the audits showed that many systems need to devote additional resources into reducing the amount of unaccounted-for water. Notices of Violation were sent to permit holders with outstanding reporting requirements, expired permits, and those who used water in excess of their permitted allocation.

**Water and Science Administration
Performance Measures Executive Summary**

	<u>2016 Totals</u>	<u>2017 Totals</u>
<u>PERMITTED SITES/FACILITIES</u>		
Number of Permits/Licenses Issued	4,257	4,175
Number of Permits/Licenses in Effect at Fiscal Year End	26,950	24,548
<u>OTHER REGULATED SITES/FACILITIES</u>		
Other Sites	3,602	3,583
<u>INSPECTIONS</u>		
Number of Sites Inspected	4,630	5,563
Number of Sites Audited but Not Inspected	3,200	3,353
Number of Inspections, Audits, Spot Checks	46,569	89,417
<u>ENFORCEMENT ACTIONS</u>		
Number of Compliance Assistance Rendered	8,308	7,711
Number of Enforcement Actions Taken*	1,432	771
<u>PENALTIES</u>		
Amount of Administrative or Civil Penalties Obtained	\$1,176,876	\$1,652,682

* Calculated as the sum of all enforcement actions for each program as listed in the chart for each program.

Discharges – Groundwater (Municipal & Industrial)

PURPOSE

Excessive nutrients, bacteria, and industrial pollutants in wastewater have the potential to impact the quality of groundwater. The groundwater discharge permitting process provides a means of managing these impacts through monitoring, inspection and enforcement. The Wastewater Permits Program issues groundwater discharge permits to control the disposal of treated municipal or industrial wastewater into the State's groundwater via spray irrigation or other land-treatment methods such as subsurface discharge. Upon permit issuance, the Compliance Program is responsible for inspections and compliance assurance. Groundwater discharge permits establish pollutant discharge limits and require the permit holder to meet self-monitoring, record-keeping, and reporting requirements to protect public health and minimize groundwater pollution.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08

PROCESS

The Compliance Program performs inspections of sites with groundwater discharge permits as part of its overall inspection priority scheme, with priority given to sites that are the subject of complaints or are in violation based on failure to perform required self-monitoring and reporting, or due to violations of the effluent limitations in the permit. The inspector may conduct unannounced inspections and may collect samples for independent laboratory analysis as necessary to verify compliance with permit limits. Self-monitoring results are filed at the frequency specified by the permit (usually monthly or quarterly) in the form of Discharge Monitoring Reports (DMRs). DMRs are reviewed in the office, including queries of electronic data in the Integrated Compliance Information System to identify violations, and during inspections at the facilities in order to determine whether the facility is in compliance with applicable requirements. DMR reviews are shown in the following table on the line identified as "Inspections, Audits, Spot Checks." DMR reviews are not included in the determination of the inspection coverage rate.

SUCCESSSES/CHALLENGES

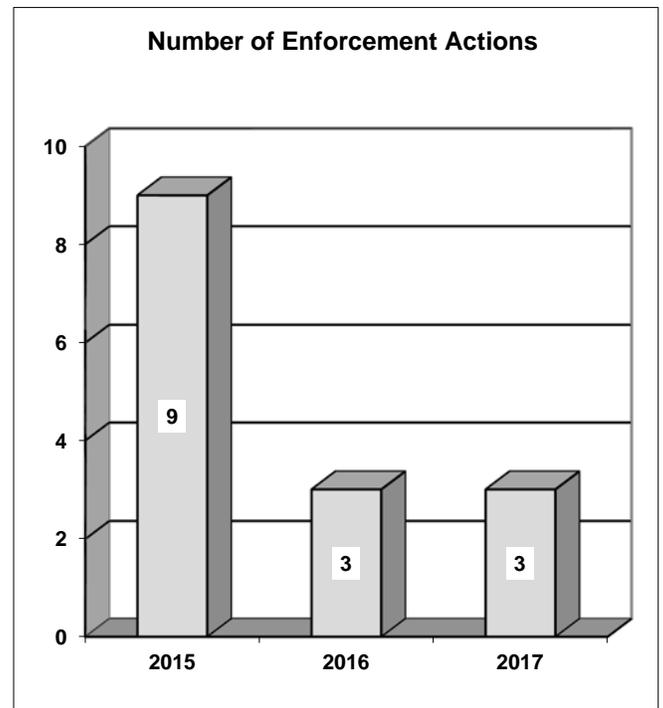

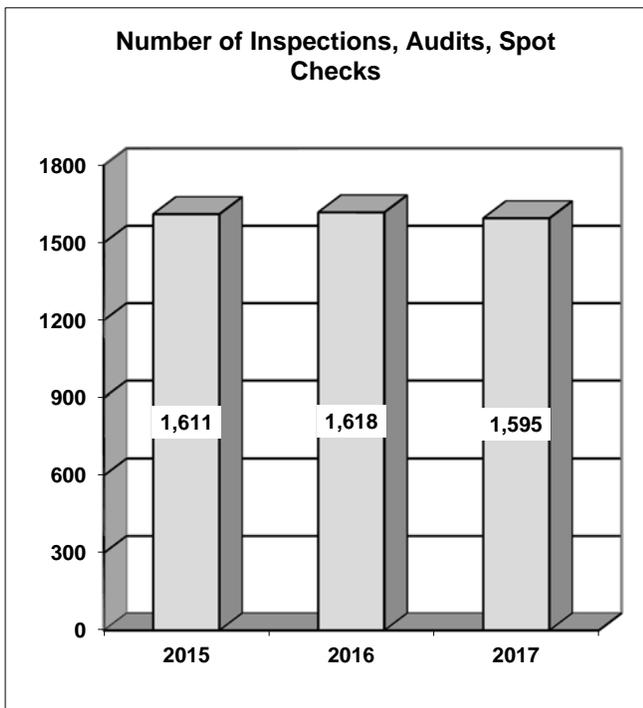

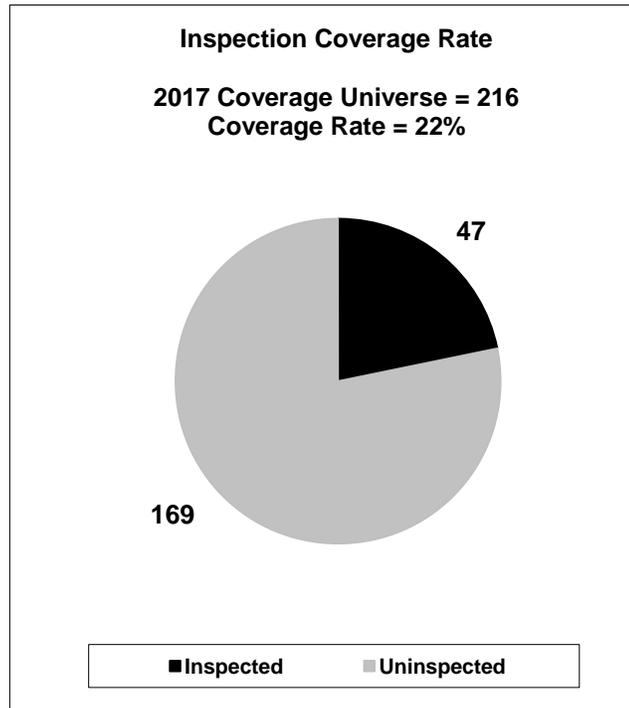

WSA continues to investigate and pursue enforcement cases to address groundwater pollution. WSA works with the Attorney General's Office on enforcement cases to address groundwater pollution concerns.

Discharges – Groundwater (Municipal and Industrial)

Discharges - Surface Water (Municipal & Industrial) State and NPDES Permits

PURPOSE

The federal Clean Water Act's National Pollutant Discharge Elimination System (NPDES) Program controls water pollution generated from a wide variety of sources including industrial activities, sewage treatment plants, certain agricultural activities and stormwater runoff from industrial, municipal and agricultural sources. All industrial, commercial or institutional facilities that discharge wastewater, including stormwater from certain industrial facilities, directly to surface waters of Maryland need a permit. Permit holders include local, state, and federal government agencies, as well as privately-owned treatment systems.

The NPDES permit system includes a stormwater component to control pollution generated from runoff associated with certain industrial sites, municipal storm sewer systems, construction activities, and concentrated animal feeding operations. Eleven categories of industry, and storm sewer systems operated by certain government agencies, are required under the Clean Water Act to have their stormwater discharges covered under an NPDES permit. For any construction activity that disturbs one or more acres, coverage must be obtained under MDE's general and individual NPDES permits for construction activity. These permits require developers to perform self-inspection and record keeping to ensure that sediment and erosion control measures are maintained and functioning in accordance with approved plans to prevent water pollution and stream bank erosion caused by excess erosion, siltation, and stormwater flows from construction sites.

Surface water discharge permits may combine all applicable State and NPDES requirements into one permit for facilities that discharge to State surface waters. The permit is designed to protect water quality in the water receiving the discharge.

AUTHORITY

FEDERAL: Clean Water Act

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08

PROCESS

The Compliance Program performs inspections of sites with surface water discharge permits as part of its overall inspection priority scheme, with priority given to sites that are the subject of complaints or in violation based on failure to perform permit required self-monitoring and reporting or due to violations of the effluent limitations in the permit. The inspector may conduct unannounced inspections and may collect samples for independent laboratory analysis as necessary to verify compliance with permit limits. Self-monitoring results are filed at the frequency specified by the permit (usually monthly or quarterly) in the form of Discharge Monitoring Reports (DMRs). During FY 2017 EPA regulations that require all DMRs to be submitted by the regulated entities via an electronic system took effect. Maryland uses the NetDMR system for this purpose, and the DMRs permittees submit through NetDMR are passed electronically to EPA's Integrated Compliance Information System database (ICIS). DMRs are reviewed in the office, including queries of ICIS to identify violations, and during inspections at the facilities in order to determine whether the criteria for "Significant Noncompliance" have been met. DMR reviews performed by the Compliance Program's Enforcement Division are included in the following

Table on the line identified as “Inspections, Audits, Spot Checks.” DMRs were reviewed for all permitted sites that require DMR submittals as a part of their permit.

