## EXECUTIVE SUMMARY

The Maryland Used Oil Recycling Program (the Program) is administered by the Maryland Department of the Environment (MDE) through a memorandum of understanding (MOU) with the Maryland Environmental Service (MES). The authority for the Program is found in Section 5-1001 of the Environment Article of the Maryland Annotated Code, the *Maryland Used Oil Recycling Act*.

MES is responsible for implementing a statewide program for the construction, operation, and the routine maintenance of used oil collection facilities; providing public education and outreach programs related to the disposal of used oil; and maintaining an information center to educate citizens regarding the proper disposal of used oil. Additionally, MES utilizes the collection sites for the collection of related recyclables, including used antifreeze and oil filters.

MES also administers funding for the purpose of implementing supplemental environmental projects. Specifically, this grant funding is used to assist in the construction of rain shelters to minimize stormwater contact with the used oil collection tanks and is also used to fund the purchase of above-ground storage tanks for new sites, as well as replacements for older sites.

Since 1988, the Program has collected and recycled over 18.9 million gallons of used oil in the State of Maryland. Similarly, the Program has collected and recycled over 1 million gallons of used antifreeze from Maryland do-it-yourself automobile and boating enthusiasts.

During 2020, 415,739 gallons of used oil and 32,739 gallons of used antifreeze were collected from Program-sponsored locations. Additionally, during this period, 155 drums of used oil filters were collected for recycling.

Town of Thurmont

## **INTRODUCTION**

The 2020 Maryland Used Oil Recycling Program Annual Report is provided to the Maryland General Assembly as required by Section 5-1001(g) of the Environment Article, the *Maryland Used Oil Recycling Act*.

The Maryland Used Oil Recycling Program (the Program) is administered by the Maryland Department of the Environment (MDE) through a memorandum of understanding (MOU) with the Maryland Environmental Service (MES). MES designates used oil collection facilities, offers technical and financial assistance to establish collection facilities, routinely inspects and cleans Program-sponsored facilities, provides public education, operates an information center, and implements other non-regulatory provisions of the *Maryland Used Oil Recycling Act*. MDE and MES are pleased to provide the following report detailing the accomplishments, initiatives, and progress of the Program during CY20 as well as plans for CY21.

## **BACKGROUND**

The Program was created by the *Maryland Used Oil Recycling Act*, which was enacted in July 1978. Initial start-up funding for the Program was allocated from energy funds. This funding enabled the creation of a program to assist the home mechanic with proper used oil disposal. Farmers and boat owners at marinas also used these facilities for their oil recycling.

MES purchased oil collection tanks, collection boxes, hardware, and signs. County and local governments were solicited to assist in establishing convenient and accessible used oil collection sites for citizens. A variety of collection sites were established. Most are located at government-owned solid waste, public works, and road maintenance facilities.

The Program has been successful at recruiting and maintaining donor locations for several reasons: 1) free collection service of used oil; 2) Program-provided financial assistance for tanks and shelters; and 3) the Program assumes the responsibility for disposing of any contaminated used oil.

## **2019 PROGRAM UPDATES AND ACCOMPLISHMENTS**

Since its inception in 1988, the Program has expanded from 44 collection sites to the current 136 operational sites and has recycled more than 18.9 million gallons of used oil over this time. Collection of used oil from all Program locations yielded 415,739 gallons of used oil in CY20. This was a 15.77% increase from the 359,100 gallons collected in 2019. Historical used oil and antifreeze annual collection results are summarized in graphs at the end of the report. Spreadsheets of the detailed used oil and antifreeze collection records for the participating Program sites are attached as well (Appendix A).

## **Key Updates and Accomplishments**

- Collected and recycled 415,739 gallons of used oil
  - Increased from 359,100 gallons in 2019.
- Collected and recycled 155 drums of used oil filters.
- Added new collection site at St Mary’s Airport.
- Assisted with relocation and new construction of the oil collection site at the Town of Thurmont.
- Replaced/upgraded antifreeze drums at Somers Cove Marina and 5 Wicomico County sites.
- Added oil filter recycling to Washington County.
- Updated multiple sites with new spill pallets, gauges, and fill boxes.
- Performed supplementary cleaning and maintenance at Program-sponsored locations during the year.
  - Eight Harford County sites are cleaned twice weekly (through an independent agreement between MES and Harford County).
  - Enhanced cleanings at 24 sites utilizing the mobile cleaning unit.
  - Oily water removal from 15 sites using our water recovery system.
  - Painted and replaced stickers at more than 15 sites.

