**SUBJECT: INITIATION OF RECOVERY FROM MW-73C AND MW-82D  
INACTIVE EXXON FACILITY #28077  
14258 JARRETTSVILLE PIKE  
PHOENIX, BALTIMORE COUNTY, MARYLAND  
MDE CASE #2006-0606-BA2**

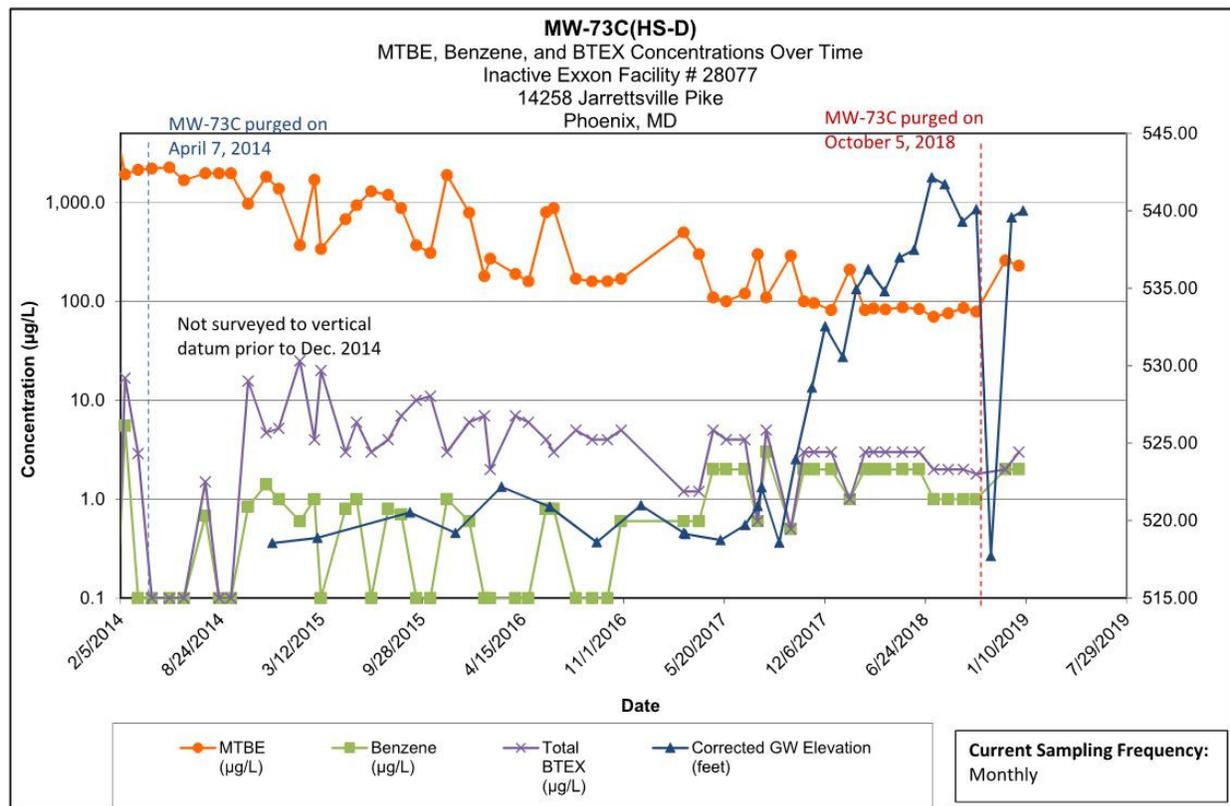

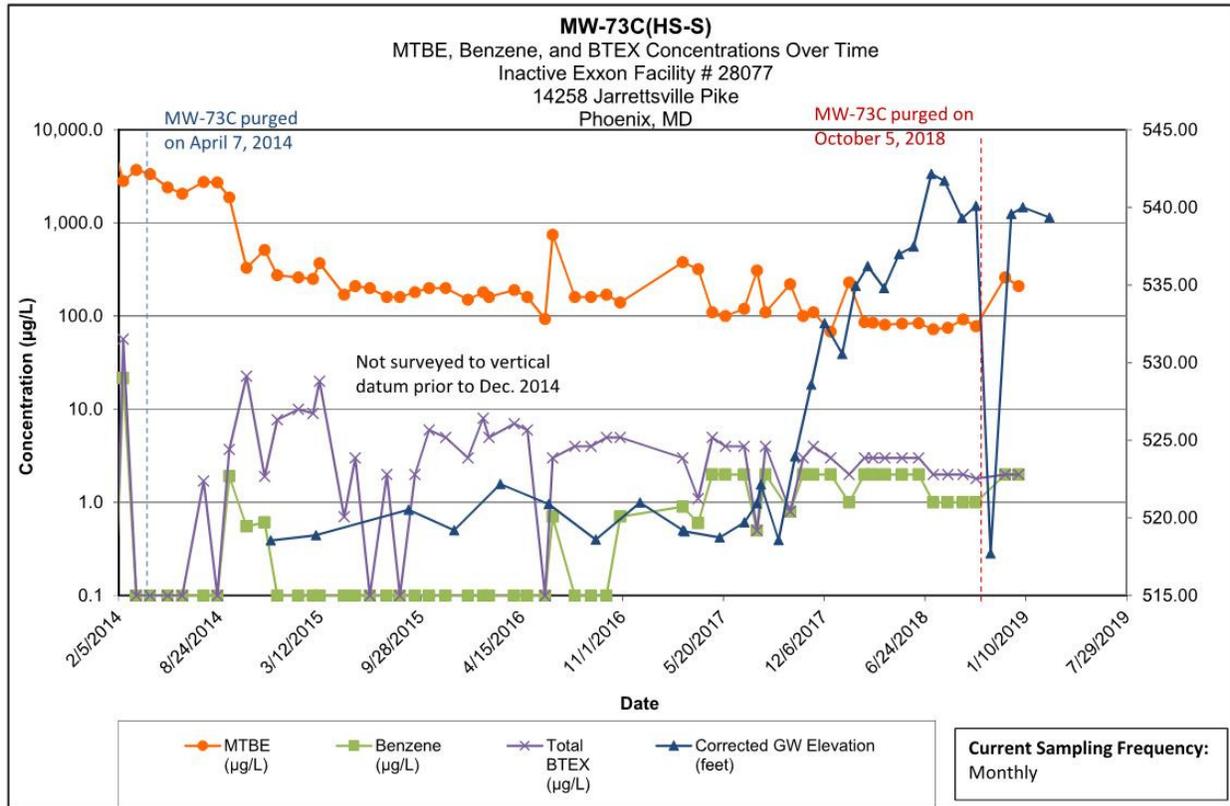

Dear Mr. Ralston:

Kleinfelder, on behalf of ExxonMobil Environmental and Property Solutions (ExxonMobil), herein proposes to connect two existing monitoring wells to the groundwater recovery system. The additional recovery activity is intended to accelerate attainment of MDE actions levels in the area of these wells.

1. MW-73C: Connect MW-73C (located at 14315 Jarrettsville Pike) temporarily to the recovery system via above-ground piping to the vault at MW-178C (located at 3501 Hampshire Glen Court, Figure 1).
2. MW-82D: Initiate recovery from MW-82D, using existing subsurface piping installed when MW-82D was constructed, located at 3508 Hampshire Glen Court (Figure 1).

### **MW-73C**

Monitoring well MW-73C was installed in November 2013 to a total depth of 300 feet below grade (fbg) with 125 feet of 6-inch steel PVC casing and an open borehole from 125-300 fbg. Since installation, elevated concentrations of dissolved-phase hydrocarbons (>100 micrograms per liter ( $\mu\text{g/L}$ ) methyl tert butyl ether [MtBE]) have been observed (Table 1 and Attachment 1) persistently in both shallow and deep intervals. The well has been evacuated twice, in April 2014 and again in September 2018. In the months following the April 2014 purge, MtBE concentrations decreased in both the shallow and deep intervals. Conversely, since the September 2018 purge, MtBE concentrations have risen in both the shallow and deep zones (Charts 1 and 2). Particularly in the deeper zone of the well, MtBE concentrations have historically fluctuated, but have remained above MDE action levels for MtBE. The temporary connection to the treatment system will help determine whether longer-term recovery from MW-73C could result in removal of recalcitrant MtBE impact and establishment of a sustained decreasing MtBE concentration trend.

