Instructions for Completing the
Groundwater Discharge Permit Application
For Unlined Rubble Landfills

INTRODUCTION

Section 9-322 of the Environment Article, Annotated Code of Maryland, requires that a permit be
obtained to discharge any pollutant into surface or ground waters of the State. “Discharge” means the
addition, introduction, leaking, spilling, or emitting of any pollutant to State waters or the placing of any
pollutant in a location where it is likely to pollute. Unlined rubble landfills are required by the
Department to obtain a Groundwater Discharge Permit.

You are required to supply information concerning the quality of rainwater percolating through the rubble
landfill cell floor. The Department will evaluate your completed application and notify you of any
additional requirements if necessary.

WASTEWATER (LEACHATE) DESCRIPTION

Provide a description of the process(es) generating the wastewater (leachate) discharge through the
landfill cell floor.

FLOW CALCULATIONS

Determine the daily average volume of wastewater (leachate) discharged through the landfill cell floor.
The volume must be reported in gallons per day.

GROUNDWATER CHARACTERISTICS

Attach a list of the parameters being sampled in the groundwater, their Practical Quantitation Limits
(PQL), and a copy of the latest laboratory analysis report for these parameters. Groundwater samples
must be representative of the quality of the groundwater at the facility. Sample collection, transportation,
storage and analysis shall be performed in accordance with a plan approved by the Department. The
Department reserves the right to require additional groundwater sampling and analysis if necessary.

For questions regarding this application, please contact the Department at (410) 537-3315.