SUCSESSES/CHALLENGES

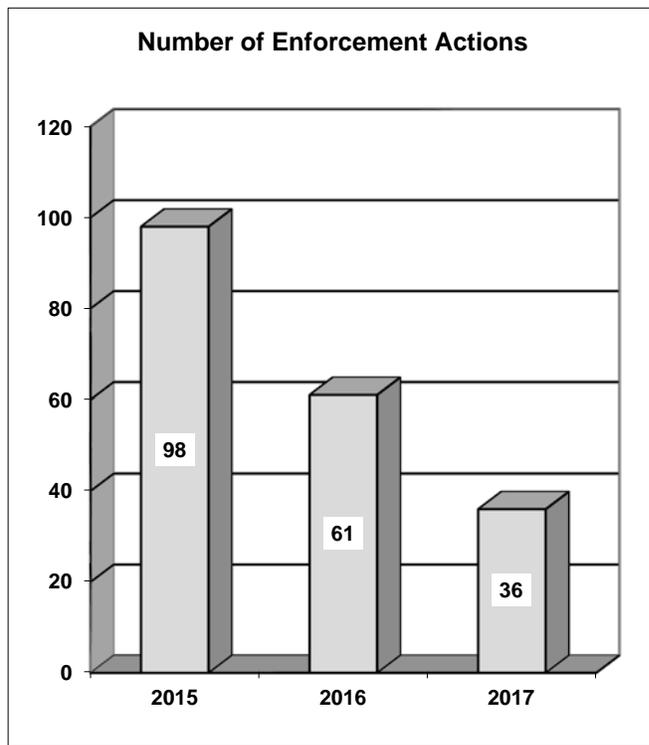

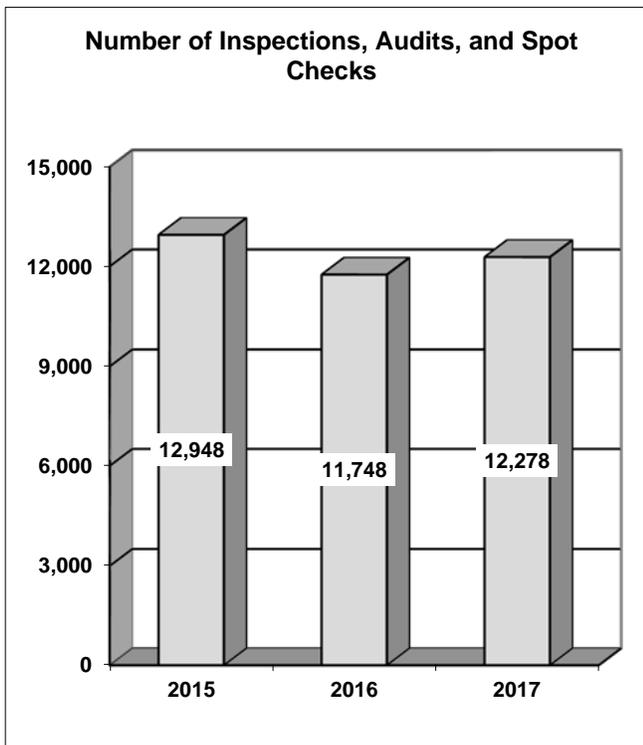

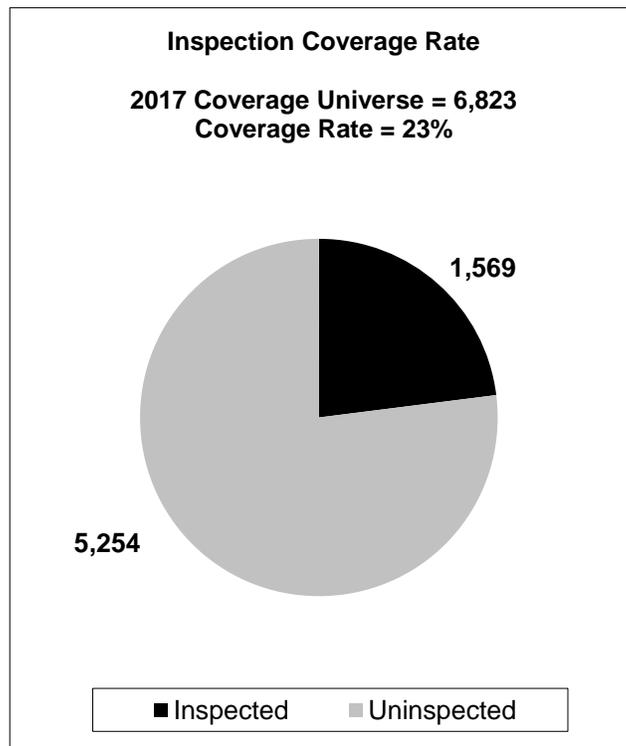

The Compliance Program inspects sites to check for compliance with numerous laws, regulations and permits or other authorizations addressing wastewater discharges, surface water and groundwater pollution, stormwater discharges and erosion and sediment control, tidal and nontidal wetlands and waterway construction, so many of the enforcement cases address numerous categories of violations and injunctive relief.

* This number includes new permits, renewals, and conversions/modifications of permits.

Discharges – Surface Water (Municipal & Industrial) State and NPDES Permits

Discharges – Pretreatment (Industrial)

PURPOSE

The Pretreatment Program is responsible for regulating wastewaters from industrial and other non-domestic sources discharged into publicly-owned treatment works (POTW). The Pretreatment Program seeks to prevent the discharge of toxic or corrosive discharges to the collection systems serving POTWs that may result in process upsets and failure of critical infrastructure. In accordance with its authority as delegated by EPA, MDE oversees 20 local pretreatment programs that are responsible for 180 industrial sources. In addition, pretreatment permits are issued directly to five industries discharging to non-delegated POTWs. Local pretreatment program responsibilities include issuing discharge permits to industrial users, conducting industrial inspections and performing compliance monitoring, developing and enforcing local limits, enforcing federal pretreatment standards, and assessing penalties against industrial users. These requirements are included in a delegation agreement, which is signed by the operator of the POTW and WSA, and incorporated by reference into the NPDES permit issued by WSA. Local governments are responsible for issuing penalties and enforcement actions associated with this program; therefore, those numbers are not reflected in WSA's enforcement statistics.

AUTHORITY

FEDERAL: Clean Water Act

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08

PROCESS

The Pretreatment Program oversees local pretreatment program implementation. This oversight is performed by the permitting program staff by conducting pretreatment compliance inspections of pretreatment programs; audits of pretreatment programs; joint review of industrial user permits; independent and joint industrial inspections with the POTW; review of quarterly status reports from the delegated POTWs; and initiation of enforcement actions when the POTW fails to act in accordance with its delegated responsibilities. The Pretreatment Program also issues permits to categorical industrial users discharging to wastewater treatment plants in areas of the state without delegated pretreatment programs. Compliance of these industrial users is tracked by review of periodic compliance reports and the results of annual inspections.

WSA oversees delegated pretreatment programs and takes enforcement action when needed to support the proper treatment of industrial discharges to wastewater collection and treatment systems to prevent damage to the treatment processes or infrastructure and pass through of pollutants to waters of the State.

The Pretreatment Program currently issues permits to categorical industrial users located in areas not serviced by jurisdictions with delegated pretreatment programs. In addition it provides oversight to 20 delegated pretreatment programs with technical and regulatory assistance. The Pretreatment Program also performs inspections at several industrial users that are permitted by local delegated pretreatment programs. The inspection coverage rate includes these industrial users as well as the entities directly permitted by WSA.

SUCSESSES/CHALLENGES

The Program is responsible for inspecting the permittees, the POTWs and only some of the industrial users permitted by the delegated POTWs. The Program is required by statute to provide a 100% coverage rate of those facilities. In FY 2017, the program successfully met that requirement.

* These are State-permitted industries subject to Categorical Pretreatment Standards under U.S. EPA regulations 40 CFR 403.6 and 40 CFR Chapter I, Subpart N.

** Coverage rate is defined as the number of sites inspected divided by the sum of permits/licenses in effect, the POTWs and the significant industrial users.

Discharge – Pretreatment (Industrial)

Stormwater Management and Erosion & Sediment Control for Construction Activity

PURPOSE

The purpose of the erosion and sediment control program is to lessen the impact to the aquatic environment caused by sediment leaving construction sites. The purpose of the stormwater management program is to reduce stream channel erosion, pollution, siltation, and local flooding caused by land use changes associated with urbanization, by maintaining, after development, the pre-development runoff conditions. Any construction activity in Maryland that disturbs 5,000 square feet or more of land or results in 100 cubic yards or more of earth movement must have approved erosion and sediment control and stormwater management plans before construction begins.

AUTHORITY

FEDERAL: Clean Water Act, Section 402; 40 CFR

STATE: Environment Article, Title 4, Subtitle 1 and Subtitle 2; COMAR 26.17

PROCESS

Inspection and enforcement authority for erosion and sediment control has been delegated or partially delegated to 13 counties, and eight municipalities and the Washington Suburban Sanitary Commission (WSSC) by the state. MDE inspections cover construction projects in non-delegated counties and State and federal projects. This report does not reflect the erosion and sediment control inspection and enforcement activities conducted by local governments in delegated jurisdictions.

Stormwater management approval for all non-state and non-federal projects is, by law, the responsibility of each local jurisdiction. MDE inspections of stormwater management facilities are performed for State and federal projects only. Upon issuance of a permit or authorization [whether by WSA's Sediment, Stormwater and Dam Safety Program (SSDSP) or by the local sediment control approval authority], a project file is transferred to the Compliance Program where an inspection priority is assigned. Routine inspections are scheduled based on the assigned priority and as workload allows. Facilities are not given advance notification of routine inspections. At any time during the process, the inspection frequency can be adjusted as site conditions or workload demand.

Stormwater and Erosion and Sediment Control are combined into one table because at the State level these projects are reviewed and approved as one project. For State and federal projects, plan review is performed by SSDSP and inspections are performed by the Compliance Program. All other projects are reviewed at the local level, and if delegated, inspected at the local level. In non-delegated jurisdictions, the MDE Compliance Program performs sediment control inspections.

Inspections performed related to an NPDES permit for the discharge of stormwater associated with construction activities are included in the table for surface water discharges.

SUCSESSES/CHALLENGES

Inspections are prioritized by focusing on large construction sites in non-delegated areas and State and federal projects, along with sites brought to MDE's attention by citizen complaints. In 2013, Larger sites take longer to inspect, which results in fewer sites visited, but their impact when in noncompliance can be much greater than small sites.