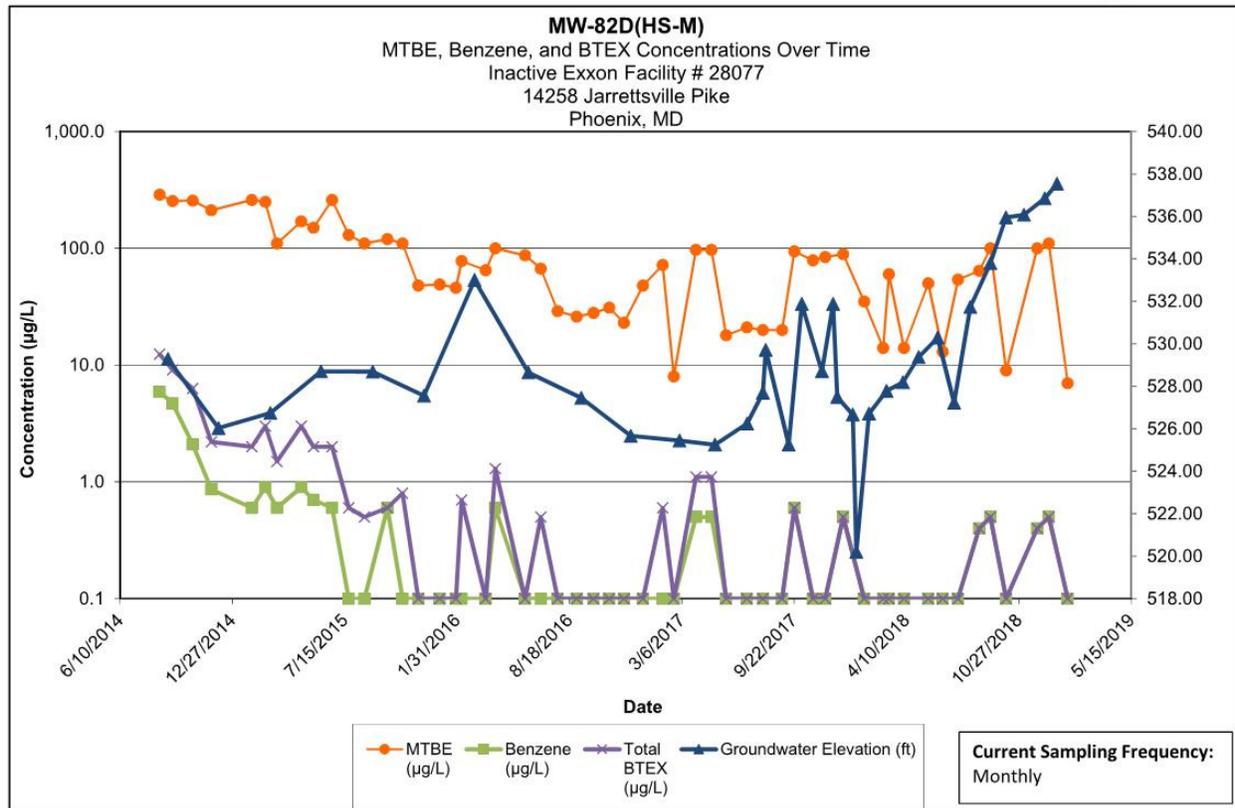

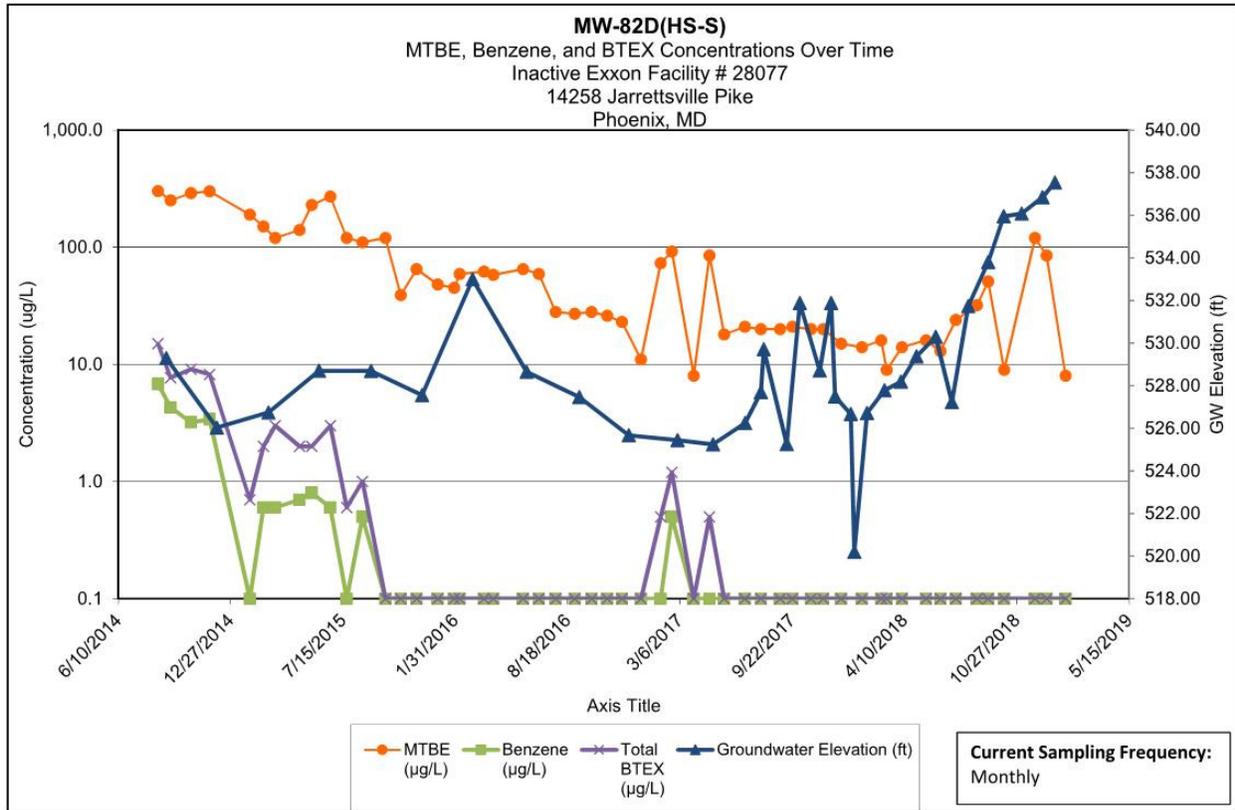

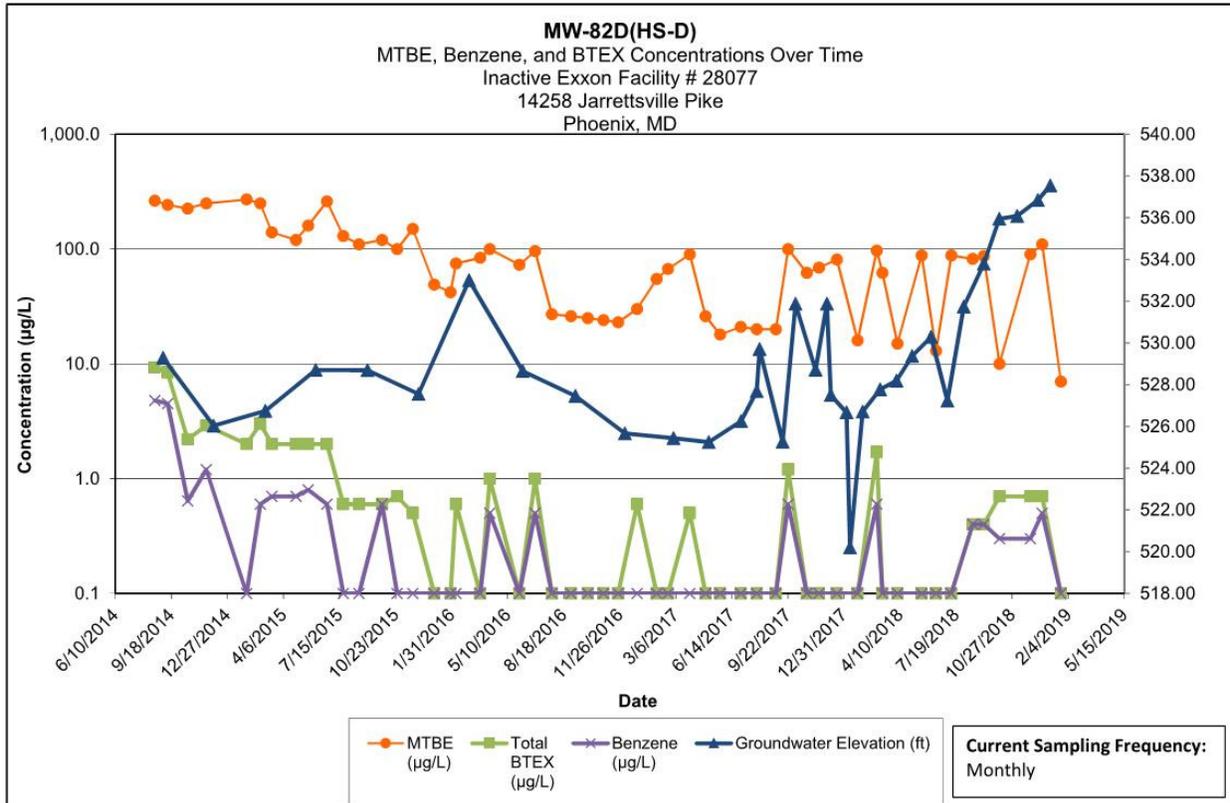

A pump will be installed in MW-73C at approximately 150 fbg, and air supply and groundwater return piping will be connected to the existing subsurface high-density polyethylene (HDPE) piping via temporary above-ground piping terminating in the vault for MW-178C. Following a six-to-eight-month evaluation period, the temporary connection will be terminated and the data will be evaluated to determine whether long-term recovery from MW-73C and subsurface piping is warranted.

Following initiation of groundwater recovery, MW-73C will be sampled monthly for three months and quarterly thereafter. Surrounding monitoring wells MW-38B, MW-73, MW-182, MW-188D and PW-3501 will be gauged on a monthly basis for the first three months. After three months, gauging of the aforementioned wells will return to their approved frequency. Results will be included in the Groundwater Monitoring and Remediation Status Reports submitted to the MDE on a quarterly basis. Increased sampling of additional monitoring wells is not proposed for two reasons: 1) MW-73C exhibits slow recharge and is not expected to have a significant effect on wells within a short timeframe (e.g. 1 month); and, 2) nearby downgradient wells generally do not exhibit MtBE concentrations above MDE action level. Water levels in the supply well serving 14315 Jarrettsville Pike will be monitored via communication with the property owner; any water supply issues will be immediately investigated per the WAP permit, and recovery from MW-73C suspended if necessary.

#### **MW-82D**

Monitoring well MW-82D was installed in July 2014 to a total depth of 380 fbg with 125 feet of 6" steel casing and open hole from 125 to 380 fbg. Since installation and initiation of groundwater recovery from adjacent well MW-82B, dissolved phase MTBE concentrations have decreased, however elevated concentrations of MtBE (>100 µg/L) persist and coincide with a rising groundwater table elevation (Charts 3 and 4).

During installation and surface completion of MW-82D, subsurface conduit was installed from MW-82R to MW-82D. MW-82R is currently connected to the recovery system. A pump is proposed to be installed in MW-82D at a depth of 150 fbg, with the option to lower the pump up to 200 fbg if conditions warrant and with MDE approval.