## **Administration**

For the past several years prices for used oil have declined, leading collection service providers to reduce or eliminate payment for used oil. As such, most program funding for MES came directly from MDE. In FY19 the funding was \$99,950 and in FY20 the funding was \$99,976. While this funding allowed the Program to continue at a most basic level, it was not a sustainable long-term level of funding.

In response to increased prices in the oil market, MES issued a public bid for collections in April 2020. The winning bid was a price per gallon ranging from \$0.00 to \$1.00 of used oil depending on the market price average, leading to an estimated \$52,500 in FY21. MDE continued to provide the new baseline level of support for FY21, funding the program at \$99,976. This funding, coupled with expected revenue from the new collection contract, brings the total program funding to \$152,476.

## **Operation and Maintenance**

Good housekeeping practices are important aspects of spill control and contamination prevention. As part of its management of the Program, MES has conducted on-site audits of all Program-sponsored collection facilities to ensure that sponsors, recycling coordinators, site supervisors, and site operational staff are aware of their pollution prevention responsibilities. Additionally, MES staff conducted routine cleaning and maintenance, as necessary, to assist the site hosts in maintaining environmental compliance. During CY20, MES performed supplementary cleaning and maintenance at most Program-sponsored locations.

To reduce costs associated for cleanings and water recovery completed by private contractors, MES developed a mobile cleaning trailer for use at oil collection sites. The trailer, equipped with a power washer, water tanks, and a water recovery system allows staff to thoroughly clean collection sites and recover the resulting oily water. The mobile cleaning trailer was deployed 15 times in 2020 for enhanced cleanings and oily water recovery, resulting in significant savings to the used oil program when compared to contractor cleanings.

MES continually reminds all site hosts that they are responsible for providing day-to-day monitoring and housekeeping of their tanks. Staff assists with housekeeping and compliance as needed, based on the results of routine site inspections. MES maintains a full-time staff to conduct routine site audits and assist with site maintenance and cleaning. Sites are upgraded, as needed, to increase compliance and minimize the potential for impacts to the environment.

Given the concern over proper disposal of used oil, contaminated oil, and unauthorized dumping of trash and hazardous materials, MES continues to urge site hosts to remain in the Program. Because used oil can be easily contaminated with polychlorinated biphenyls, brake cleaning fluids, and other readily accessible chemicals, MES and MDE concur that citizens are better served by local governments staying within the established Program.

### **Public Outreach**

MES and the MDE each maintain a webpage with information related to the Program.

MES' webpage:

[menv.com/service/used-oil-antifreeze-recycling/](http://menv.com/service/used-oil-antifreeze-recycling/)

MDE's webpage: [mde.maryland.gov/programs/Land/OilControl/Pages/UsedOilProgram.aspx](http://mde.maryland.gov/programs/Land/OilControl/Pages/UsedOilProgram.aspx)

From the MES webpage, Marylanders can find the public information number **800-4RECYCLE** (800-473-2925) and an email address to inquire about proper disposal of used oil and antifreeze. MES also has a listing of collection sites by county. Hundreds of calls were made to the public information number in 2020, with most callers requesting information on used oil collection locations.

During CY20, information was provided to the public about the importance of proper handling, disposal, and recycling of used oil and antifreeze via education and outreach events and social media.

## **PLANNED ACTIVITIES FOR 2020**

### **Administration**

- MDE will continue to fund the Program and MES will continue to implement the Program.
- MES will continue the grant program to assist locations in upgrading existing sites.

### **Operation and Maintenance**

- MES will continue annual inspections of all Program-participating sites to ensure continued protection of the environment.
- MES will continue the routine maintenance and cleaning program to ensure safe operation at participating sites.
- MES will continue the tank upgrade program by replacing single-wall 275-gallon tanks with new, more environmentally protective double-wall tanks.
- MES will explore ways to improve automated monitoring of participating sites to deter abuse of the facilities.

### **Public Outreach**

- MES will continue updating and linking the used oil recycling pages and continue public outreach and education at local county events.
- MES will send annual program reports to solid waste managers and recycling coordinators.

- MES will continue membership in the Association of Responsible Recyclers while updating Program participants and citizens with current information, issues, and trends within the industry.
- MES will explore additional ways to market the Program to the public.

APPENDIX A

USED OIL and ANTIFREEZE COLLECTION DATA
