Management and Leadership

Environmental Policy Statement

*Smiths Detection Inc. (SDI) is committed to safe working conditions for our employees. The management of SDI is **COMMIT**-ed to make every effort to provide a healthy and safe work environment for its employees. We are dedicated to our goal of preventing and eliminating all occupational injuries and illnesses.*

*Therefore, SDI is **COMMIT**-ed to protecting human health, natural resources, and the environment while promoting and maintaining safe workplaces and practices for our employees, customers, suppliers, visitors and other stakeholders.*

It is SDI policy to integrate Environmental, Health and Safety (EHS) planning into its overall management system through written policies, procedures, training and instructions designed to eliminate environmental hazards and occupational health and safety risks

We will identify and reduce the risks of all types of work activities that have the potential to produce personal injury or occupational illness, provide instructions and supervision to improve employees' understanding of workplace hazards, and ensure that everyone (visitors and contractors) complies with appropriate standards and workplace directions to protect their own and others' health and safety at work.

SDI is committed to continued improvement, prevention of pollution, improving health and safety performance and complying with applicable environmental, health and safety laws, regulations, ordinances and other requirements to which we subscribe.

We all have a shared responsibility to identify activities that present significant environmental, health and safety (EHS) impacts/risks, and to make corrective action in an effort to eliminate those potential impacts/risks.

In line with these commitments, it is the policy of SDI to:

- **Communicate** policies and procedures to facilitate compliance with applicable environmental, health and safety regulations and other requirements.
- **Observe** policies that minimize safety impacts/risks.
- **Measure** and continuously improve our EHS performance.
- **Maintain** compliance with applicable safety and environmental laws and regulations.
- **Identify** and control workplace hazards.
- **Take** the necessary steps to train and communicate our health, safety and environmental commitment to our employees, vendors, customers and stakeholders.

The foundation of our EHS program is participation, empowerment, and training. We all share the responsibilities to follow established policies and procedures, to identify and report potential EHS concerns, maintain relevant documents, be aware of the emergency procedure and evacuation plans at our facilities.

*We are committed to an organizational culture that protects the health and safety of our employees and preserves the environment for future generations. We expect that each employee will **commit** to this culture and our EHS Policy.*

Environmental Team

We have a team including our EHS Manager and Environmental Engineer responsible for implementing and maintaining our ISO 14001 certification and for tracking our environmental metrics related to energy, waste and water consumption. We are also establishing a Green Team as part of our participation in the Regional Manufacturing Institute (RMI) Energy Program.

Annual Environmental Goals

We have a specific goal to segregate and recycle 85% of our solid non-hazardous waste. We track this on a monthly basis.

Independently-Audited Environmental Management System

We currently hold and ISO 14001 Certification and completed a successful surveillance audit in January of 2015.

Waste

Recycling

We currently recycle wood, electronics, paper, cardboard and single-stream recyclables (plastic/cans/glass) in quantities of approximately 3-8 tons per month (60-85% of our total waste). This is tracked on a monthly basis. We have partnered with Integrated Waste Analysis to further leverage recycling and

reuse opportunities for wood, further ability to recycle production waste and to more accurately quantify our recycling materials.

Energy

Energy Efficiency

Approximately 5 years ago, we did lighting and air compressor upgrades to reduce our energy consumption. We are incorporating two processes from other locations and have partnered with RMI to be sure that they are installed and managed in the most sustainable way possible. We track energy usage for the site as a whole and are working through RMI's Energy Program to develop measureable baseline and energy reduction/efficiency data.

Help build a greener, more sustainable Maryland through voluntary practices that reduce environmental impacts and save money.