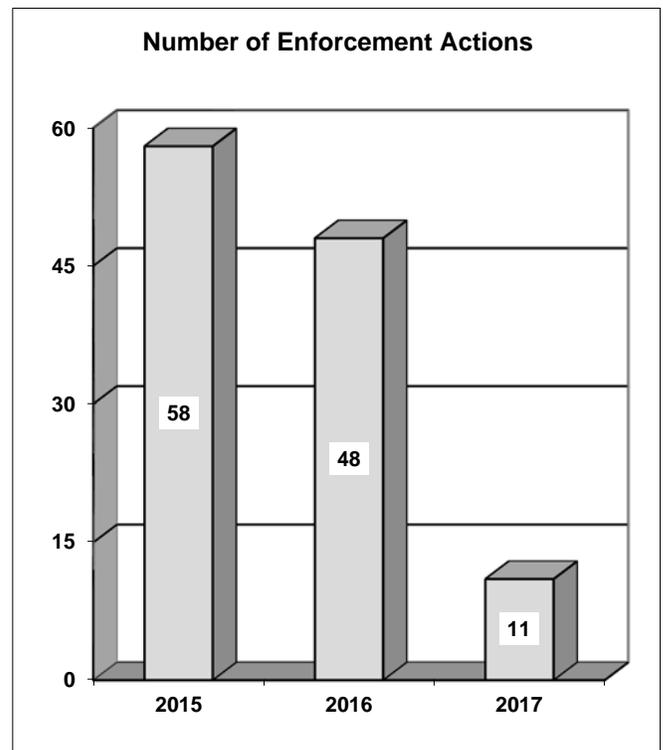

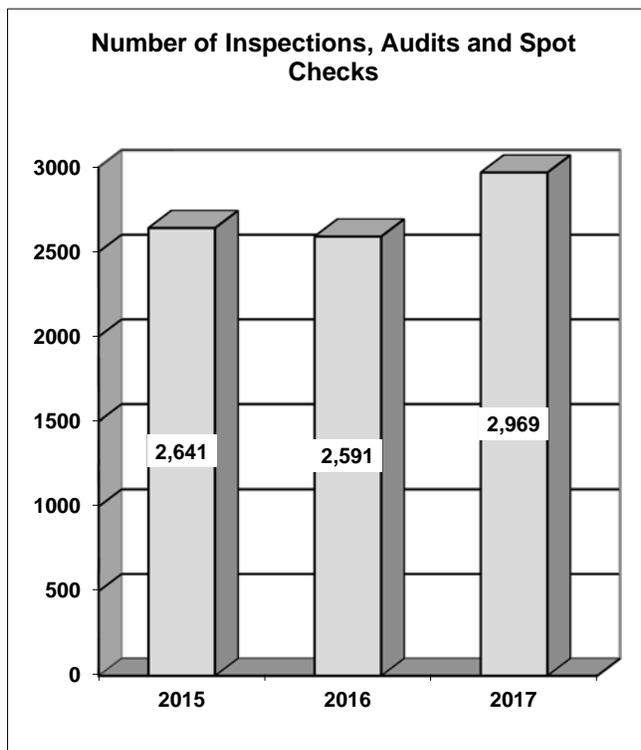

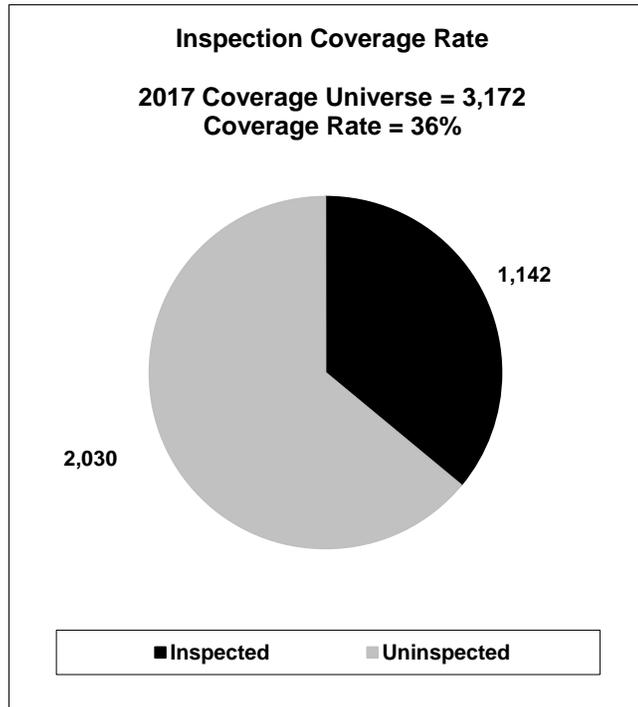

As in previous years, the Allegany, Caroline, Frederick, Queen Anne's and Washington Soil Conservation Districts continued to perform Erosion and Sediment Control inspections on behalf of MDE under Memoranda of Understanding. These districts are independent of county government. The numbers of sites inspected and numbers of inspections on the following table only include MDE's activities.

The Compliance Program continues to review files to ensure expired and completed projects are removed from the Program's list of approvals in effect. Similarly to last year's report, this review has resulted in a significant decrease in the number of sediment approvals reported as in effect in this year's report when compared with the FY 2016 report.

Stormwater Management and Erosion & Sediment Control for Construction Activity

Water Supply Program

PURPOSE

The mission of the Water Supply Program (WSP) is to ensure that public drinking water systems provide safe and adequate water to all current and future users in Maryland, and that appropriate usage, planning, and conservation policies are implemented for Maryland's water resources. This mission is accomplished through proper planning for water withdrawal, protection of water sources that are used for public water supplies, oversight and enforcement of routine water quality monitoring at public water systems, regular on-site inspections of water systems, review of design plans for new or upgraded water treatment, and prompt response to water supply emergencies. In addition to ensuring that public drinking water systems meet federal and State requirements under the Public Water System Supervision program, WSP also administers the wellhead/source protection program, and issues Water Appropriation and Use Permits for both public and privately owned water suppliers, and thousands of other entities withdrawing water for agricultural, industrial or commercial purposes statewide. The Program also certifies laboratories that analyze water samples and issues licenses for water samplers, and oversees two professional licensure Boards: the Board of Water and Wastewater Systems Operators and the Board of Well Drillers. Because all of these activities reside together in WSP, Maryland has the ability to evaluate and regulate public drinking water systems from a broad perspective that includes an evaluation of the resource for both quantity and quality. WSP's comprehensive approach ensures safe and adequate drinking water for over five million Marylanders, while protecting the sustainability of water resources for present and future Marylanders.

Community and Non-Transient Non-Community Water Systems

WSP regulates approximately 999 community water systems (including municipal, county, and private systems), and non-transient non-community water systems (such as businesses, schools, and day care facilities that have their own water source). These systems must test for over 90 regulated contaminants on schedules that vary based on water source, system type and population.

Transient Non-Community Water Systems

In addition, there are approximately 2,282 transient non-community water systems (such as rest areas, gas stations, campgrounds, and restaurants with their own water source) throughout the State, which are regularly inspected and tested for acute contaminants. Since 1998, WSP has negotiated delegation agreements with county health departments for enforcement of Safe Drinking Water Act regulations for the transient non-community water systems. Seventeen of the twenty-three counties have accepted delegated authority for these systems, and WSP directly enforces the requirements for the six remaining counties.

Drinking Water Laboratory Certification

This program is mandated by the federal Safe Drinking Water Act. The certification assures the reliability of the compliance samples that are analyzed by State-certified laboratories. Providing high quality data is critical to evaluating public water systems, and is the primary means of evaluating the safety of the drinking water supplies. The laboratories that are certified under this program are also used by the county health

departments and other MDE programs to analyze drinking water for private wells, and for investigation of underground storage tanks.

Water Appropriation and Use Permits

In order to conserve and protect the State's water resources, WSP regulates water withdrawals and diversions through a permitting system. Water uses for most purposes, including public supply, business, institutional, subdivision of land, or agricultural use over 10,000 gallons per day (gpd), require a permit. Groundwater users of 5,000 gpd or less may file for a Notice of Exemption in lieu of obtaining a permit unless the use is by a community water system, or within a designated water management strategy area. Maryland regulates water use under the doctrine of reasonable use, which means the quantity must be reasonable for its intended purpose, and the impacts of the use to the natural resources of the State must not be unreasonable.

Board of Waterworks and Waste Systems Operators

In order to protect the quality of water in Maryland, protect public health and prevent pollution, WSP oversees a state-wide certification program for operators and superintendents of water treatment plants, water distribution systems, wastewater treatment plants, wastewater collection systems, industrial wastewater facilities and certain pretreatment facilities that discharge to sanitary sewers. Certification helps to protect public health and the environment by setting minimum education, experience, and examination standards that applicants must satisfy.

Board of Well Drillers

As part of Maryland's strategy to assist in the orderly development and protection of its groundwater resources, and protect the public interest, the State Board of Well Drillers was created in 1968. The Board of Well Drillers is responsible for regulation of individuals who engage in the practice of well drilling, and installation of water pumps and water conditioning equipment. The Board sets standards and administers qualifying examinations to license individuals who drill water wells, or install water pumps or water conditioning equipment. The practice of well drilling includes engaging in any of the following activities for profit: (1) Making, altering, repairing or sealing a well; or (2) Installing, altering, repairing or disconnecting well system equipment.

PROCESS

Community and Non-Transient Non-Community Water Systems

WSP uses a multi-tier approach to ensure that public drinking water systems in Maryland are able to provide a safe and adequate supply of drinking water to their consumers. This approach includes review and approval of potential water sources and construction plans; evaluation of a new system's technical, financial, and managerial capacity; regular inspection of drinking water facilities; close oversight of water quality monitoring; and ensuring licensed operators are employed by water treatment facilities.

Public water systems are required to conduct routine sampling of their water quality. The type and frequency of analysis depend on the type of system, its population, and the vulnerability of its water supply. WSP reviews and evaluates more than 50,000 water quality records each year. Emphasis is placed on preventive measures to avoid serious public health incidents. The vast majority of drinking water violations are corrected

immediately, or following the issuance of a Notice of Violation. Systems must notify their consumers when violations of the Safe Drinking Water Act occur.