Following initiation of groundwater recovery from MW-82D, monitoring wells MW-82, MW-106, MW-101A, and MW-101B will be gauged on a monthly basis for the first three months. After three months, gauging of the aforementioned wells will return to their approved frequency. Gauging results will be included in the Groundwater Monitoring and Remediation Status Reports submitted to the MDE on a quarterly basis, and in a Report of Results submitted together with the pumping evaluation of MW-73C.

**LIMITATIONS**

Kleinfelder performed the services for this project under the Enabling Agreement with Procurement, a division of ExxonMobil Global Services Company (signed on November 28, 2012). Kleinfelder states that the services provided are consistent with professional of care defined as that level of services provided by similar professionals under like circumstances. This report is based on the regulatory standards in effect on the date of the report. It has been produced for the primary benefit of ExxonMobil Global Services Company and its affiliates.

## CLOSING

Upon approval from the MDE, Kleinfelder will initiate the scope of work described above. Kleinfelder will continue to evaluate the analytical data and will notify the MDE regarding any change in conditions or implementation of the proposed work plan.

Please contact the undersigned with any questions or requests for additional information at 410.850.0404.

Sincerely,

## KLEINFELDER

Leslie D. Steele  
Principal Engineer

Stacey E. Schiding  
Project Manager

**Table 1 (Continued)**  
**Summary of Groundwater Analytical Results**

Inactive Exxon Facility #28077  
14528 Jarrettsville Pike  
Phoenix, Maryland  
November 25, 2013 through January 31, 2019

**Notes:**

- [R] - Indicates the well was used for remediation at the time of reporting.
- µg/L - micrograms per liter
- AP - above packer
- BP - below packer
- BRL - Below laboratory reporting limits
- BTEX - Benzene, toluene, ethylbenzene, and total xylenes
- DIPE - di-isopropyl ether
- ETBE - ethyl tert butyl ether
- HS - Composite HydraSleeve
- HS-D - deep composite HydraSleeve sampler; set at bottom of open borehole
- HS-S - shallow composite HydraSleeve sampler; set at ½ of open borehole
- J - Indicates an estimated value
- MTBE - methyl tertiary butyl ether
- NA - Not analyzed
- ND(5.0) - Not detected at or above the laboratory reporting limit, laboratory reporting limit included.
- NS - Not sampled
- PW - Inactive supply well being used as a monitoring/sampling location
- TAME - tert-amyl methyl ether
- TBA - tert butyl alcohol

