

Climate Resilience 101

Just Transition Working Group Meeting, Maryland Commission on
Climate Change

March 21, 2025

Robert Macnee, Deputy Director, Climate Resilience Consulting

Climate
Resilience

Climate Change – Establishing a shared language

Climate Change	The various ways in which climate will change and its effects
Climate Mitigation	Actions to reduce greenhouse gas emissions (also called climate action and greenhouse gas mitigation)
Climate Adaptation	Actions to prepare for the types of climate changes already underway and those projected in the future
Climate Resilience	The ability to withstand and adapt to a disturbance

CRC's definition: saving lives, enhancing livelihoods, and saving money amid climate disruption

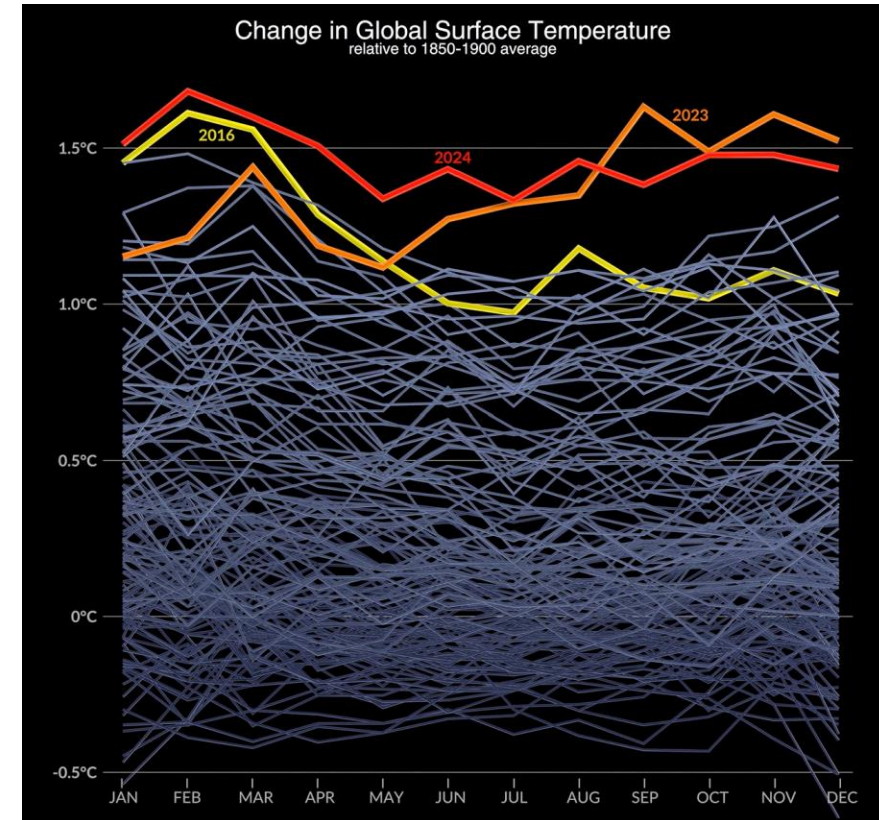

Climate Change – Where are we at?

- Global temperatures have risen ~2°F (1.3°C) since 1880.
- 2024 surpassed 2023 as the warmest year ever.
- Earth warmed faster since 1970 is faster than any period in the last 2,000 years.
- Each of the past four decades was warmer than any previous decade since 1850.

Global Temperature Anomaly (°C compared to the 1951-1980 average)

Monthly T compared to averages 1850-1900

Climate Change – What does it mean for us?

“**Even if global climate mitigation efforts are successful** and greenhouse gas (GHG) emissions are stabilized or radically reduced, **harmful effects from climate change will continue** to occur due to the GHG emissions we, as humans, have already released into our atmosphere.”