Transient Non-Community Water Systems

Seventeen of the 23 counties are delegated responsibilities from WSP for transient non-community water systems. These counties conduct routine inspections and ensure that systems are monitored in accordance with State and federal requirements. Transient non-community water systems are required to monitor only for contaminants that have acute health risks, including nitrate, nitrite, and bacteria. In addition to providing funding, WSP provides guidance and training to the counties, and reports health-based violations to EPA for these systems. WSP conducts evaluations on all new public drinking water wells to determine whether groundwater systems are under the influence of surface water. Groundwater systems under the influence of surface water will be required to meet federally-mandated treatment technique requirements, and to conduct additional bacteria monitoring as well as turbidity monitoring. In addition, WSP performs audits of the delegated counties every three years in order to determine that regulations are implemented appropriately.

WSP directly oversees implementation of federal and State regulations for 725 transient non-community water systems in Anne Arundel, Charles, Prince George's, Montgomery, Cecil, and Wicomico counties since these six counties declined acceptance of the delegated program and funding assistance. Oversight includes regular inspections of the systems, enforcement of monitoring requirements, and follow-up to any water quality problems that arise. WSP reports technical and health-based violations to EPA on a quarterly basis for these systems.

Drinking Water Laboratory Certification

The Water Supply Program regulates and certifies 43 in-State and 59 out-of-State laboratories that analyze compliance samples for public drinking water systems. All in-state laboratories are inspected on a triennial basis. In addition, laboratories submit an annual renewal package that includes performance testing results for each approved test method, standard operating procedures, and method detection limit studies. An inspection is required before a laboratory receives certification, or approval for a new test method.

Water Appropriation and Use Permits

The Water Appropriation Permit review process is complex, and requires significant technical and administrative evaluation. All applicants except agricultural users are required to submit the results of aquifer tests and hydrogeologic investigations as part of their permitting process. For agricultural users, WSP staff conducts hydrogeologic investigations on their behalf.

Applicants for new permits or increases in large withdrawals must identify adjacent property owners and notify them of a pending application. WSP verifies the notification list and sends an additional notification, providing a brief summary statement of the potential impacts and providing an opportunity for the public to comment or request an informational meeting. This notice is also published in a local paper. In some cases, WSP may determine that the requested withdrawal could have an unreasonable impact on the water resource and/or other users in the vicinity and, as a result, the permit request is denied or modified.

Since 2014 the Program has used a web-based format database (Water Supply Information and Permitting System) that is geographically based, allowing project managers to observe the relationship between a withdrawal request and other nearby permits.

In FY 2017, 439 water appropriation permits were issued. At the end of the FY 2017, there were 7,813 active permits reflecting a total annual average authorized use of about 10 billion gallons per day.

Board of Waterworks and Waste Systems Operators

In FY 2017, 1,134 new certifications were issued and 1,255 certifications were renewed. At the end of the fiscal year there were 9117 active certifications.

Board of Well Drillers

In FY 2017, 60 new licenses were issued and 446 licenses were renewed. At the end of the fiscal year there were 504 active licenses. The Board took two disciplinary actions against licensed master well drillers in FY2017.

SUCSESSES/CHALLENGES

Community and Non-transient Non-community Water Systems

In FY2017, Maryland continued implementation of the new federal drinking water regulations. These regulations are complex, and, in many cases, result in increased monitoring and capital costs for the regulated communities. WSP provided training and on-site technical assistance for water systems throughout the State. The Program's emphasis on assisting smaller systems to better understand compliance requirements for the existing rules resulted in an overall improved compliance rate for all water systems in Maryland during this period

In FY2017, because of the lead issues in Flint, Michigan, questions regarding whether every State uniformly implements the lead and copper rule became a dominating topic nationally. In Maryland, it required a significant amount of resources be dedicated to this issue. The impact of this water quality problem on Maryland has been limited, but the demand for information placed an additional workload on staff.

There was a large increase in the number of audits for drinking water systems. Beginning in March 2016, the migration of data from the legacy database (Public Drinking Water Information System-PDWIS) to the Safe Drinking Water Information System-State (SDWIS-State) was completed. The new database is designed to capture more of the compliance data that are submitted to MDE by the public water systems allowing the program to audit these additional data.

Transient Non-Community Water Systems

The transient non-community water systems continue to represent a challenge to Water Supply Program and the County Health Departments. Effective April 2016, the Revised Total Coliform Rule added new regulatory requirements for increased testing, and follow-up in the event that coliform bacteria is detected in the drinking water. Additional site visits,

assessments, and special seasonal start-up testing requirements have impacted workloads.

Water Appropriation and Use Permits

During FY 2017, WSP worked with permittees to bring them into compliance. Larger public water systems conduct water audits and submit water loss plans to reduce unaccounted for water. Reviews of the audits showed that many systems need to devote additional resources into reducing the amount of unaccounted-for water. Notices of Violation were sent to permit holders with outstanding reporting requirements, expired permits, and those who used water in excess of their permitted allocation.

Laboratory Certification

In FY 2017, the Laboratory Certification Program met its targeted goal of completing all triennial inspections for the year.

Public Water System Enforcement

As of June 30, 2017, 343 enforcement actions had been issued to community and non-transient non-community water systems. Seventeen of these water systems had violations that were based on exceeding drinking water health standards. The remaining violations were technical violations.

* This activity does not include inspections. Annual or semiannual reports are required for certain water appropriation permits.

Water Supply Program

Water Appropriation Permits

Waterway Construction – Dam Safety

PURPOSE

The purpose of the Dam Safety Division is to ensure that dams and other impoundment structures are designed, constructed, operated, and maintained safely, in order to protect public safety. The Dam Safety Division issues waterway construction permits for new dams and ponds, as well as for modifications to existing water impoundments. In addition, the Dam Safety Division conducts safety inspections of existing dams, conducts construction inspections, and provides technical assistance to dam owners and local Soil Conservation Districts (SCDs).

Many dams in Maryland were constructed decades ago and are now showing signs of deterioration. In order to provide safe service, dams require frequent safety inspections, monitoring, maintenance, and rehabilitation. In addition to larger dams, thousands of smaller dams (typically under 20 feet high) were constructed decades ago with corrugated metal pipe spillways. Often constructed on farms that have since been developed into residential communities, many of these dams are now in poor condition and threaten the safety of residents who live in newer homes constructed downstream of them.

The Dam Safety Division, through its dam inspection, dam owner assistance, permitting, and enforcement activities, seeks to prevent dam failures and the resultant loss of life, property damage, and environmental impacts. In addition to possible loss of life and significant property damage, significant erosion of stream channels and sediment deposition occur downstream of a failed embankment structure. In addition, dam failures can cause significant damage to wetlands and habitat, both aquatic and terrestrial, through the destructive force of the depth and velocity of the flood wave.

AUTHORITY

STATE: Environment Article, Title 5, Subtitle 5; COMAR 26.17.04.05

PROCESS

Dam Safety Division engineers conduct quality assurance inspections. The Compliance Program may inspect the site to determine whether construction has begun, perform sediment control inspections at the request of the Dam Safety Division, or respond to citizens' complaints.

Dams are classified into three categories according to the consequences of a potential failure:

- High Hazard: loss of life and significant property damage
- Significant Hazard: property/infrastructure damage
- Low Hazard: damage to floodplain and the dam itself

The inspection frequency is based on national guidelines and is responsive to the potential failure consequences as follows:

Hazard Class	Number in Category	Inspection Frequency	Sites Targeted/Year
High	89	Annually	89
Significant	125	Every 3 years	42
Low	292	Every 5-7 years	50
Total	506	--	181

Based upon the inspection findings, the Dam Safety Division may initiate enforcement actions, varying from a letter advising the owner to correct routine deficiencies up to issuing an order requiring immediate repairs to be performed or removing the structure due to an unsafe condition. MDE does not have the statutory authority to collect administrative or civil penalties for this program. However, MDE has statutory authority to collect criminal penalties.

SUCCESSSES/CHALLENGES

The Dam Safety Division performed 228 inspections of inventory dams in FY 2017. A total of 75 “high hazard” dams out of 89 have been inspected with the remaining structures scheduled for inspection by the end of calendar year 2017. In addition, the Division inspected sites with permits to construct new dams, reinspected existing dams when problems were found during the initial inspection, and inspected SCD ponds and Natural Resources Conservation Service dams.

As shown below, 665 permits were in effect as of the end of FY 2017. This number reflects the number of inventoried dams (506) plus the number of maintenance and repair permits issued.

The Division receives many weekly requests for technical expertise regarding small embankment facilities that are not its direct responsibility. The Division hired two additional engineers in FY 2017 to address this issue. The Division also engages the soil conservation districts and local county stormwater management officials in helping with this workload. The Division will continue these efforts in the future.

