

An aerial photograph of a vast, flat landscape, likely a wetland or marsh. A winding river or stream flows through the center of the image, creating a path that meanders from the top center towards the bottom left. The surrounding land is covered in dense, low-lying vegetation, appearing in shades of brown, tan, and muted green. The overall scene is one of a natural, undisturbed environment.

Next Generation Adaptation Plan

Coastal Resiliency Metrics

- Track gain/loss growth of wetlands across the state (RR#1)
- Create a map of existing and restored aquatic habitat (RR#1)
- Track wetland migration & damaged wetlands to determine if state is on track for no-net loss goals (RR#1)
- Determine amount of currently funded wetland adaptation projects across the state and funding provided (RR#3)