## CHARTS

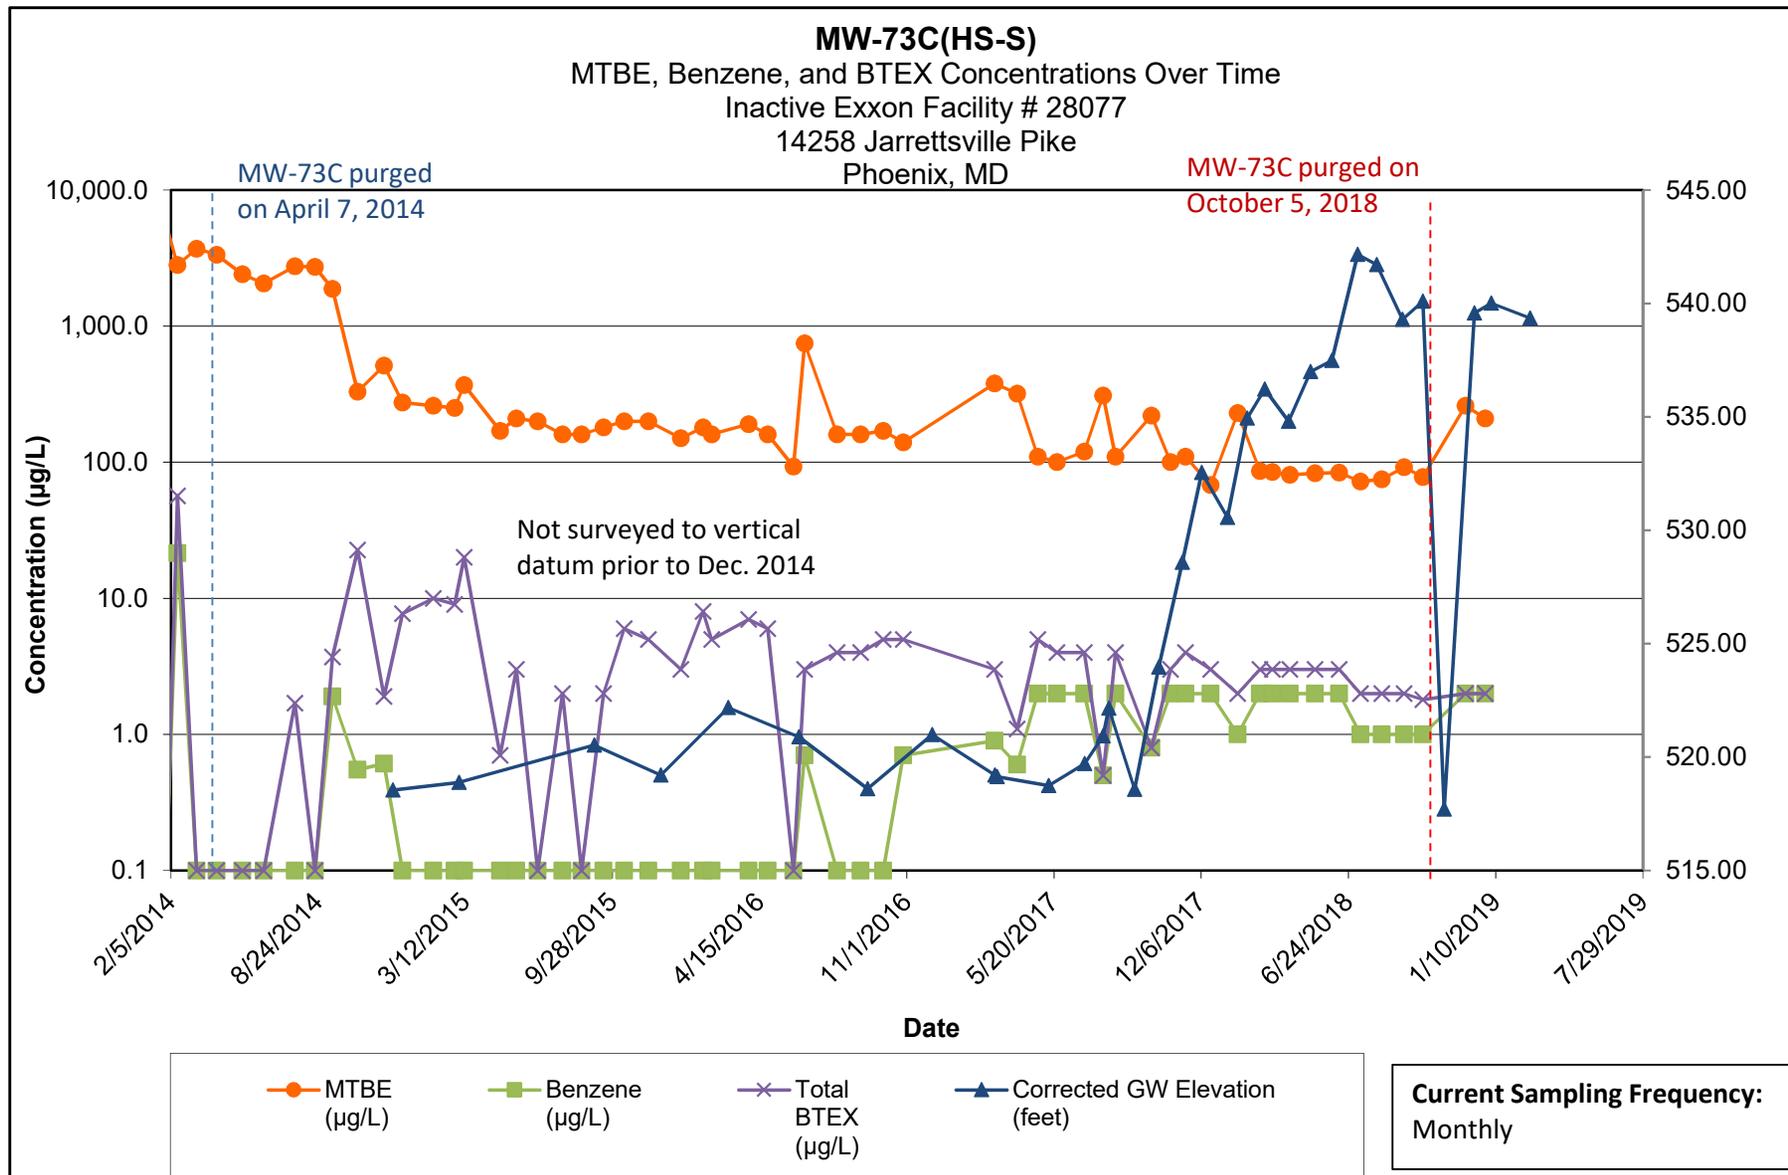

---

## CHART 1

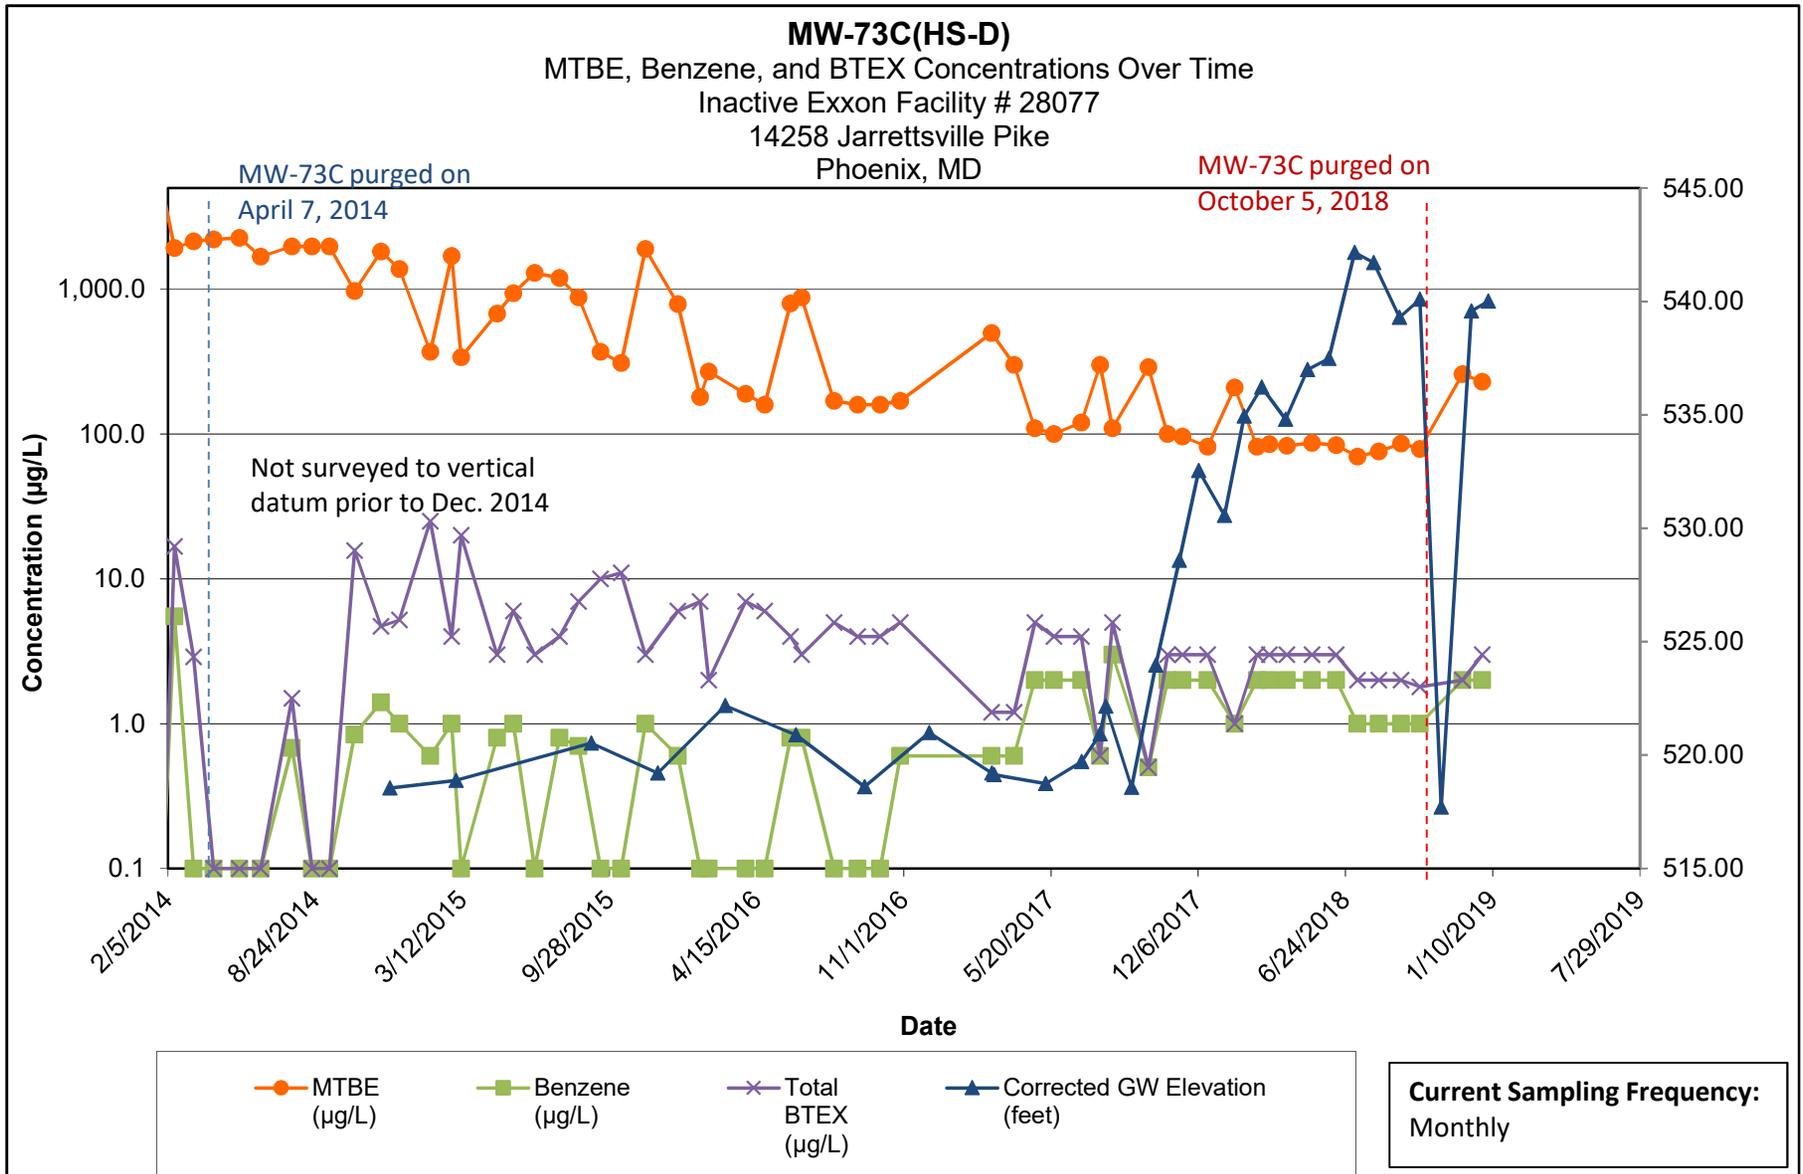

---

**MW-73C**

**Note:**

- 1.) ND results are charted as "0.1" to avoid confusion with estimated "J" values.
- 2.) AP - Sample collected above packer (packer set at 250 feet below ground surface)
- 3.) HS-S = Shallow composite HydraSleeve sampler set at half of open borehole.