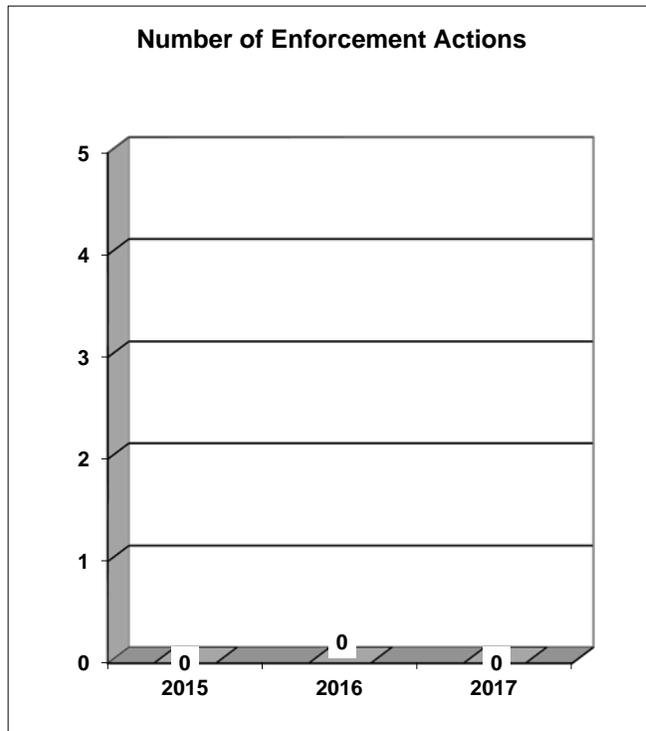

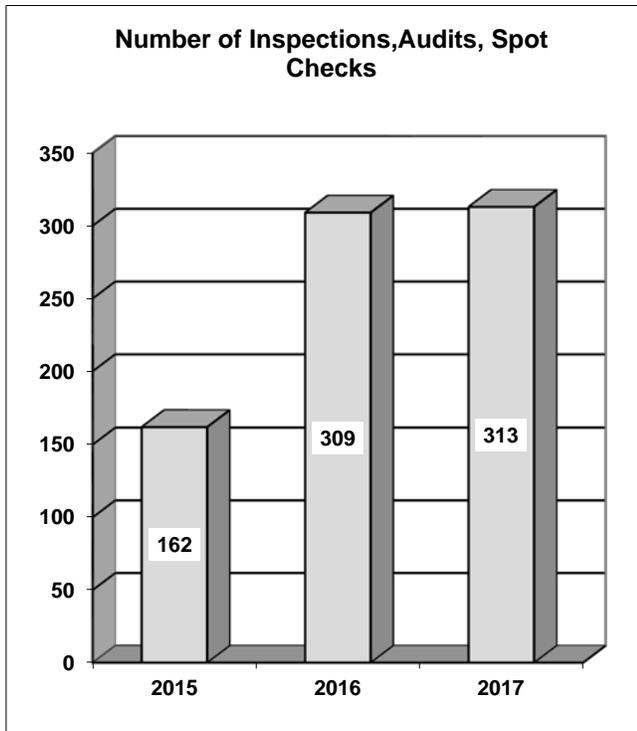

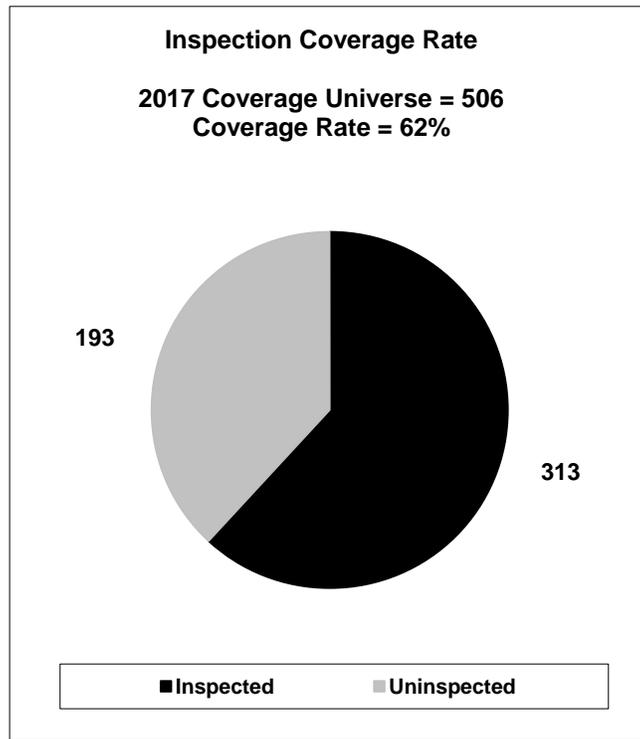

In past years, a significant compliance concern for Division is that many of Maryland’s high and significant hazard dams lacked current Emergency Action Plans, which are critical for storm preparedness and public safety. In May 2017 the State enacted new legislation requiring that owners of High and Significant hazard dams must submit updated Emergency Action Plans by May 1 of each year.

Waterway Construction – Dam Safety

Wetlands and Waterways Program

Nontidal Wetlands, Waterways, and Floodplain

PURPOSE

The goal of the Nontidal Wetlands Protection Act is to attain no net loss in nontidal wetland acreage and to strive for a net resource gain in non-tidal wetlands over present conditions. One of the mechanisms established by the Act to accomplish this goal is a comprehensive regulatory program that targets all activities that have a potential to adversely impact nontidal wetlands. These activities include the following:

- Removal, excavation, or dredging of soil or materials of any kind;
- Changing existing drainage or flood retention characteristics;
- Disturbance of the water level or water table by drainage, impoundment, or other means;
- Filling, dumping, discharging of material, driving piles, or placing obstructions;
- Grading or removal of material that would alter existing topography; and
- Destruction or removal of plant life.

Through its permit application review process, MDE first prevents wetland loss by requiring the applicant to evaluate project designs that will avoid wetland impacts. Based on this evaluation of alternatives, if MDE finds that impacts are unavoidable, the applicant is required to utilize the project design that will minimize the wetland impacts and provide appropriate mitigation for those impacts.

Mitigation, required for all unavoidable impacts that are authorized by MDE, means that the applicant must replace lost wetland acreage, function and value. This is usually accomplished by requiring the creation of new wetlands, restoration of relic wetlands, enhancement of degraded wetlands or some acceptable combination. MDE may also accept monetary compensation if it is determined that mitigation for nontidal wetland losses is not a feasible alternative. For example, monetary compensation may be accepted if the size of the nontidal wetland loss is less than one acre and a suitable mitigation site cannot be identified within the impacted watershed. The payment is deposited into the State's Nontidal Wetlands Compensation Fund and used by the State to construct non-tidal wetlands throughout Maryland.

In addition, MDE is also responsible for addressing potential impacts to the State's nontidal waterways. Authorization is required to conduct any activity that changes the course, current or cross-section of a nontidal stream or body of water, including the 100-year floodplain. Waterway construction activities are evaluated to ensure that they do not create flooding on upstream or downstream properties. Such activities are additionally evaluated to ensure protection of aquatic resources, including the maintenance of fish habitat and migration, from degradation.

AUTHORITY

STATE: Environment Article, Title 5, Subtitles 5 and 9; COMAR 26.17 and 26.23

PROCESS

MDE inspectors schedule routine inspections of the facilities adhering to the assigned priority. The inspection frequency is adjusted as site conditions or workload demand. Inspections are performed to verify that the projects are in accordance with the authorization. Because a site may involve nontidal wetlands, waterways and/or 100-year floodplain impacts, inspectors evaluate whether all the resultant construction impacts are in accordance with the permits. This may involve identifying or verifying a non-tidal wetland boundary and documenting findings in the inspection report. At sites where there may be 100-year floodplain impacts, it may be necessary to determine the floodplain boundary before project compliance can be determined.

MDE does not have the statutory authority to collect administrative penalties for this program.

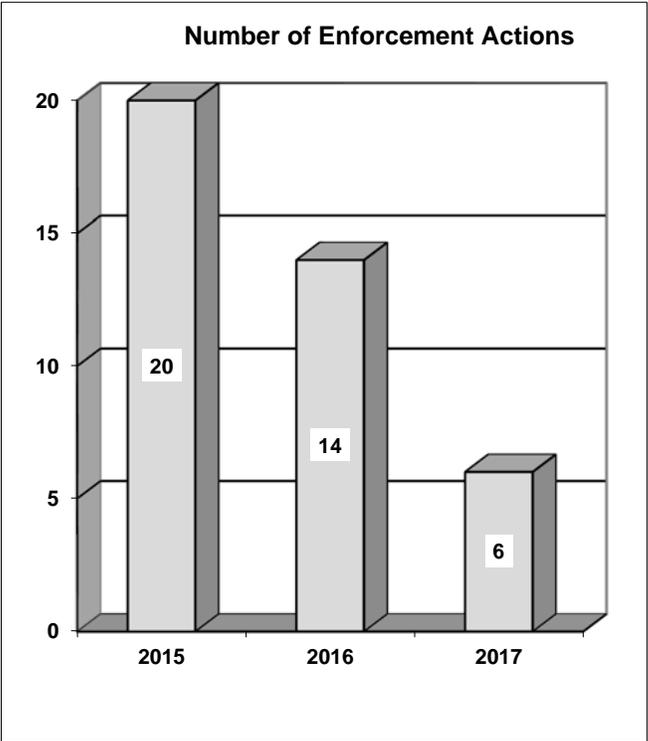

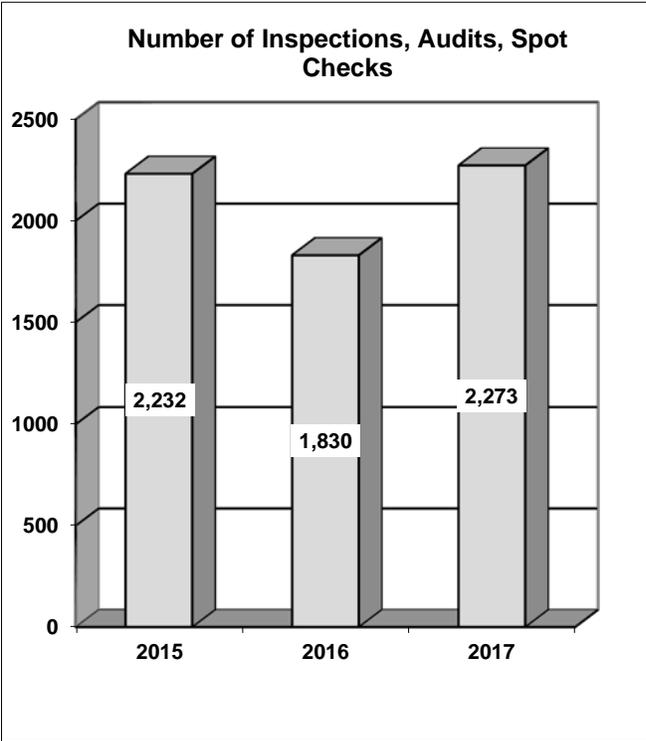

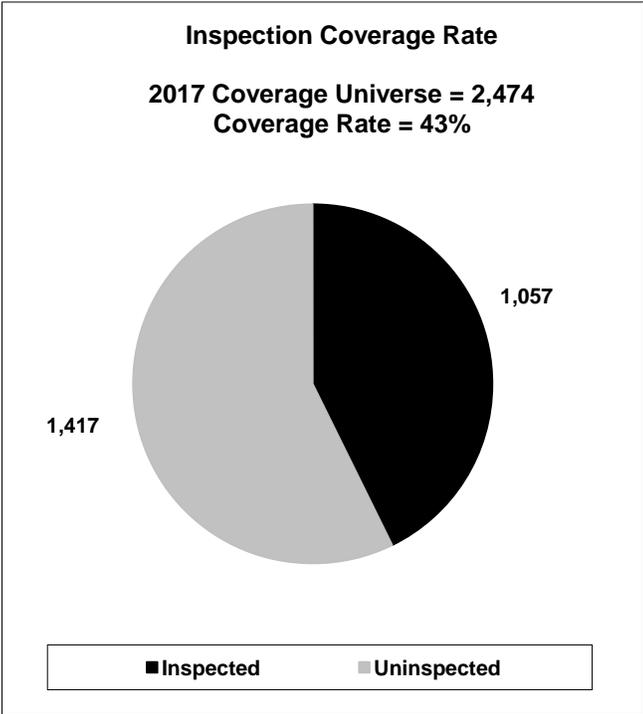

SUCSESSES/CHALLENGES

The program continues to inspect and take enforcement actions to address violations impacting nontidal wetlands and waterways. The program pursues enforcement cases involving nontidal wetlands through referrals to the Attorney General's Office, many as a result of investigation of citizen complaints.

