# Project background and goals

"How resilient are we?"

### **Resilience Metrics**

*e.g. Number of hazardous waste sites,  
Air quality concentration of PM 2.5*

### **Hazard**

*ex. Flood zone*

### **Vulnerability**

*ex. Social Vulnerability Index*

# Our (iterative) process

1

## Community Lifelines

**Definition**  
A lifeline enables the continuous operation of critical business and government functions and is essential to human health and safety or economic security.

**Purpose**  
 • Avoid Critical Hazards  
 • Minimize Impacts  
 • Identify Vulnerabilities  
 • Ease of Communication

**Assessing**  
 Status → What?  
 Impact → So What?  
 Response → Now What?  
 Limiting Factors → What's the Gap?

**Community Impact**  
Occurs when basic lifeline services or capabilities are disrupted and reduce their

**COMPONENTS OF LIFELINES**

# Collection of community-based plans

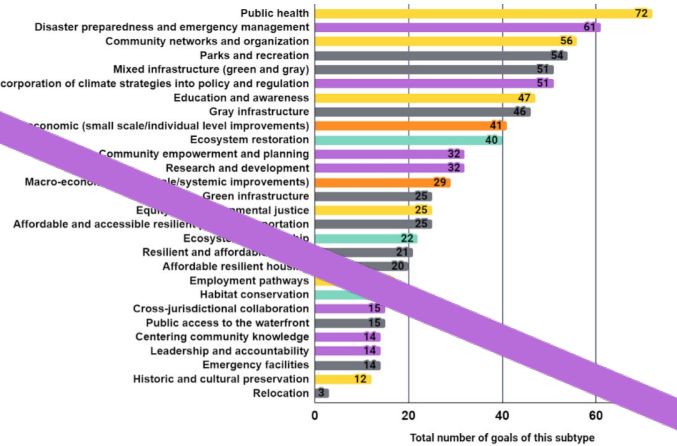

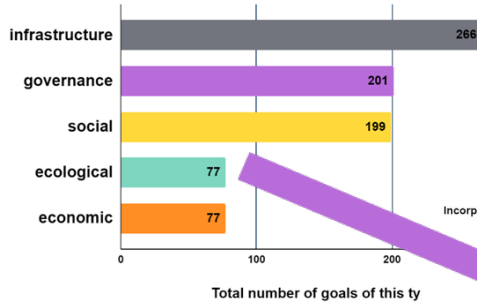

## Welcome to the NYC Climate Resilience Plan Mapper!

October 29, 2022 marked the 10-year anniversary of Hurricane Sandy. This map is intended to highlight the amazing community-led climate resilience work undertaken by organizations across New York City. Mapping these plans, along with government-led place-based plans and those from academic institutions, lets us visualize the community-level response to risks like storm surge, extreme rainfall, and urban heat island effect. This map can also serve as a tool for community groups to see how other communities are rising to the challenges brought on by climate change.

This map is currently in beta, and we plan to update it regularly. If you'd like to provide any feedback or add a resilience plan we're missing, please use [this form](#).

This map is a project of the [Regional Plan Association](#), [Rebuild by Design](#), and [Environmental Defense Fund](#). Special thanks to all of the organizations that shared their plans with us and to Columbia University's [Center for Resilient Cities and Landscapes](#) for sharing additional research.

