

Powered by Science.  
Inspired by Possibility.

- 40% by 2030 is the first step, not the last.
- Challenge the notion of natural gas as a “bridge fuel”.
- Flexibility must be front and center throughout the decision-making process.

- Quickly establish a methodology for carbon emissions accounting.

- Break down policy and regulatory barriers to beneficial electrification.

- Address the isolation between capacity expansion and distribution system planning.

- Put risk on equal footing with cost in decision-making processes

# Help or hindrance?

- Planning
- Markets
- Operations

# Thank you.