Wetlands and Waterways – Nontidal and Floodplain

Wetlands and Waterways - Tidal

PURPOSE

Tidal wetlands are open water and vegetated estuarine systems affected by the rise and fall of the tide. In 1970, the Maryland General Assembly enacted the Wetlands and Riparian Rights Act to restrict and regulate activities conducted in tidal wetlands in order to preserve and protect them.

Prior to enactment of the Wetlands and Riparian Rights Act wetlands were being destroyed throughout tidewater Maryland every year. Today, through its regulatory program, MDE strives for a net resource gain over present conditions. Tidal wetlands are managed to provide reasonable use while furnishing essential resource protection. Licenses are issued for activities conducted in State wetlands by the Maryland Board of Public Works, based on recommendations from MDE. Permits are issued directly by MDE for activities conducted in private wetlands. A license or permit must be obtained before a person dredges, fills or otherwise alters a tidal wetland.

The following projects require authorization from MDE if conducted in tidal wetlands: dredging or filling; shoreline protection projects, including marsh creation, stone revetments and bulkheads; piers; boat ramps; jetties, groins and breakwaters; cable crossings; storm drain systems; and similar structures. The regulatory process for tidal wetlands is similar to that described for nontidal wetlands and waterways. Applications are evaluated to ensure that appropriate steps are taken to first avoid, and then minimize impacts to tidal wetlands. Mitigation is required for unavoidable impacts, with the amount of mitigation based on resources impacted; type of mitigation proposed; and location of mitigation. In-kind and on-site mitigation is preferred and required wherever appropriate site conditions exist.

AUTHORITY

STATE: Environmental Article Title 16; Subtitle 2; COMAR 26.24

PROCESS

Upon issuance of a license/permit/authorization, the file is transferred to the Compliance Program where an inspection priority is assigned. The inspectors then schedule routine inspections of the facilities adhering to the assigned priority as workload allows. Facilities are not given advance notification of routine inspections. At any time during the process, the inspection frequency can be adjusted as site conditions or workload demand. Inspections typically verify that the work being performed is in accordance with the work authorized and that all license or permit conditions are in compliance.

MDE does not have the statutory authority to collect administrative penalties for this program.

SUCCESSSES/CHALLENGES

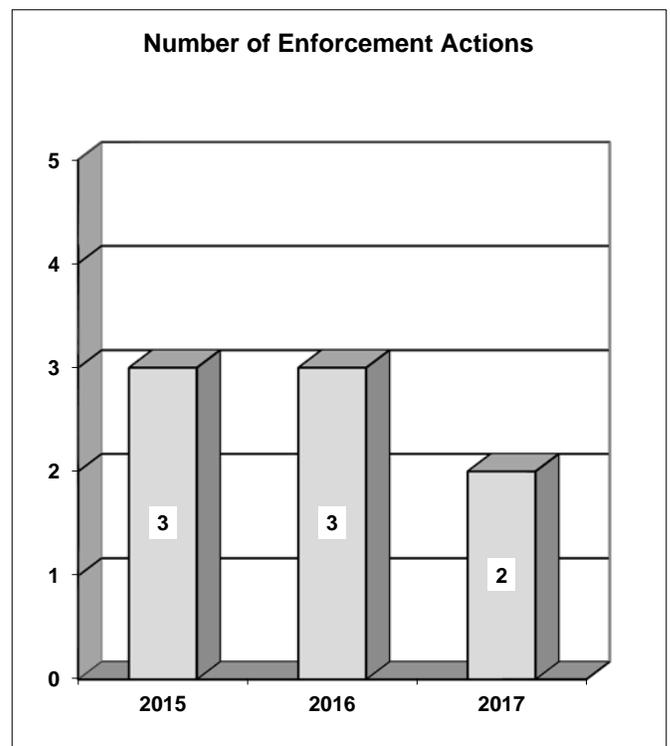

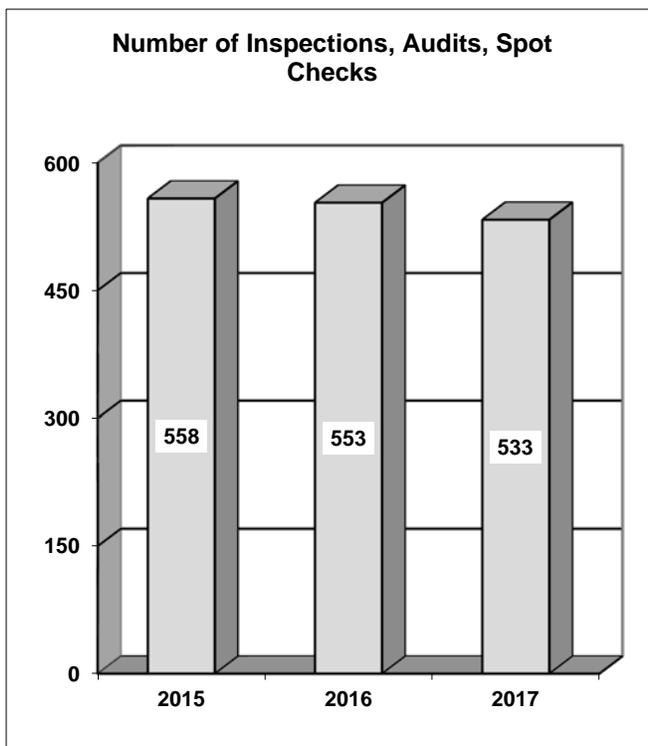

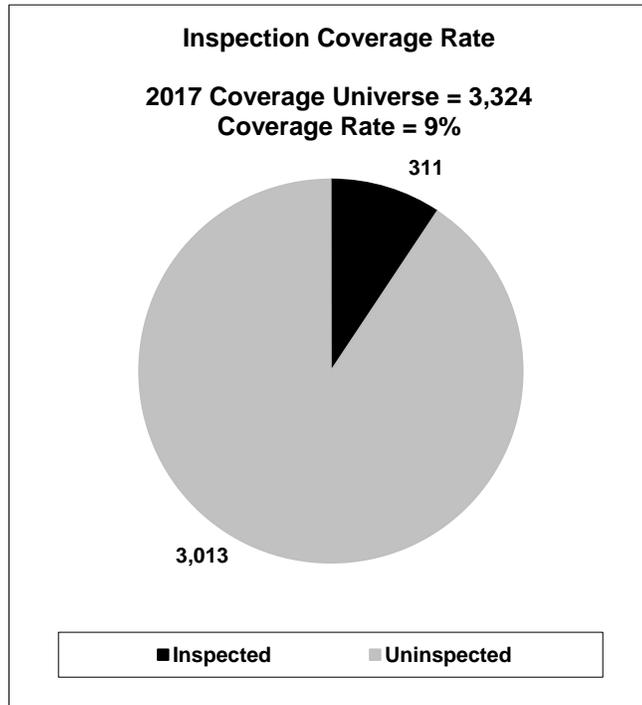

The program actively worked in close cooperation with the Attorney General's Office to resolve numerous cases involving unauthorized impacts to tidal wetlands. Many of the cases are developed as the result of citizen complaints about pier extensions, adding boat lifts or boat houses, or building or extending bulkheads.

The program responds to citizen complaints in to identify the majority of tidal wetlands violations through on-site inspections. Development of improved access to regular aerial photography of tidal coastlines with sufficient staff to review the information to identify work underway that has not been approved by MDE could help identify many other sites in violation. The on-site investigation and enforcement process is impacted by the limited number of inspectors, enforcement staff, and attorneys available to devote to tidal wetlands actions, and many cases will require significant time from identification to conclusion if a court action is needed.

OFFICE OF BUDGET AND
INFRASTRUCTURE FINANCING

Water Supply and Sewerage Construction

PURPOSE

Adequate water and sewer infrastructure is essential to public health and water quality protection. Water and sewerage construction permits help ensure that projects for water and sewerage are designed and constructed in accordance with sound engineering principles and comply with the State design guidelines to protect water quality and public health. These permits are required before installing, extending or modifying community water supply and/or sewerage systems including treatment plants, pumping stations and major water mains and sanitary sewers greater than 15 inches in diameter. These permits also help to ensure compliance with local comprehensive land use and water and sewerage plans and are supportive of community revitalization and land redevelopment.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 2, COMAR 26.03.12

PROCESS

Pre-approval: The applicant must show that the proposed water or sewerage facility is included in the current county water and sewerage plans, has a valid NPDES discharge permit (if applicable), and will be operated either publicly or privately under a financial management plan.

Post-approval: The project must be constructed in accordance with the approved plans and specifications. Staff engineers perform inspections to verify the facility is constructed to the approved design and/or the permittee submits “as built” plans or certification that the project was built in accordance with original plans as approved by MDE. Other approvals associated with the construction (i.e. sediment control, wetlands, etc.) are inspected under those media and by those inspectors. This program does not have authority to pursue traditional enforcement actions. For projects where MDE is providing funding, construction violations would necessitate the return of state funds by the local jurisdiction. If a construction violation were to go unnoticed, the eventual result would be the failure of the facility to meet its discharge permit requirements or other performance requirements. At that time, traditional enforcement tools available under the discharge permit program would be utilized.

There is no correlation between the number of permits issued and the number of sites inspected because inspections are performed only at active construction sites for projects being financed by MDE. Once construction has begun, these funded projects are inspected on a routine basis through completion.

SUCCESSSES/CHALLENGES

MDE monitors all projects for which State financial assistance is being provided. Accordingly, the annual number of inspections will vary as the number of financed projects initiate and complete construction. The program is on target with its goals.

* Program does not have direct legal authority to pursue traditional enforcement actions for violations. It may require the return of State funding if significant problems arise. MDE may indirectly use its general water pollution authority if a constructed facility violates the law.