Climate Change - Impacts on Maryland's Communities

Common Impacts

- Injury, illness, and death
- Displacement of residents
- Interruption of public services
- Damage to buildings and infrastructure

Sea Level Rise

- increases coastal flooding
- damages natural flood barriers, and
- exacerbates erosion

Erosion

- increases soil loss and loss of land area
- reduces soil and water quality, and
- can be caused by heavy rainfall, sea level rise, and wildfire

Extreme Heat

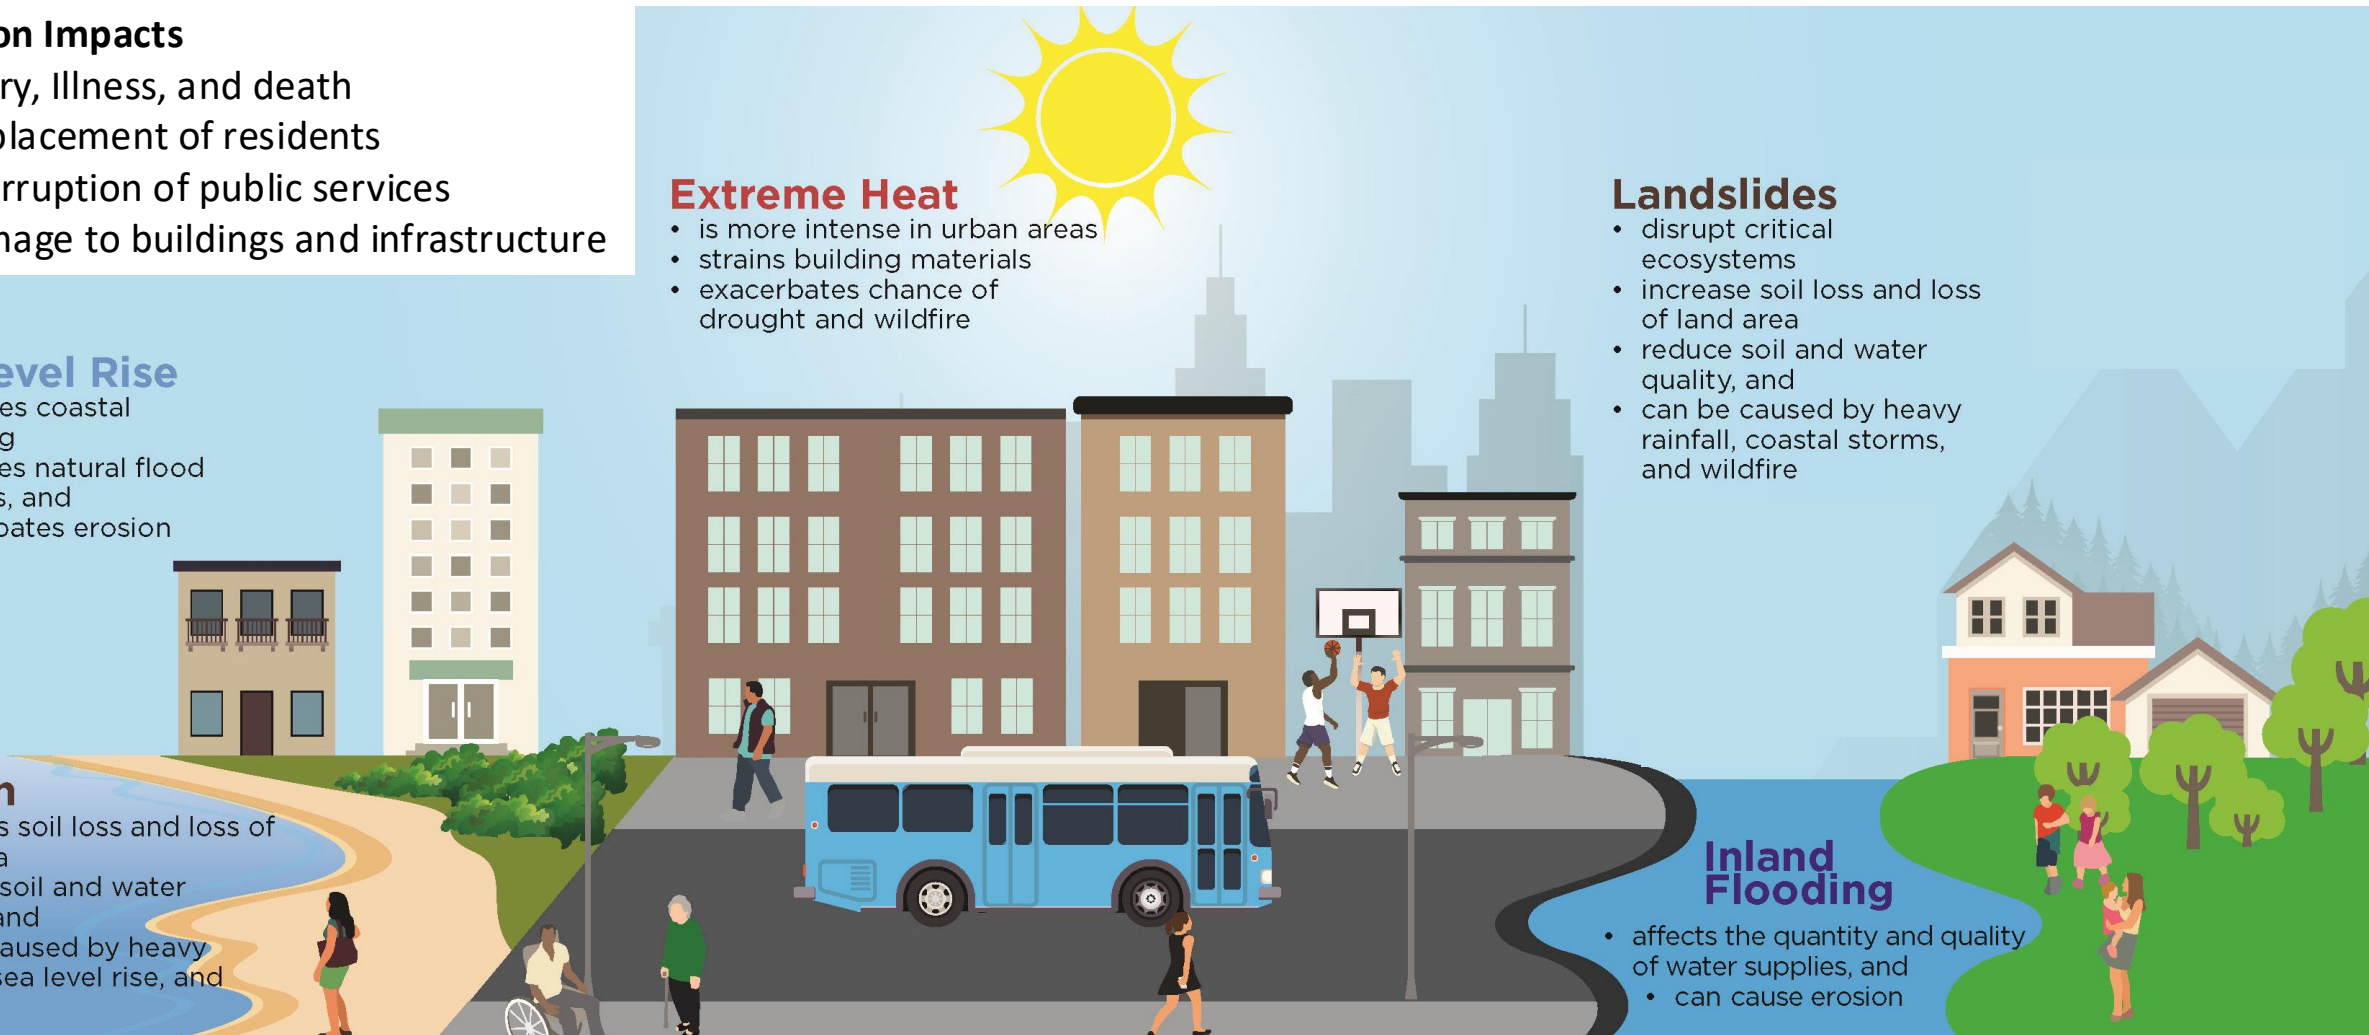

- is more intense in urban areas
- strains building materials
- exacerbates chance of drought and wildfire

Landslides

- disrupt critical ecosystems
- increase soil loss and loss of land area
- reduce soil and water quality, and
- can be caused by heavy rainfall, coastal storms, and wildfire