**Note:**

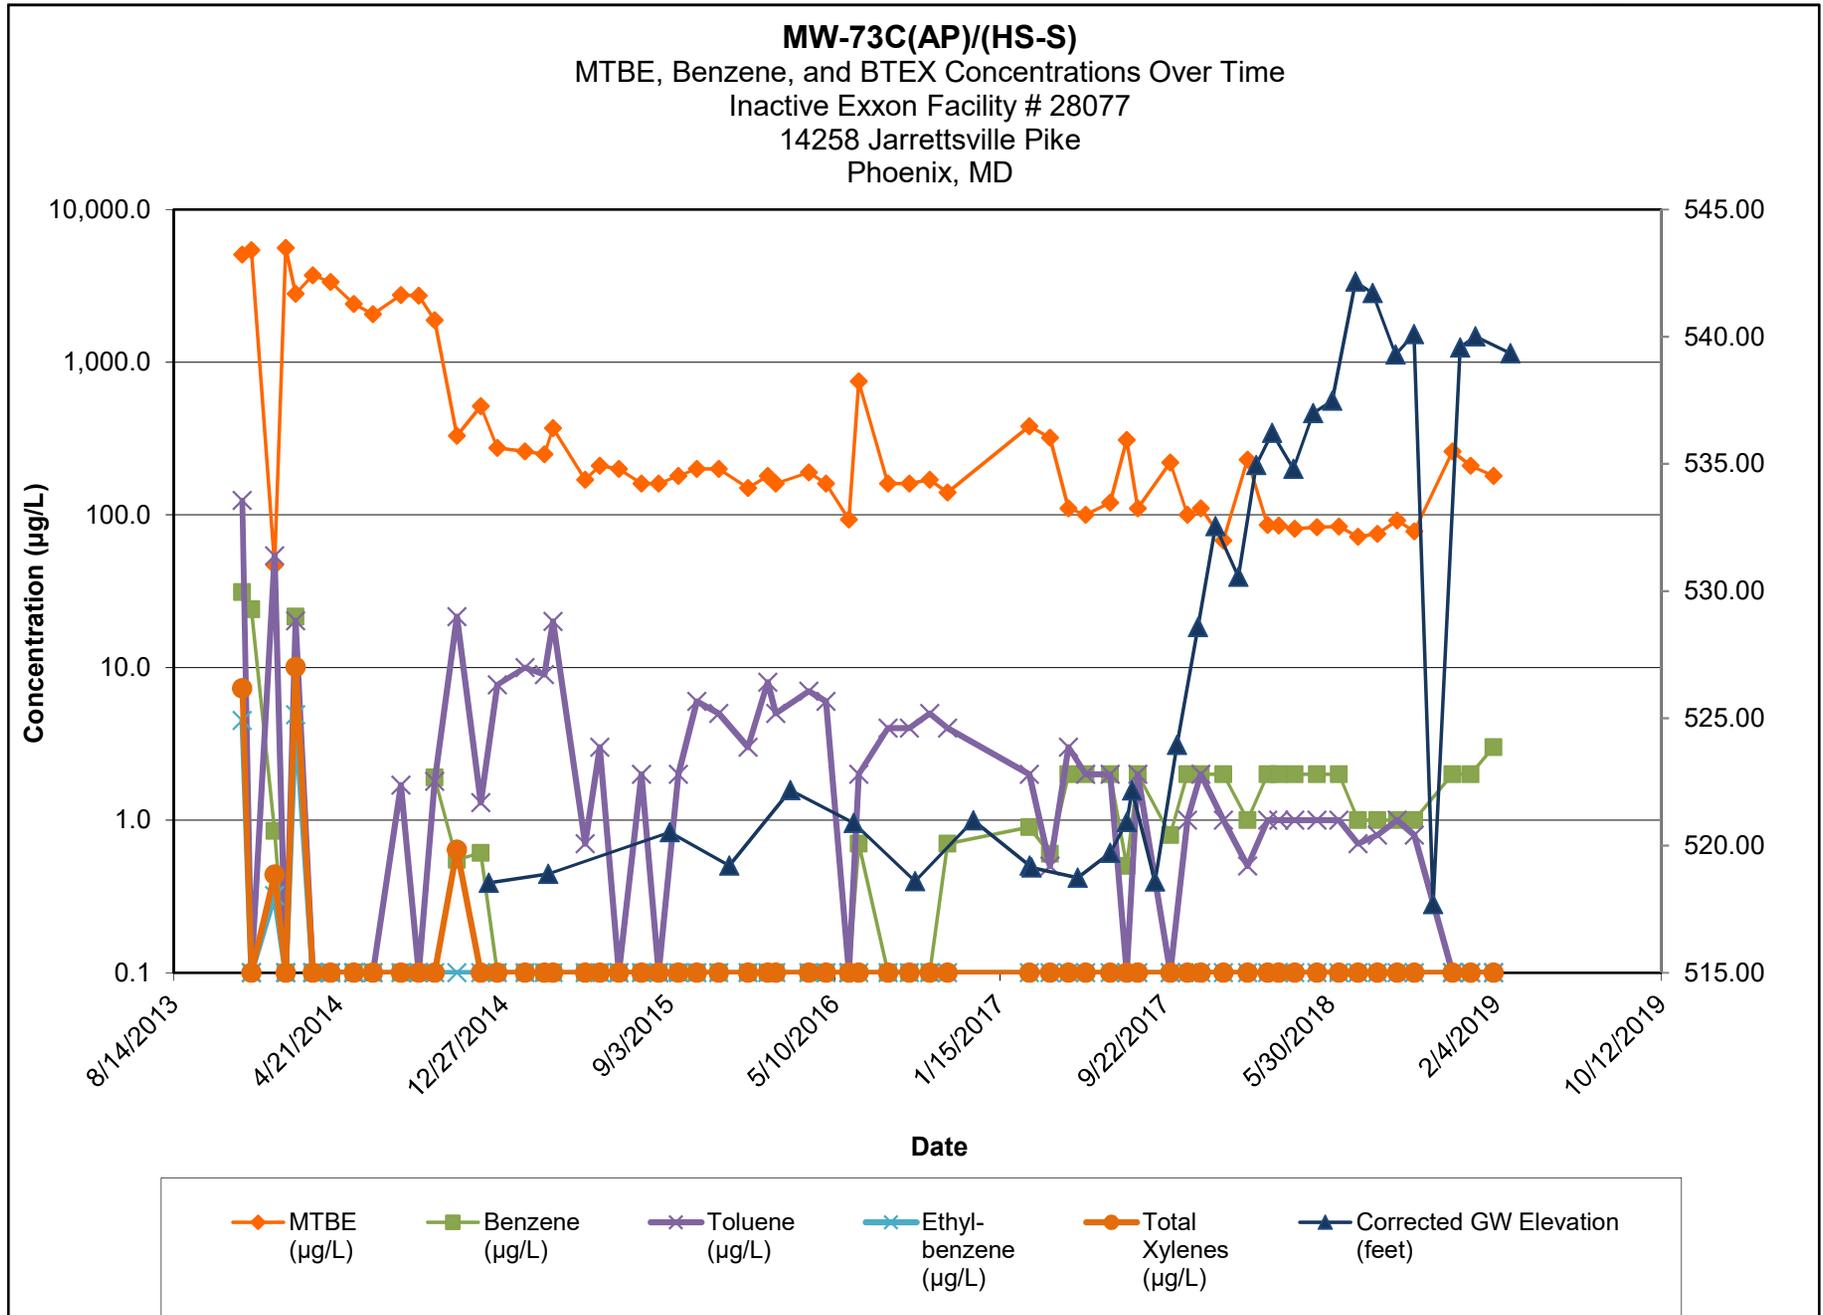

- 1.) ND results are charted as "0.1" to avoid confusion with estimated "J" values.
- 2.) BP - Sample collected below packer (packer set at 250 feet below ground surface)
- 2.) HS-D = Deep composite HydraSleeve sampler set at bottom of open borehole.