OFFICE OF THE ATTORNEY GENERAL
ENVIRONMENTAL CRIMES UNIT

Environmental Crimes Unit Executive Summary

The Environmental Crimes Unit (ECU) of the Criminal Division of the Maryland Attorney General's Office investigates and prosecutes environmental crimes throughout Maryland. During FY 2017, ECU handled eighty-seven in-coming inquiries, case-referrals, complaints, and/or requests. Of that total, ECU opened fifty-three criminal investigations. Of the fifty-three investigations, fourteen were the result of referrals from the Maryland Department of the Environment (MDE). Of the fifty-three investigations, twenty-eight were closed at the conclusion of investigation or prosecution, and twenty-five investigations remained open or pending at the close of the 2017 fiscal year. Criminal charges were filed by ECU in eleven cases. Six prosecutions were completed in the state courts during the fiscal year, resulting in ordered jail terms totaling two years, probation terms totaling eight years and criminal fines, restitutions and costs totaling \$40,137.50. Courts additionally ordered community service, restitution and other penalties. The matters investigated and reviewed without opening a full-scale criminal investigation were the result of insufficient information available to justify a full-scale investigation; matters readily resolved; or matters sent to another, more appropriate agency to handle.

Environmental Crimes Unit

PURPOSE

The Environmental Crimes Unit of the Maryland Office of the Attorney General is responsible for the coordination, investigation and prosecution of criminal environmental violations and other associated criminal charges throughout the State of Maryland. Typical environmental cases involve the illegal discharge of pollutants into the waters of the State, the illegal accumulation, storage or disposal of hazardous waste, open dumping, accumulation or disposal of solid waste, violations of natural resource laws, and frauds associated with Maryland's lead paint laws.

Various factors are considered when making the determination whether to pursue criminal enforcement for violations of Maryland's environmental laws. These considerations include: (1) whether there is significant environmental harm and/or long term effects on the public health; (2) whether there is evidence of intentionally deceptive, misleading or fraudulent misconduct; (3) whether the violator was operating outside the regulatory scheme; (4) whether the violations are repetitive; (5) whether the violation(s) were part of an isolated incident or instead a pattern of continuing conduct; and (6) whether the violator(s) has either a prior criminal record or a history of civil/regulatory enforcement action.

In Fiscal Year 2017, the Unit consisted of two Assistant Attorney Generals and two criminal investigators with specialized training and experience in the investigation and prosecution of environmental crimes. Additionally, the Unit coordinates with the U.S. Environmental Protection Agency, the Maryland Department of the Environment, the Maryland Department of Natural Resources and other local, state and federal agencies to prosecute the most significant and egregious criminal violations of Maryland's environmental laws.

AUTHORITY

The General Assembly, through the *Environment Article*, provides the Attorney General exclusive or concurrent authority to prosecute criminal violations stemming from investigations involving water pollution, air pollution and waste. Likewise, the *Natural Resources Article* provides authority for ECU to prosecute certain natural resource cases. Furthermore, the Attorney General's office is granted authority pursuant to Article V, Section 3 of the Constitution of Maryland to investigate and prosecute certain specified crimes as directed by the Governor. Historically the Governor has included authority to investigate and prosecute violations of Maryland's Litter Control Law (§10-110 of the *Criminal Law Article*), and other broadly defined related offenses. The Unit seeks the Governor's authorization to investigate and prosecute other violations not within the *Environment Article* on either a case-by-case basis, or based on specific areas of concern.

PROCESS

The Environmental Crimes Unit receives complaints or allegations of possible criminal activity from multiple sources, including citizen complaints, other governmental and law enforcement agencies, MDE Administrations, or as a result of ECU investigation initiatives. Complaints are initially reviewed by an ECU prosecutor and investigator to determine the appropriateness and available resources for a full investigation. Cases deemed potentially suitable for prosecution are then subjected to a full investigation for the purpose of gathering sufficient evidence to accurately assess whether to file criminal charges. If ECU prosecutors file criminal informations or seek indictments returned by grand juries, the cases are handled by the Unit throughout the trial, subsequent violations of probation and any possible appeals. In FY 2017 ECU handled 6 violations of probation and one on-going appeal of a post-conviction.

MDE REFERRALS

In FY 2017, as a result of MDE referrals, ECU opened 14 new in-depth criminal cases, and filed charges in four cases generated from MDE referrals. Three prosecutions were completed during the fiscal year from cases referred by MDE.

SUCSESSES/CHALLENGES

A continuing challenge is to improve attorney and investigative resources for better effectiveness. It is only through complete and full investigation that criminal cases can be properly assessed and charges filed. The Unit's statewide responsibilities are currently carried out with a smaller staff than in the past, with a total number of five at the end of the fiscal year. This includes two investigators and two prosecutors, all of whom are directly involved in the criminal investigation and enforcement work conducted by ECU. Various outside police agencies which previously had officers assigned to ECU, have removed all staff out of ECU as a result of budget constraints. At this time, there are currently no sworn law enforcement personnel with statewide authority assigned to this Unit. At points in the past there were as many as seven sworn law enforcement officers assigned to the unit for investigation. Since FY 1999, ECU has had no sworn law enforcement officers assigned to the Unit. The lack of sworn police officers assigned to the division limits the actions which ECU can pursue. Additionally, investigations are further slowed with a reduced number of attorneys available to provide investigatory input, review evidence, make charging determinations and pursue prosecutions of each case.

Restoration to higher staffing levels will allow ECU to be more proactive in the pursuit of businesses and individuals who commit environmental crimes, and would allow for more cases to be pursued. These types of cases can be complex and involved, especially in a proactive form, and without full staffing, results will be hampered.

CHART 1 shows the number of investigations conducted by ECU during FY 2017 and the source of the complaints leading to the investigations.

FY '17 – INVESTIGATIONS OPENED		
SOURCE OF COMPLAINTS		INVESTIGATIONS OPENED
M D E	ARA	1
	LMA	13
	WSA	0
	ERD	0
MDE TOTAL		14
OTHER SOURCES		39
TOTAL		53

The MDE administrations, ARA, LMA, and WSA, have traditional enforcement programs. The Emergency Response Division responds to environmental emergencies and they may be caused by criminal activities.

CHART 2 shows the number of cases prosecuted by ECU during FY 2017. The chart distinguishes between the number of cases where prosecution was initiated during FY 2017 and the number of cases concluded during FY 2017. In prosecuting criminal cases, it is not uncommon for charges in a case to be filed during one fiscal year and concluded during a subsequent fiscal year. Charges may also be formally filed in a different fiscal year than when the investigation was opened by ECU.

FY '17 – PROSECUTIONS			
SOURCE OF COMPLAINTS		NO. OF CASES FILED	NO. OF CASES CONCLUDED
M D E	ARA	0	0
	LMA	4	3
	WSA	0	0
	ERD	0	0
	OS	0	0
MDE TOTAL		4	3
OTHER SOURCES		7	3
TOTAL		11	6

CHART 3 The Report of Enforcement Activities mandated by §1-301(d) of the Environment Article requires reporting of information for criminal cases prosecuted under specified subtitles of the Environment Article. The chart reflects all ECU activity for the fiscal year.

FY '17 – YEARLY TOTALS	ENVIRONMENT ARTICLE (EN)		CRIMINAL LAW (CL)	NATURAL RESOURCES (NR)	TOTAL
	Title 1	Title 9	Title 10	NR 4

ENFORCEMENT AREAS INCLUDED IN ANNUAL ENFORCEMENT AND COMPLIANCE REPORT

1. Ambient Air Quality Control
 - a. High-Impact Facilities
 - b. Low-Impact Facilities
2. Air Quality Complaints
3. Asbestos
4. Radiological Health Program
 - a. Radiation Machines Program
 - b. Radioactive Materials Licensing and Compliance
5. Environmental Restoration and Redevelopment
6. Hazardous Waste
7. Lead Poisoning Prevention
8. Oil Aboveground Facilities
9. Oil Pollution Remediation Activities
10. Oil Underground Storage Tank Systems
11. Refuse Disposal
12. Scrap Tires
13. Sewage Sludge Utilization
14. Animal Feeding Operations
15. Natural Wood Waste Recycling
16. Mining – Coal
17. Mining – Non-Coal
18. Oil and Gas Exploration and Production
19. Electronics Recycling
20. Discharges – Groundwater (Municipal and Industrial)
21. Discharges – Surface Water (Municipal and Industrial) State and NPDES Permits
22. Discharges – Pretreatment (Industrial)
23. Stormwater Management and Erosion and Sediment Control for Construction Activity
24. Water Supply Program – Community and Non-transient Non-community Water Systems
25. Water Supply Program – Transient Non-community Water Systems
26. Water Supply Program – Laboratory Certification
27. Water Supply Program – Water Appropriation and Use
28. Waterway Construction – Dam Safety
29. Wetlands and Waterways – Non-tidal and Floodplain
30. Wetlands – Tidal
31. Water Supply and Sewerage Construction
32. Environmental Crimes Unit

APPENDIX C

Environment Article Section 1-301(d)

§1-301(d) Report on Enforcement Activities.

(1) (i) On or before October 1 of each year, the Secretary, in consultation with the Attorney General, shall submit to the Legislative Policy Committee, in accordance with §2-1246 of the State Government Article, a report on enforcement activities conducted by the Department during the previous fiscal year.

(ii) The report shall:

1. Include the information required under this subsection and any additional information concerning environmental enforcement that the Secretary decides to provide;
2. Be available to the public as soon as it is forwarded to the Legislative Policy Committee;
3. Include information on the total number of permits and licenses issued by or filed with the Department at any time and still in effect as of the last date of the fiscal year immediately preceding the date on which the report is filed;
4. Include information concerning specific enforcement actions taken with respect to the permits and licenses during the immediately preceding fiscal year; and
5. Include information on the type and number of contacts or consultations with businesses concerning compliance with State environmental laws.

(iii) The information required in the report under paragraph (3) of this subsection shall be organized according to each program specified.

(2) The report shall state the total amount of money as a result of enforcement actions, as of the end of the immediately preceding fiscal year:

- (i) Deposited in the Maryland Clean Air Fund;
- (ii) Deposited in the Maryland Oil Disaster Containment, Clean-up and Contingency Fund;
- (iii) Deposited in the Nontidal Wetland Compensation Fund;
- (iv) Deposited in the Maryland Hazardous Substance Control Fund;
- (v) Recovered by the Department from responsible parties in accordance with §7-221 of this article;
- (vi) Deposited in the Sewage Sludge Utilization Fund; and
- (vii) Deposited in the Maryland Clean Water Fund.