Inland Flooding

- affects the quantity and quality of water supplies, and
- can cause erosion

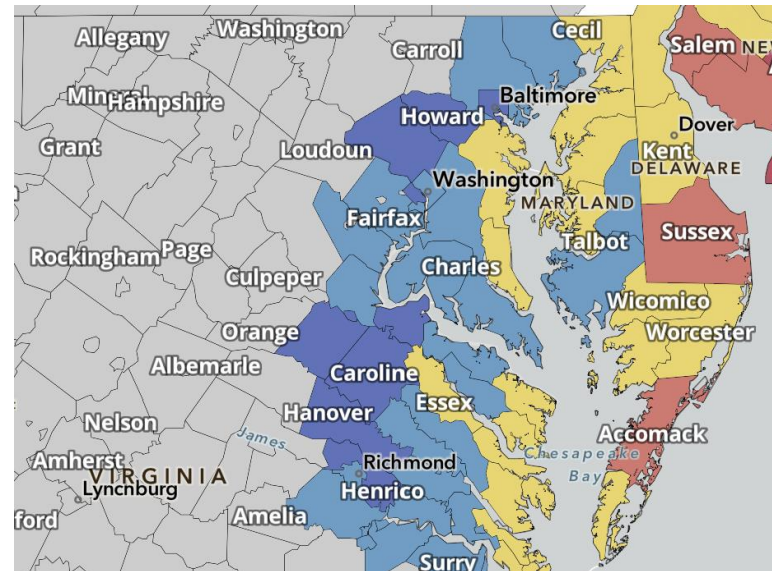

Climate Impacts – Regional variations

Extreme heat risk

Baltimore County: **99.6** percentile

Coastal flooding risk

Worcester: **93.4** percentile

Strong wind risk

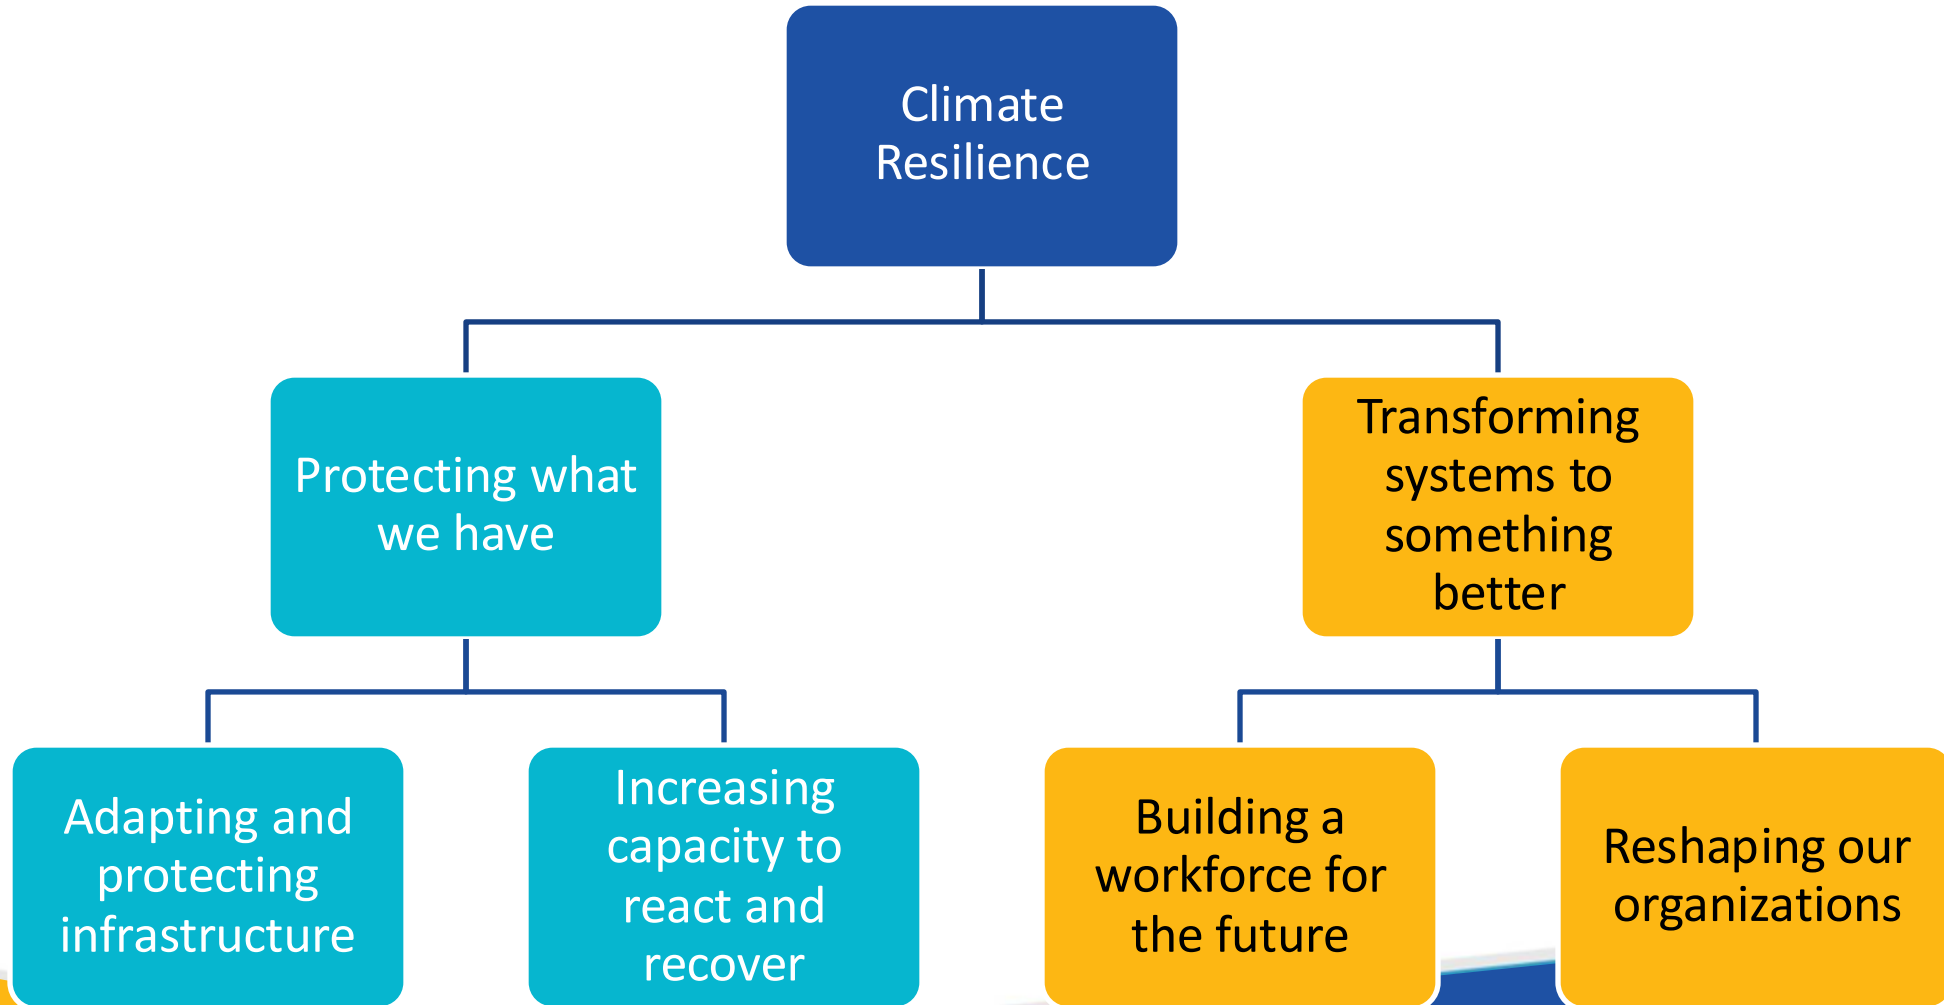

Baltimore City: **96.6** percentile

- Very High
- Relatively High
- Relatively Moderate
- Relatively Low
- Very Low

<https://hazards.fema.gov/nri/map>

Relative risk (according to FEMA National Risk Index) = expected annual loss x vulnerability / community resilience

Approaches to Creating Climate Resilience

Climate Resilience – Community centered approaches

Purpose

- Reduce exposure to hazards
- Educate community members how to prepare for and respond to climate hazards
- Multisolve! Address systemic challenges

Approaches

- **Physical infrastructure projects:** Green infrastructure, nature Based Solutions
- **Emergency resources:** Emergency shelters/equipment
- **Education and services:** Community outreach, access to home-based solutions
- **Training:** Programs to create new routes to employment and a bigger workforce

Outcomes

- Reduced risk to climate hazards
- Stronger, more connected communities
- Economic growth and prosperity

