## FOR THE CALENDAR YEAR 1977

### REVEGETATION IN THE STRIP-MINED REGION

The Bureau of Mines received planting reports during 1975 and 1976 for 1,135 acres that were eligible for revegetation bond release consideration during 1977. Maryland strip mine regulations prohibit revegetation bond release for at least two growing seasons. A growing season is considered from mid-March until mid-September of each year. Of the 1,135 acres eligible for revegetation bond release, 903 acres were released. The remaining 232 acres were disapproved for one of the following four reasons:

- (1) At the annual progress report review conducted during the year the operator agreed to hold the revegetation bond release and consider it when adjacent area is eligible for revegetation bond release.
- (2) More holding time is required because the acres involved were redisturbed and planted after the original planting report was submitted.
- (3) Another growing season is needed to evaluate the required additional revegetation efforts such as topdressing, re-planting bare areas and the planting of trees.
- (4) The operator failed to correct a problem as stated in the annual progress review.

The number of acres that were released indicates an increase in strip mine revegetation activity during 1975 and is the largest number of acres released in any one calendar year to date. However, more important than the number of acres that were released is the high percentage of acres that were released compared to the number of acres eligible for release. This shows that the number of Maryland coal operators that are following their reclamation plans and are meeting the State's reclamation/revegetation standards within the minimum possible time has increased over past years.

During the year the Bureau of Mines coordinated meetings with the Soil Conservation Service, Maryland Forest Service, and Maryland Wildlife Administration to establish a variety of seed mixtures acceptable to all of these agencies for revegetation of cropland, range or pastureland, forestry, and wildlife practices.

The time of planting is the best time and does not necessarily mean that other times for planting a particular species will not produce good results.

P = Permanent

T = Temporary

L = Legume meaning having the ability to fix or produce nitrogen, thus reducing fertilizing requirements and topdressing.

On August 3, 1977, the Federal government enacted a new surface mining law. Revegetation on Maryland surface mined areas will not be changed appreciably because revegetation practices have been maintained at a high standard in recent years.

Maryland will continue to promote research projects and scrutinize reclamation practices to keep its high standards of surface mine revegetation.

### ABANDONED LANDS RECLAMATION

A total of 395 acres of abandoned surface mined area was included in permits issued during 1977. These areas are proposed to be reaffected by the operators during their mining operations and reclaimed under the conditions of their permit at no expense to the State of Maryland.

Also during the year the Bureau entered into 7 contracts with operators for reclamation of abandoned areas. These contracts included the reclamation of 60.0 acres of abandoned mine area at a total cost of \$48,171.00. The source of these funds is the Bituminous Coal Open-Pit Mining Reclamation Fund. Reclamation of 36 acres of abandoned mined land at the site of the former Grantsville dump was accomplished under a \$135,130 construction contract — fund sources were the Mine Reclamation and Water Quality Restoration Loan of 1970 and an Appalachian Regional Commission grant.

In addition, the Bureau either initiated or completed engineering design work for four projects in Allegany and Garrett Counties for the restoration of approximately 147 acres of surface mined lands, 23,000 feet of stream channel restoration work, and the abatement of abandoned mine drainage. The total estimated cost of these projects is approximately \$3,660,000.00. Fund sources for the projects will be the Mine Reclamation and Water Quality Restoration Loan of 1970 and grants from the Appalachian Regional Commission.

Another area of Bureau participation in abandoned mine restoration work is the Deer Park Daylighting project. This is a demonstration project, in cooperation with the U. S. Environmental Protection Agency, to demonstrate the feasibility of abating abandoned deep mine drainage by daylighting — that is, by removing the remaining deep mine workings during surface mining and reclamation operations. The project was initiated in 1973 with construction beginning in 1975. Construction was approximately 65% completed by the end of 1977.

Functions and Duties of The Committee

The Land Reclamation Committee oversees land reclamation activities related to the surface mining of coal in Maryland. It is

## FOR THE CALENDAR YEAR 1977

specifically directed by statute (Annotated Code of Maryland, Section 7-205/b/) to: “. . .study, recommend, and approve all procedures for reclamation, conservation, and revegetation of any area affected by open-pit mining within the state. . .”

Specific duties addressed by the committee during its monthly meetings include:

1. Review and approval of reclamation plans.
2. Review and approval of Annual Mining and Reclamation Progress Reports and Final Reports.
3. Establish amounts of revegetation bond for each operation.

The Land Reclamation Committee visits every site for which mining permit applications have been filed to determine the suitability of the reclamation plan. The Committee also examines sites for purposes of approving annual progress reports and final reports.