(3)(i) The report shall include the information specified in subparagraphs (ii), (iii), (iv), and (v) of this paragraph for each of the following programs in the Department:

1. Ambient air quality control under Title 2, Subtitle 4 of this article;
2. Oil pollution under Title 4, Subtitle 4 of this article;
3. Nontidal wetlands under Title 5, Subtitle 9 of this article;
4. Asbestos under Title 6, Subtitle 4 of this article;
5. Lead paint under Title 6, Subtitle 8 of this article;
6. Controlled hazardous substances under Title 7, Subtitle 2 of this article;
7. Water supply, sewerage systems, and refuse disposal systems under Title 9, Subtitle 2 of this article;
8. Water discharges under Title 9, Subtitle 3 of this article;
9. Drinking water under Title 9, Subtitle 4 of this article; and

10. Wetlands under Title 16, Subtitle 2 of this article.

(ii) For each of the programs set forth in subparagraph (i) of this paragraph, the Department shall provide the total number or amount of:

1. Final permits or licenses issued to a person or facility, as appropriate, and not surrendered, suspended or revoked;
2. Inspections, audits, or spot checks performed at facilities permitted;
3. Injunctions obtained;
4. Show cause, remedial, and corrective action orders issued;
5. Stop work orders;
6. Administrative or civil penalties obtained;
7. Criminal actions charged, convictions obtained, imprisonment time ordered, and criminal fines received; and
8. Any other actions taken by the Department to enforce the requirements of the applicable environmental program, including:
 - A. Notices of the removal or encapsulation of asbestos under §6-414.1 of this article; and
 - B. Actions enforcing user charges against industrial users under §9-341 of this article.

(iii) In addition to the information required in subparagraph (ii) of this paragraph, for the Lead Paint Program under Title 6, Subtitle 8 of this article, the report shall include the total number or amount of:

1. Affected properties registered; and
2. Inspectors or other persons accredited by the Department, for whom accreditation has not been surrendered, suspended, or revoked.

(iv) In addition to the information required in subparagraph (ii) of this paragraph, for the Controlled Hazardous Substances Program under Title 7, Subtitle 2 of this article, the report shall include the following lists, updated to reflect the most recent information available for the immediately preceding fiscal year:

1. Possible controlled hazardous substance sites compiled in accordance with §7-223 (a) of this article.
2. Proposed sites listed in accordance with §7-223 (c) of this article at which the Department intends to conduct preliminary site assessments; and
3. Hazardous waste sites in the disposal site registry compiled in accordance with §7-223 (f) of this article;

(v) In addition to the information required in subparagraph (ii) of this paragraph, for the Drinking Water Program, the report shall include the total number of:

1. Actions to prevent public water system contamination or to respond to a Safe Drinking Water Act emergency under §§9-405 and 9-406 of this article; and
2. Notices given to the public by public water systems under §9-410 of this article.

APPENDIX D

MDE Penalty Policy

MDE's Approach to Determining the Appropriate Response to Violations

MDE is committed to a consistent, timely and appropriate compliance assurance program, which is protective of the public health and the environment while creating a credible deterrent against future violations. It is MDE's policy to assess fair and equitable penalties in keeping with the factors specified by the governing statute, and commensurate with the nature of the violations. The statutory factors that MDE must consider in assessing administrative penalties are:

1. The ***willfulness of the violation***, the extent to which the existence of the violation was known to but uncorrected by the violator, and the extent to which the violator exercised reasonable care;
2. Any ***actual harm to the environment or to human health***, including injury to or impairment of the air, waters, or natural resources of this State;
3. The ***cost of cleanup and the cost of restoration*** of the natural resource;
4. The ***nature and degree of injury to or interference*** with general welfare, health, and property;
5. The extent to which the ***location of the violation***, including the location near waters of this State or areas of human population, creates the potential for harm to the environment or to human health and safety;
6. The ***available technology*** and economic reasonableness of controlling, reducing, or eliminating the violation;
7. The degree of ***hazard posed by the particular pollutant*** or pollutants involved;
8. The extent to which the current violation is part of a ***recurrent pattern*** of the same or similar type of violation committed by the violator.

MDE will consider each of the specific factors on a case-by-case basis. While all factors set forth in the statute will be considered, it is not necessary for all of the factors to be applicable before the maximum penalty may be assessed. A single factor may warrant the imposition of the maximum penalty. Furthermore, all factors, even if applicable in a given case, are not necessarily of equal weight in MDE's determination of a reasonable penalty.

APPENDIX E

Environmental Audit Guidance

(Revised 5/15/2006)

The Maryland Department of the Environment (MDE) recognizes the benefit from regulated entities that routinely evaluate their internal work processes for compliance with federal and State environmental requirements. Equally as important as identifying violations is the reporting of such violations to MDE for proper and complete remediation and abatement. MDE encourages self-auditing and compliance management as effective environmental management techniques. MDE may use its enforcement discretion in evaluating penalties for regulated entities that disclose violations of environmental laws or regulations as provided herein.

This guidance is not intended nor should it be construed to be a regulation as defined in Section 10-101, State Government Article. It sets forth criteria and guidelines for use by MDE staff in resolution of enforcement cases, and does not confer any legal rights upon any person.

Definitions

“Department” means the Maryland Department of the Environment.

“Environmental Audit” and “Compliance Management System” have the definitions used in the Environmental Protection Agency’s “Incentives for Self-Policing: Discovery, Disclosure, Correction and Prevention of Violations,” Final Policy Statement effective May 11, 2000:

“Environmental Audit” is a systematic, documented, periodic and objective review by regulated entities of facility operations and practices related to meeting environmental requirements.

“Compliance Management System” encompasses the regulated entity’s documented systematic efforts, appropriate to the size and nature of its business, to prevent, detect, and correct violations through various procedures, policies, mechanisms, and efforts.

“Environmental Requirement” means a requirement in (1) a state or federal law or regulation enforced by the Department, a rule adopted by the Department, a permit or order issued by the Department, or (2) an ordinance or other legally binding requirement of a local government unit under authority granted by state law relating to environmental protection.

“Regulated Entity” means a corporation, partnership, individual, municipality, governmental unit, or any other legal entity regulated under federal, state, or local environmental laws or regulations.

Statement of Guidance

- A. The Department may reduce a civil or administrative penalty for violations of environmental requirements that are voluntarily disclosed following an environmental audit or as a result of compliance management if:
1. The regulated entity discloses the violation to the Department in writing within 21 days after the violation is discovered, or within a shorter time limit, if required by statute or regulation;
 2. The regulated entity promptly initiates action to correct or eliminate the violation and all public or environmental harm caused by the violation. If the violation cannot be fully corrected within 60 days, the regulated entity shall submit a compliance plan to the Department within 60 days for review. The regulated entity shall maintain compliance with the plan as approved by the Department;
 3. The regulated entity provides the Department with a plan that includes steps to prevent recurrence of the violation; and
 4. The regulated entity fully cooperates with the Department regarding investigation of the disclosed violation.
- B. The relief outlined in Section A is not available if the Department determines that:
1. The violation was discovered through a legally mandated monitoring or sampling requirement prescribed by statute, regulation, permit, judicial or administrative order, or consent agreement. The violation must be discovered voluntarily and not as a result of an environmental requirement;
 2. The Department or a third party discovered the violation prior to disclosure by the regulated entity to the Department, or the regulated entity made the disclosure after commencement of a federal, State, or local agency inspection, investigation, or request for information;
 3. The violation was committed willfully, wantonly, intentionally, knowingly, or with gross negligence by the regulated entity;
 4. The regulated entity did not promptly initiate or diligently act to correct or eliminate the violation;
 5. The violation made imminent or caused significant environmental harm or had a significant effect upon public health;

6. The same or a related violation has occurred within the past three years or the violation is part of a pattern of recurrent violations by the regulated entity. For purposes of this section, violation includes any violation of a federal, State or local environmental law or regulation identified in a judicial or administrative order, consent agreement, order or decree, complaint, or notice of violation, conviction or plea agreement; or
 7. The disclosure is made for a fraudulent purpose.
- C. This guidance is not intended for use under circumstances in which the violation(s) at issue would result in the regulated entity gaining an economic advantage over its competitors.
 - D. This guidance does not affect individual liability for criminal misconduct.
 - E. This guidance does not apply to liability under a judicial or administrative order, consent agreement, order or decree, complaint, notice of violation, conviction or plea agreement.
 - F. Relief under this guidance shall not be available if the Department receives formal notification from the delegating federal agency of that agency's intention to propose rescission of the Department's authority over the applicable federal environmental program.

Original signed by Secretary Philbrick
Kendl P. Philbrick
Secretary, Maryland Department of
the Environment

Date

APPENDIX F Supplemental Environmental Projects

A Supplemental Environmental Project (SEP) is an enforcement tool that augments traditional penalty actions. They are important because the projects provide direct environmental benefits to communities beyond those achieved by facilities returning to compliance. The Air and Radiation Administration, the Land and Materials Administration and the Water and Science Administration all made use of SEPs during FY 2016 totaling \$1,019,000. The administrations issued three SEPs during FY 2017. Details about each administration's SEPs are on the following pages.

Administration	Number of SEPs		Total Value of SEPs	
	2016	2017	2016	2017
Air and Radiation Administration	0	1	0	\$15,000
Land and Materials Administration	3	1	\$964,000	\$4,000
Water and Science Administration	3	1	\$1,358,000	\$1,000,000
TOTALS	6	3	\$2,322,000	\$1,019,000

Air and Radiation Administration SEPs, FY 2017

Total SEPs: 1

Total Value: \$15,000

Lifoam Industries - Consent Order signed in October 2016 with penalty & SEP (\$15,000 project) for Electric Vehicle (EV) Charging Stations

Land and Materials Administration SEPs, FY 2017

Total SEPs: 1

Total Value: \$4,000

The Land and Materials Administration issued one SEP in FY 2017 for a lead enforcement case. The SEP required the property owner to replace all windows in their affected rental unit containing lead based paint. The following table lists the individual SEP.

Program	Case #	Property Owner	Description	SEP Value
Lead	16-30-21081	Kim Jensen	1 - SEP, Units Requiring Window Replacement	\$4,000

Water and Science Administration SEPs, FY 2017

Total SEPs: 1

Total Cost: \$1,000,000

NRG Chalk Point – The SEP consists of three projects: oyster restoration in the Potomac River, restoration of Hance Pond, and the installation of a pervious parking lot for the Town of Eagle Harbor.
