Eco-friendly Cosmetic Dental Facility

Member since September 2009

Management and Leadership

Environmentally Preferable Procurement

We have furniture and floors made of recycled products, as well as use paper and toiletries from recycled materials. All of our cleaning agents are environmentally friendly.

Environmentally Preferable Products and Services

Our office does not use mercury-containing amalgam fillings and we use great precautions when removing them.

Environmental Restoration or Community Environmental Projects

On September 22, 2009, we offered tours of our facility as part of our Grand Opening to showcase to the public our facility's green features and practices.

Waste

Solid Waste/Material Use Reduction and Reuse

We use digital records and imaging to reduce paper waste. With our efforts to go paperless and to recycle, we no longer have the need for a waste collection area.

The new Kone Eco-Space elevator that we installed at our facility will also reduce waste because it doesn't require any oil to operate. Hydraulic elevators require 73 gallons of oil to operate at all times. The Eco-Space elevator operates without a hydraulic lift.

Recycling

We recycle paper, plastics, and glass.

Hazardous Waste/Toxic Use Reduction

We are a mercury-free environment and do not use amalgams. We use chemical-free steam-based sterilization and digital imaging to eliminate radioactive waste. We also have low VOC paint and flooring adhesive.

Energy

Energy Efficiency

The Kone Eco-Space elevator installed at our facility reduces energy consumption from 5,873 kWh per year to 2,171 kWh per year. Cosmetic Dental FX also has energy efficient computers.

Other

The President of Cosmetic Dental FX plans to complete the LEED courses to be an Accredited Professional and would like to pursue renovation of an existing building.

Help build a greener, more sustainable Maryland through voluntary practices that reduce environmental impacts and save money.