# Goal consolidation

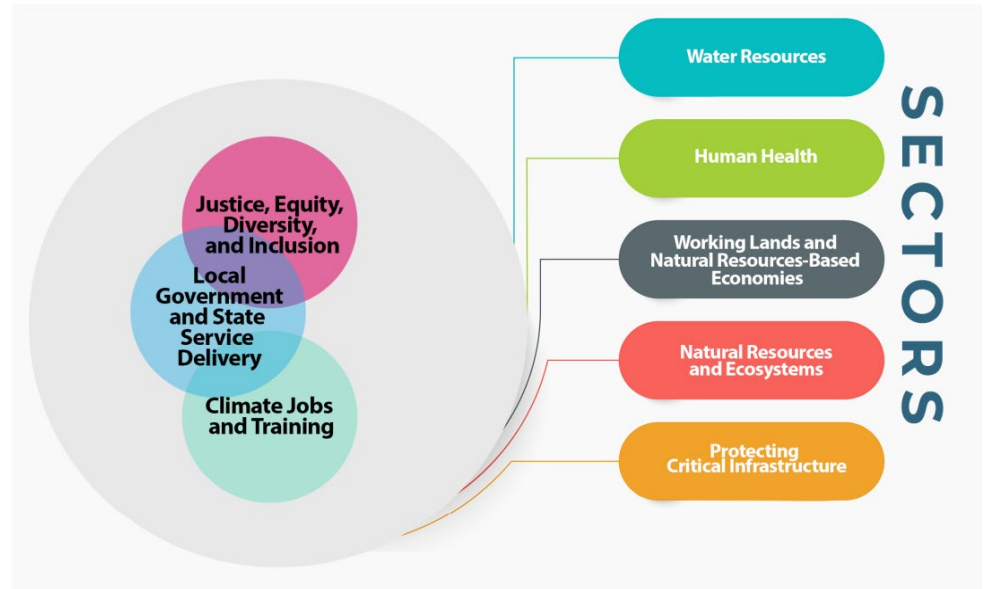

## Consolidated goal themes

1. Education and empowerment
2. Economically and Socially Restorative
3. Healthy Communities
4. Governance
5. Built Infrastructure
6. Shelter
7. Green and Natural Infrastructure
8. Emergency Preparedness and Response

## Final Goal Themes

1. Education and Empowerment
2. Economically and Socially Restorative
3. Healthy Communities
4. Governance
5. Built Infrastructure
6. Shelter
7. Green and Natural Infrastructure
8. Emergency Preparedness and Response

## MD's Focus Areas & Sectors

# Definitions

	Theme	Goal	Indicator	Metric	Target
<b>Definition</b>	A category reflecting commonalities or patterns in the language of multiple goals.	Visions or objectives developed by communities for the core attributes of resilience that support function despite the acute shocks and chronic stressors associated with climate change.	A variable that reflects the degree to which a goal is being addressed.	A specific quantitative or qualitative data stream used to measure the indicator.	A measurable, long-term commitment towards a goal, referencing a specific desired performance level.
<b>Example</b>	Green and Natural Infrastructure	Urban tree canopy is maximized, monitored, and healthy	Condition of urban tree canopy	Number of street trees per acre	Every neighborhood should have a healthy and well monitored tree canopy coverage of over XX%

# Green and Natural Infrastructure

**Goal:** Natural resources and habitats are healthy and maximized, combat urban heat, flooding and other climate impacts, and benefit health

Indicator	Metric	Potential data source
Stormwater is absorbed by natural/green infrastructure	% of local green infrastructure target met	<a href="#">NYC DEP Green infrastructure data</a>
	Gallons of stormwater captured annually by green infrastructure	*not all data sets may be readily available. NYC is also looking at “greened acres” as a measure of amount of stormwater managed by green infrastructure annually
	<i>See also Healthy Communities goal 4.1</i>	
Tree canopy and biomass are healthy, widespread and equitably distributed, providing habitat, carbon storage and cooling	% of trees rated as healthy	<a href="#">New York City Tree Map</a>
	% of tree canopy coverage	<a href="#">Forestry tree points in NYC</a> including “forestry work orders,” “forestry inspections” and “forestry planting spaces”
	Pounds of air pollutants removed annually	<a href="#">NYC land cover raster data</a>  <a href="#">USFS Tree Canopy Cover Dataset</a>

# Built Infrastructure

**Goal:** Climate safe emergency shelters are accessible to all and serve as multipurpose community centers

Indicator	Metric	Potential data source
All residents are within a 15-minute walk or transit trip of a shelter that provides safety from flood and heat exposure	Analysis demonstrates that shelters that provide cooling and safety from flood risks (e.g., elevated out of the floodplain and with unobstructed access to safe egress/transit routes) cover all neighborhoods across the region	TIGER/Line analysis of <a href="#">NYC cooling center location coverage</a>  <a href="#">New York State Department of Health Cooling Center Application</a>
	Locations of shelters and distributional equity across the region	<a href="#">NYC hurricane safe evacuation centers</a>  <a href="#">NYC homeless shelter locations</a>
	<i>See also Emergency Preparedness Goal 8.2</i>	

# Economically and socially restorative

**Goal:** Climate resilience investments are prioritized and flow to communities most vulnerable to the impacts of climate change

Indicator	Metric	Potential data source
Government funding for climate resilience flows equitably	% of climate resilience funding (resilient infrastructure, retrofits and buyouts) annually flowing to designated disadvantaged communities	State and local resilience project budgets and locations  Disadvantaged communities maps

# Applications

## Government managers

- Measure progress, triage resources

## Advocates

- As a report card to hold policymakers accountable

## Community-based organizations

- Self-assess community and leverage financial support

# Mapping the indicators: toxic sites in the floodplain

- ◆ NYC Major Oil Storage Facilities
- ☀ NYC Chemical Bulk Storage Sites
- ⬡ 2021 Toxic Release Inventory Sites
- NPCC 2050 Floodplain

## 2020 Social Vulnerability Index

- 0 - 0.35
- 0.35 - 0.6
- 0.6 - 0.75
- 0.75 - 0.9
- 0.9 - 1

**Thank you!**