## CHART 2

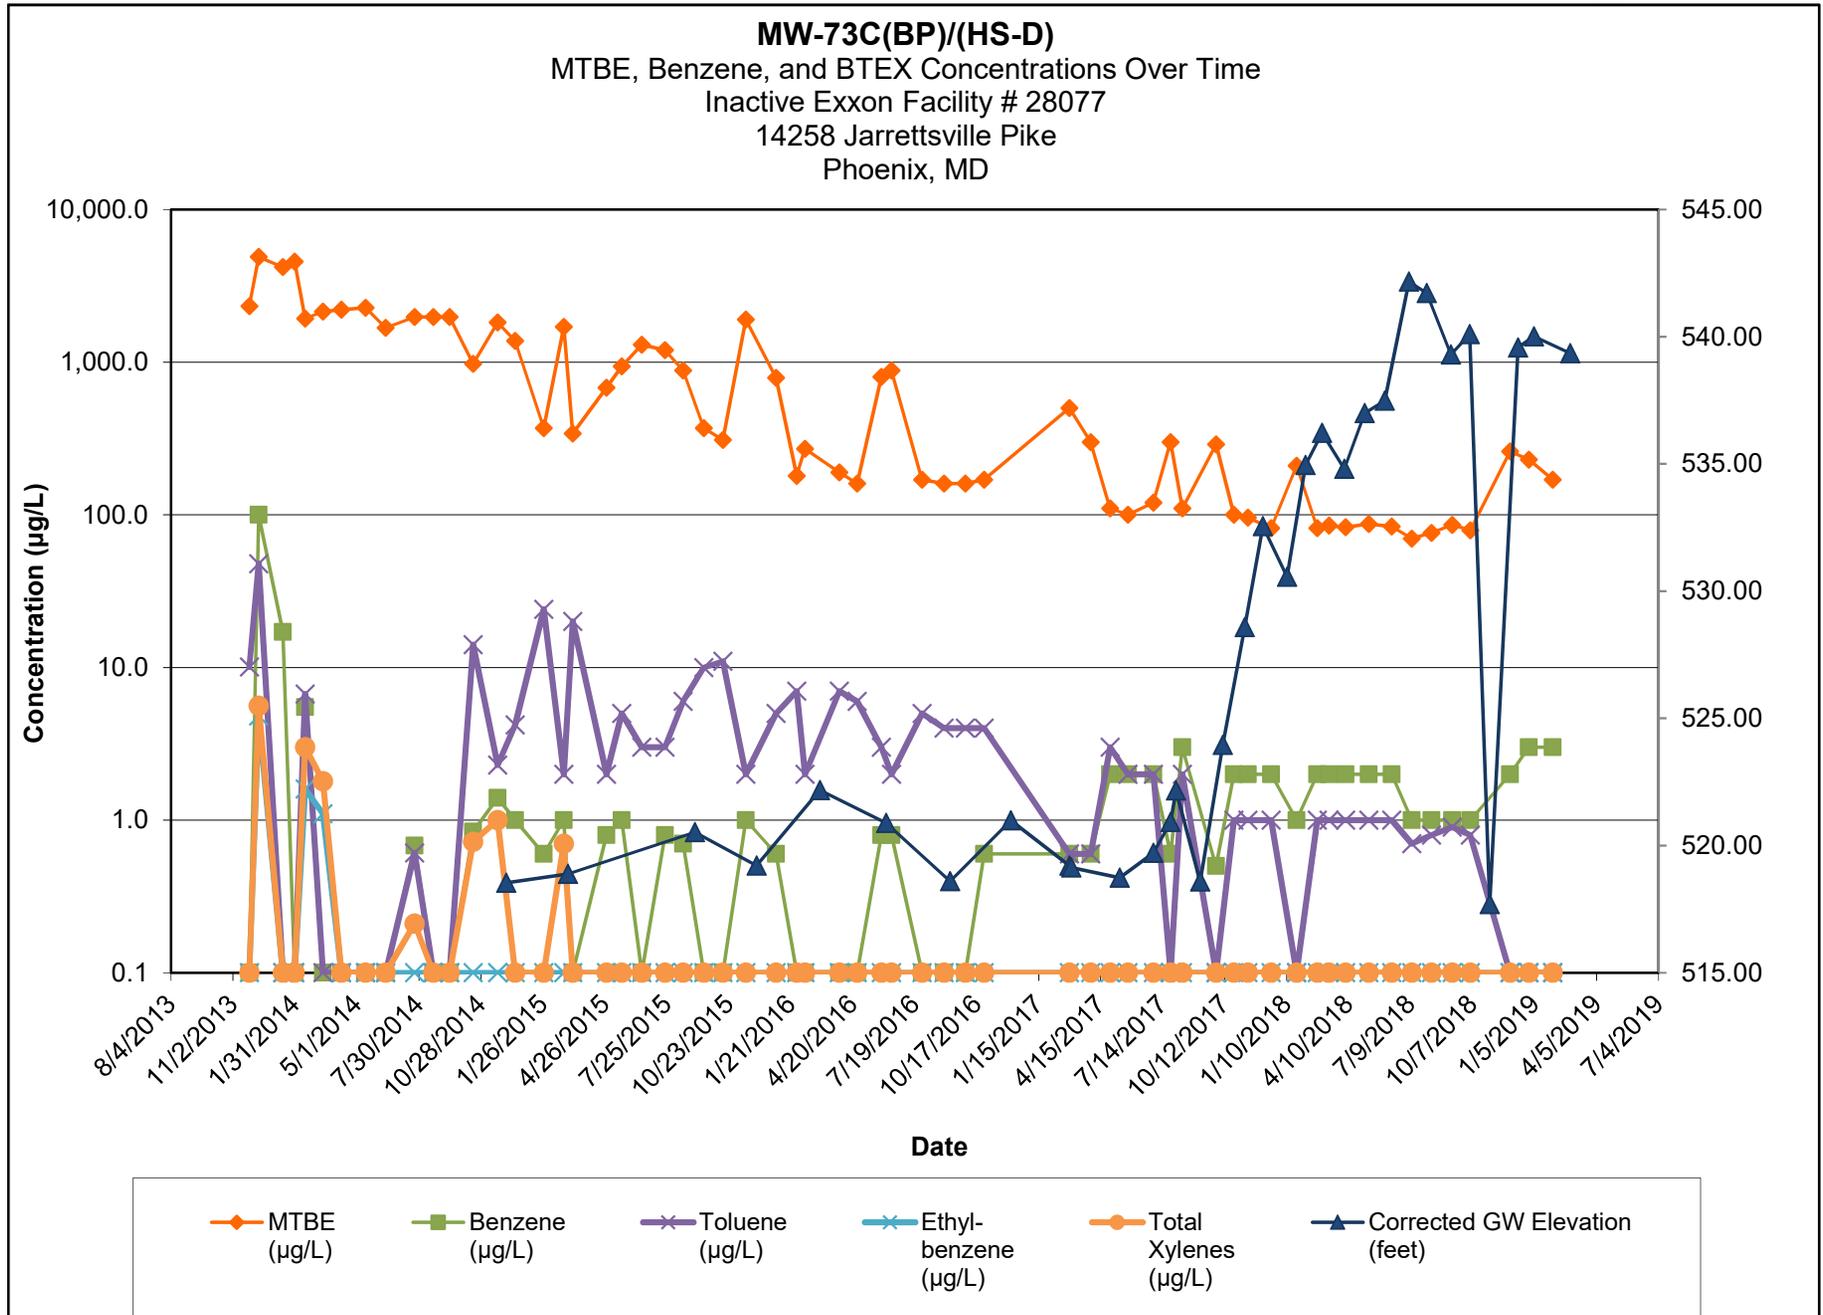

---

**Expanded MW-73C**

**Note:**

- 1.) ND results are charted as "0.1" to avoid confusion with estimated "J" values.
- 2.) [R] - indicates well was used for remediation at time of reporting.