Climate Resilience – Planning and design examples

Climate

Consulting

Bethlehem Lutheran Church | St. Louis, Missouri

Bethlehem Lutheran Church

Food security through development of an urban farm, providing access to fresh, healthy food to residents

Reduced **urban heat island** and flooding using green infrastructure

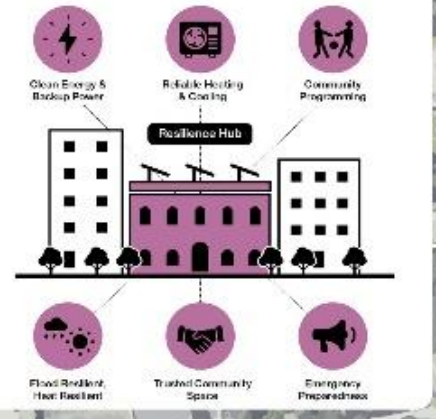

Social cohesion enhanced by outdoor community spaces

Education and job opportunities through a resilience hub offering training and courses in farming and food preparation

Refuge from heat and storms in a new multipurpose energy efficient building

Resilience Hub and Multi-solving | St. Louis, Missouri

Growing Health & Resilience in North St. Louis

GREEN STORMWATER INFRASTRUCTURE
BIOSWALES & RAIN GARDENS TO COLLECT LOCAL RUNOFF - NATIVE PLANTINGS

PLANTED STREET BUFFER
BLOCKS TRAFFIC NOISE - ABSORBS POLLUTION & SLOWS STORMWATER

BLC FARM

HOOP HOUSES

IN-GROUND
PLANTING BEDS

Bethlehem
Lutheran Church
1855-1857

EV FLEETS

BLC | St. Louis, Missouri

PT Partners | Bridgeport, Connecticut

Shoreline restoration to lower risk of coastal flooding

Green infrastructure to reduce **stormwater runoff**

Alternative transport connectivity improvements

Improved **public footpaths and bike lanes**

Vegetative barrier to reduce air pollution

Physical Infrastructure | Bridgeport, Connecticut

