Notes and definitions:

1. Population for 2000 and 2001 populations are based on Census 2000 population count. The Census Bureau had not released population estimate for 2001 when the 2001 Annual Report was released. The 2002 and 2003 populations are adapted from the US Census Bureau five-year age-sex-county specific population estimate for 2002 and 2003. The 2004 population is adapted from the US Census Bureau age-sex population projection at the state level for 2004.
2. Number of tests is based on the highest venous or the highest capillary blood lead test that the Childhood Lead Registry (CLR) received from laboratories for a given child for each calendar year.
3. Blood lead reports with no or inaccurate date of birth were assumed to be from children under six (6) years of age.
4. County assignment for 2000-2001 is based on child's zip code address. In cases with no or wrong address, the provider's zip code was the basis of county determination. For 2002 and 2003 the county assignment based on priority was child's census tract, child's zip code address, or provider's zip code address. For 2004 provider zip code was no longer the basis of county determination.
5. For information on age specific elevated blood lead level (EBL), or lead poisoning, refer to the supplementary data table #3 of the CLR Annual Reports for each calendar year.
6. Reports with no address were assumed to be from Maryland children with exact address (and county) unknown. As such, the counties total may not equal the total for the state.