Bostwick Avenue Greenway Improvement Program

CONNECTED TO BRIDGEPORT

SAFE & RESILIENT

VEGETATIVE BUFFERED INDUSTRY

CONNECTED TO WATERFRONT

RESTORED COASTLINE

BLACK ROCK HARBOR

SEASIDE PARK

ST STEPHENS RD

PT BARNUM

PT Partners | Bridgeport, Connecticut

WESTSIDE II PARK

Existing Street Section

Proposed Street Section

Eastside Community Network | Detroit, Michigan

Community Resilience Hub Network

Energy efficient community and residential buildings

Workforce training in green technologies and farming

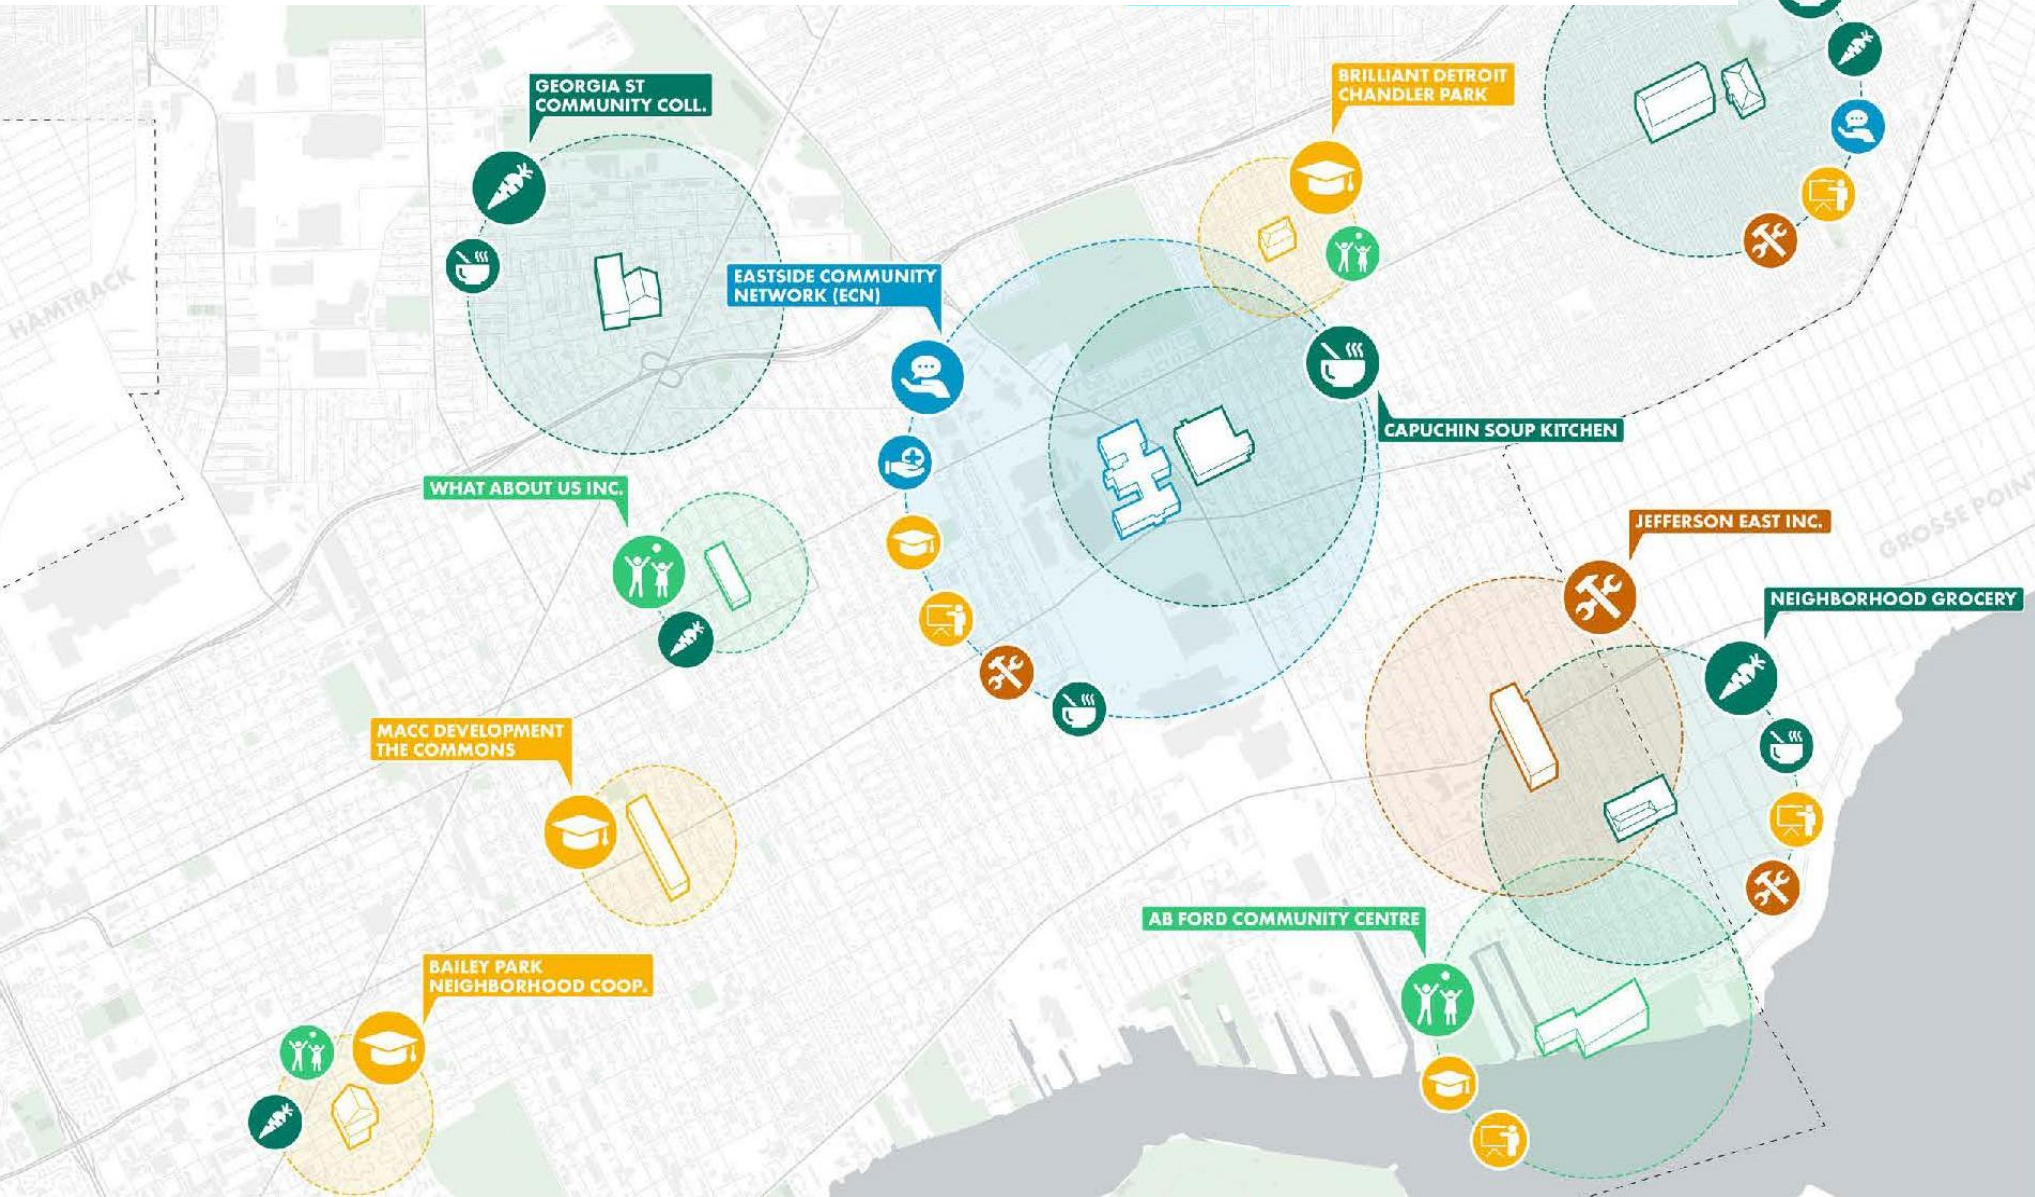

Solar panels and backup generators, reducing reliance on the grid

Improved outdoor safety (lighting, wayfinding) building social cohesion

Services, Education, Training | Detroit, Michigan

Resilient Eastside Initiative

SOCIAL SERVICES

- FOOD DISTRIBUTION / KITCHEN
- URBAN GARDENING / MARKET
- PROFESSIONAL GUIDANCE
- HEALTHCARE
- YOUTH EDUCATION
- WORKFORCE TRAINING
- OUTDOOR PLAY
- REPAIR / MAINTENANCE SERVICES

OUTREACH (NOT TO SCALE)

- LOCAL LEVEL
- NEIGHBORHOOD LEVEL
- CITY-WIDE LEVEL

0 1 1mi 2km

EASTSIDE COMMUNITY NETWORK

Detroit, MI

Key Features

NETWORK-WIDE FEATURES

- Full solar installation with backups
- Roof improvements and upgraded water heaters
- Shuttle services for community access
- Way finding, branding, and signage
- Emergency independence with portable generators

INDIVIDUAL HUBS

- What About Us Inc.: Modular building with a deck for expanded programming, collapsible tents for events.
- Georgia St. Collective: Urban farm with pollinator garden, and life skills training for youth.

EASTSIDE COMMUNITY NETWORK

Detroit, MI

Impact

- Establishes a network of 12 trusted community spaces for resource sharing and programming.
- Enhances food security and life skills through urban farming and pollinator gardens.
- Reduces reliance on the grid with renewable energy, battery backups, and decarbonization.
- Improves neighborhood mental health, safety, and resilience through accessible, sustainable hubs.

Climate Resilience – Resources

[Community Climate Resilience Design Ideas](#): Short video of CRC's community climate resilience design projects

[Resilience Hub Compendium](#): CRC and partners' guide to planning and designing resilience hubs

[HUD Community Resilience Toolkit](#): An overview of common climate-related hazards

[FEMA National Risk Index](#): A comprehensive online mapping tool showing natural hazard risks to guide community planning and resource allocation.

[Risk Factor](#): An online platform providing property-level risk assessments for climate hazards ('Freemium' model)

[Ready to Fund Resilience Toolkit](#): A practical guide to identifying, developing, and funding local resilience projects, tailored for community leaders and decision-makers.

Thank You!