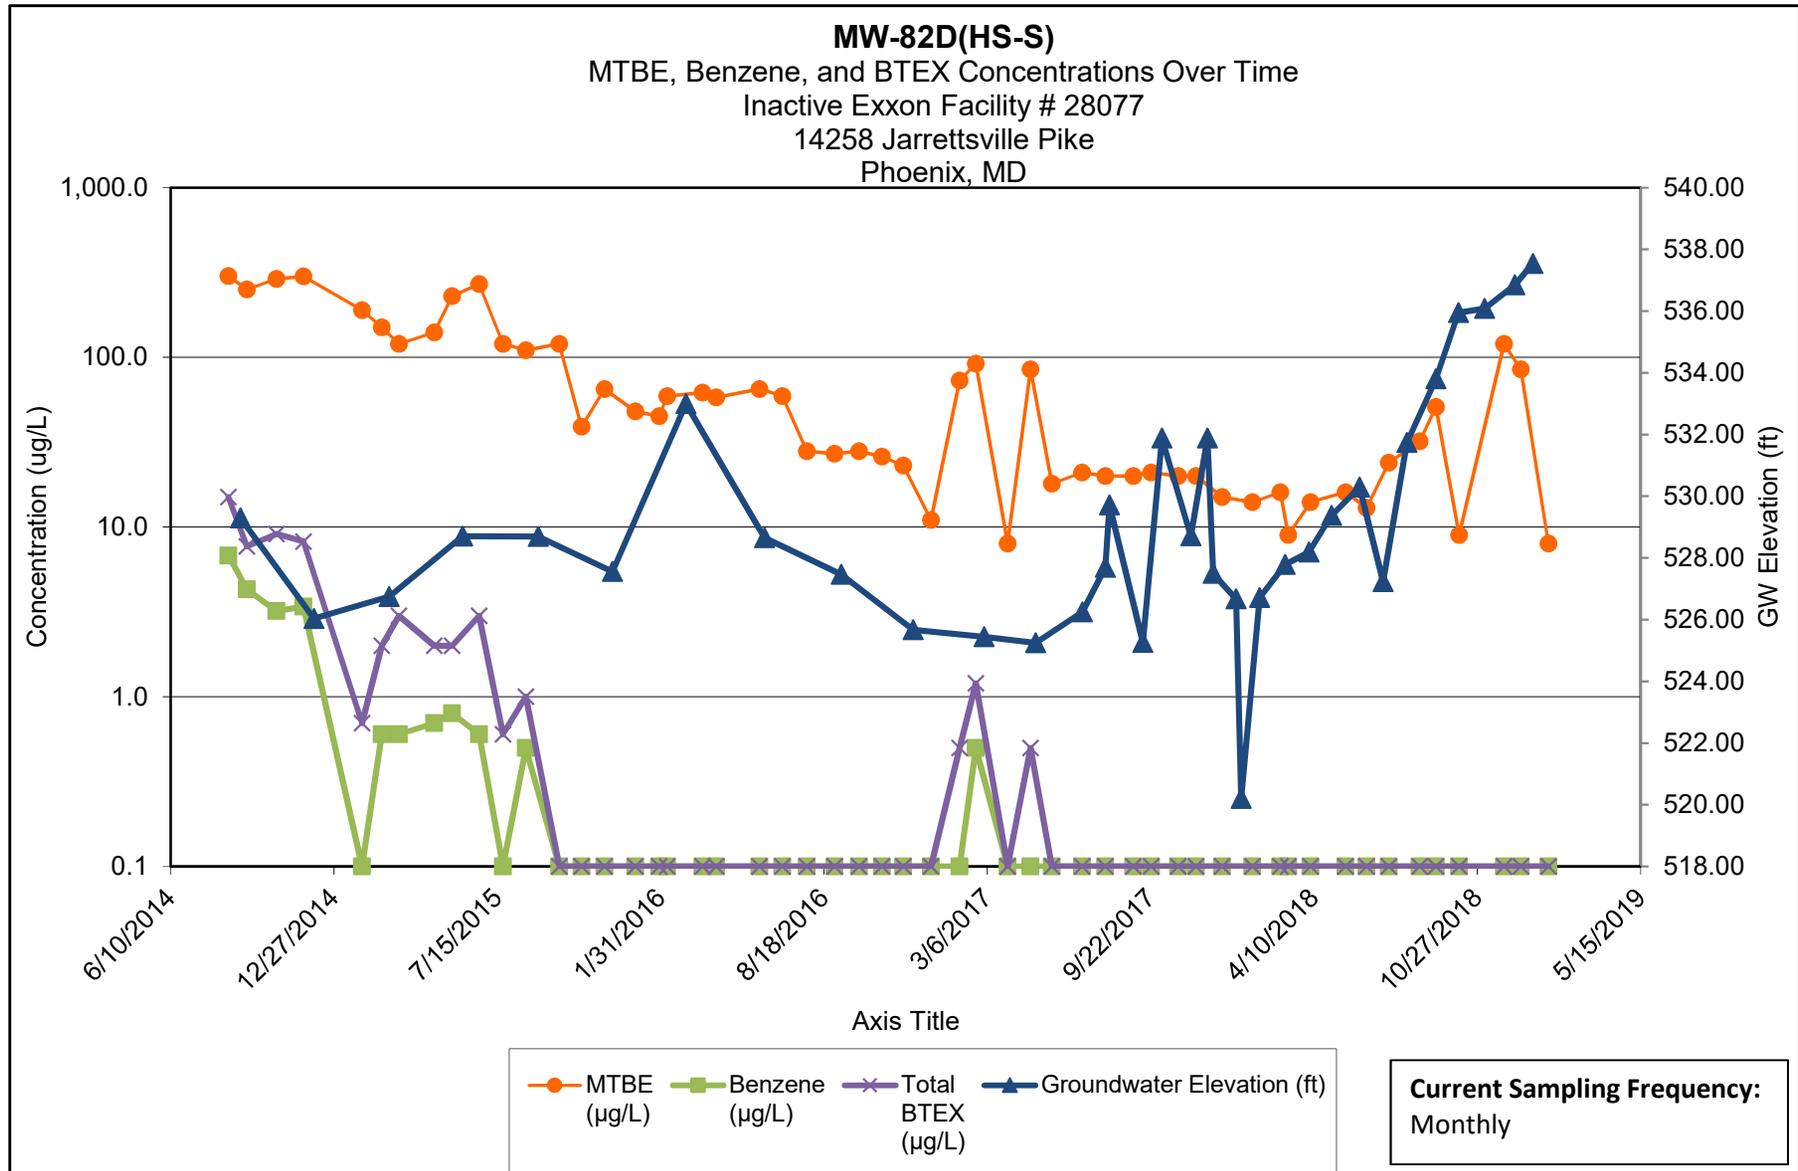

**Note:**

- 1.) ND results are charted as "0.1" to avoid confusion with estimated "J" values.
- 2.) [R] - indicates well was used for remediation at time of reporting.

## CHART 3

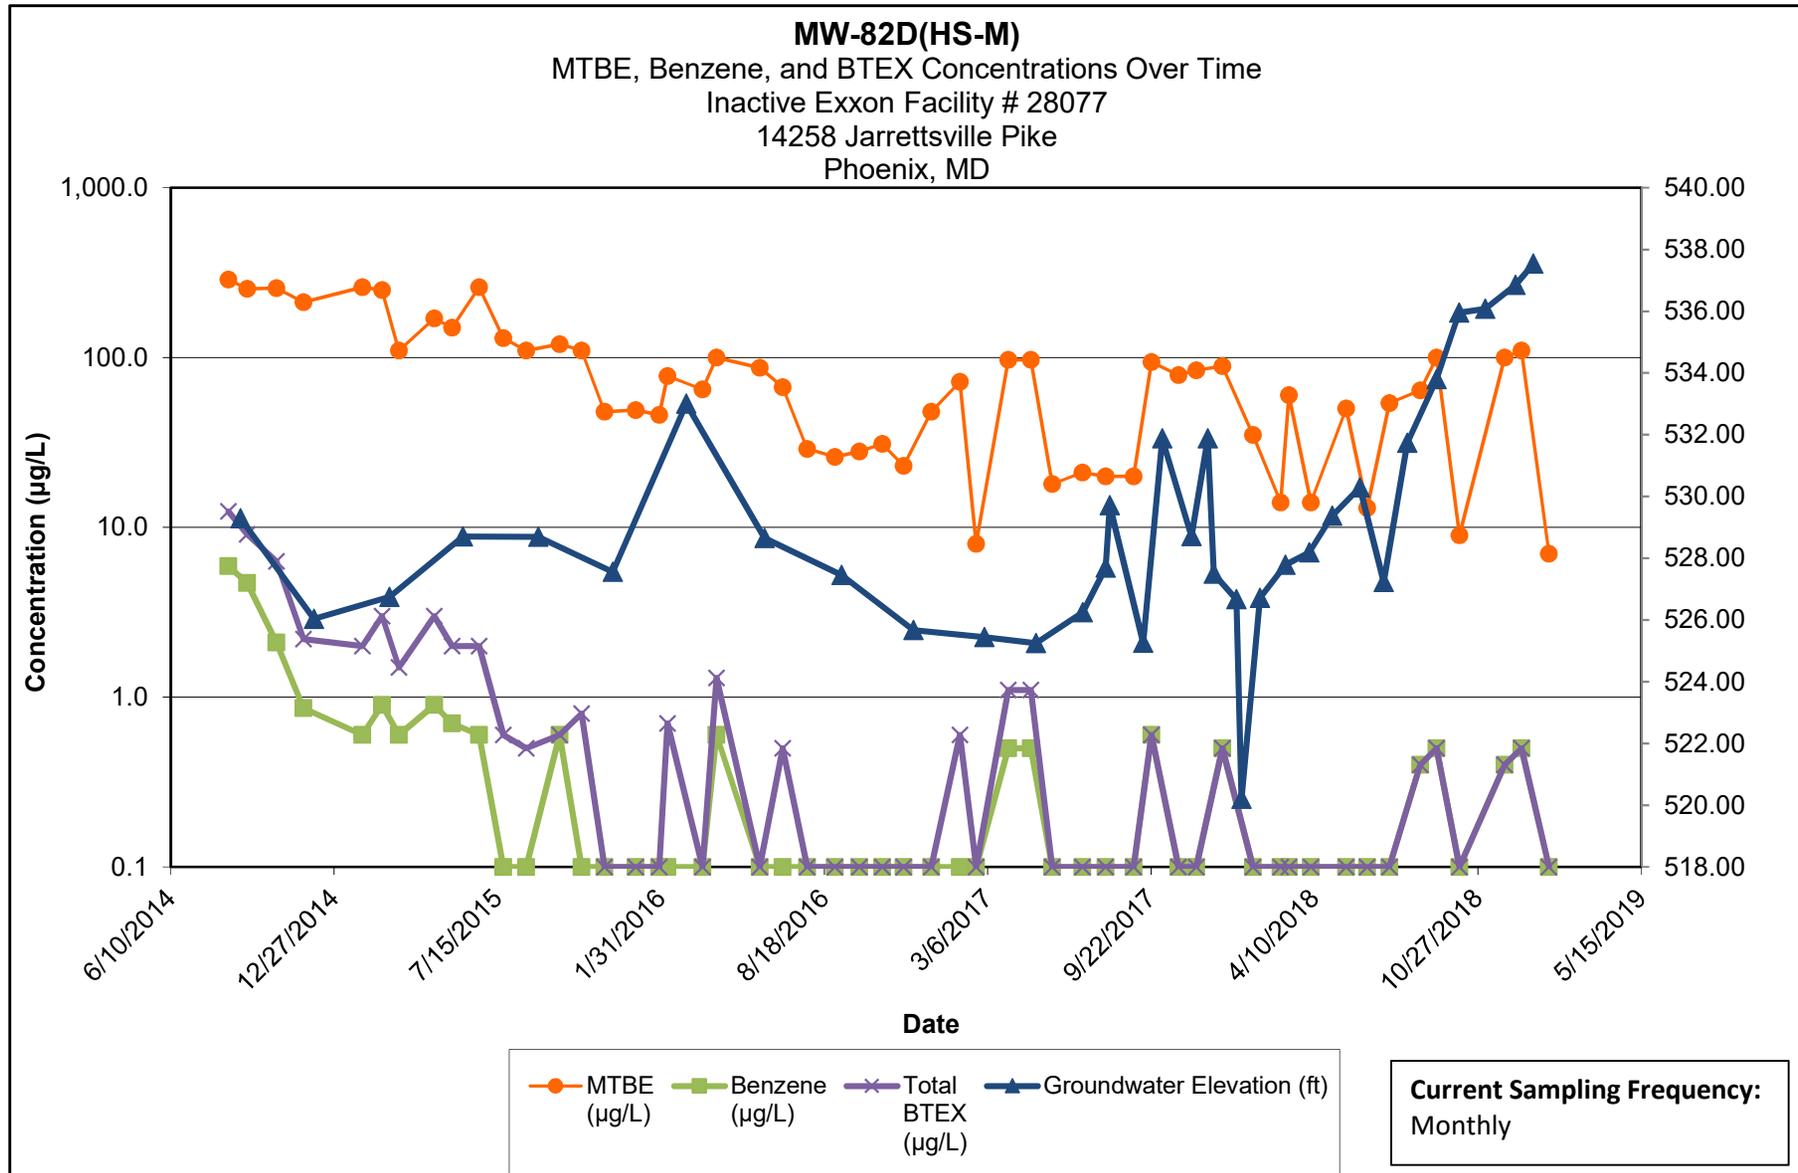

---

**MW-82D**

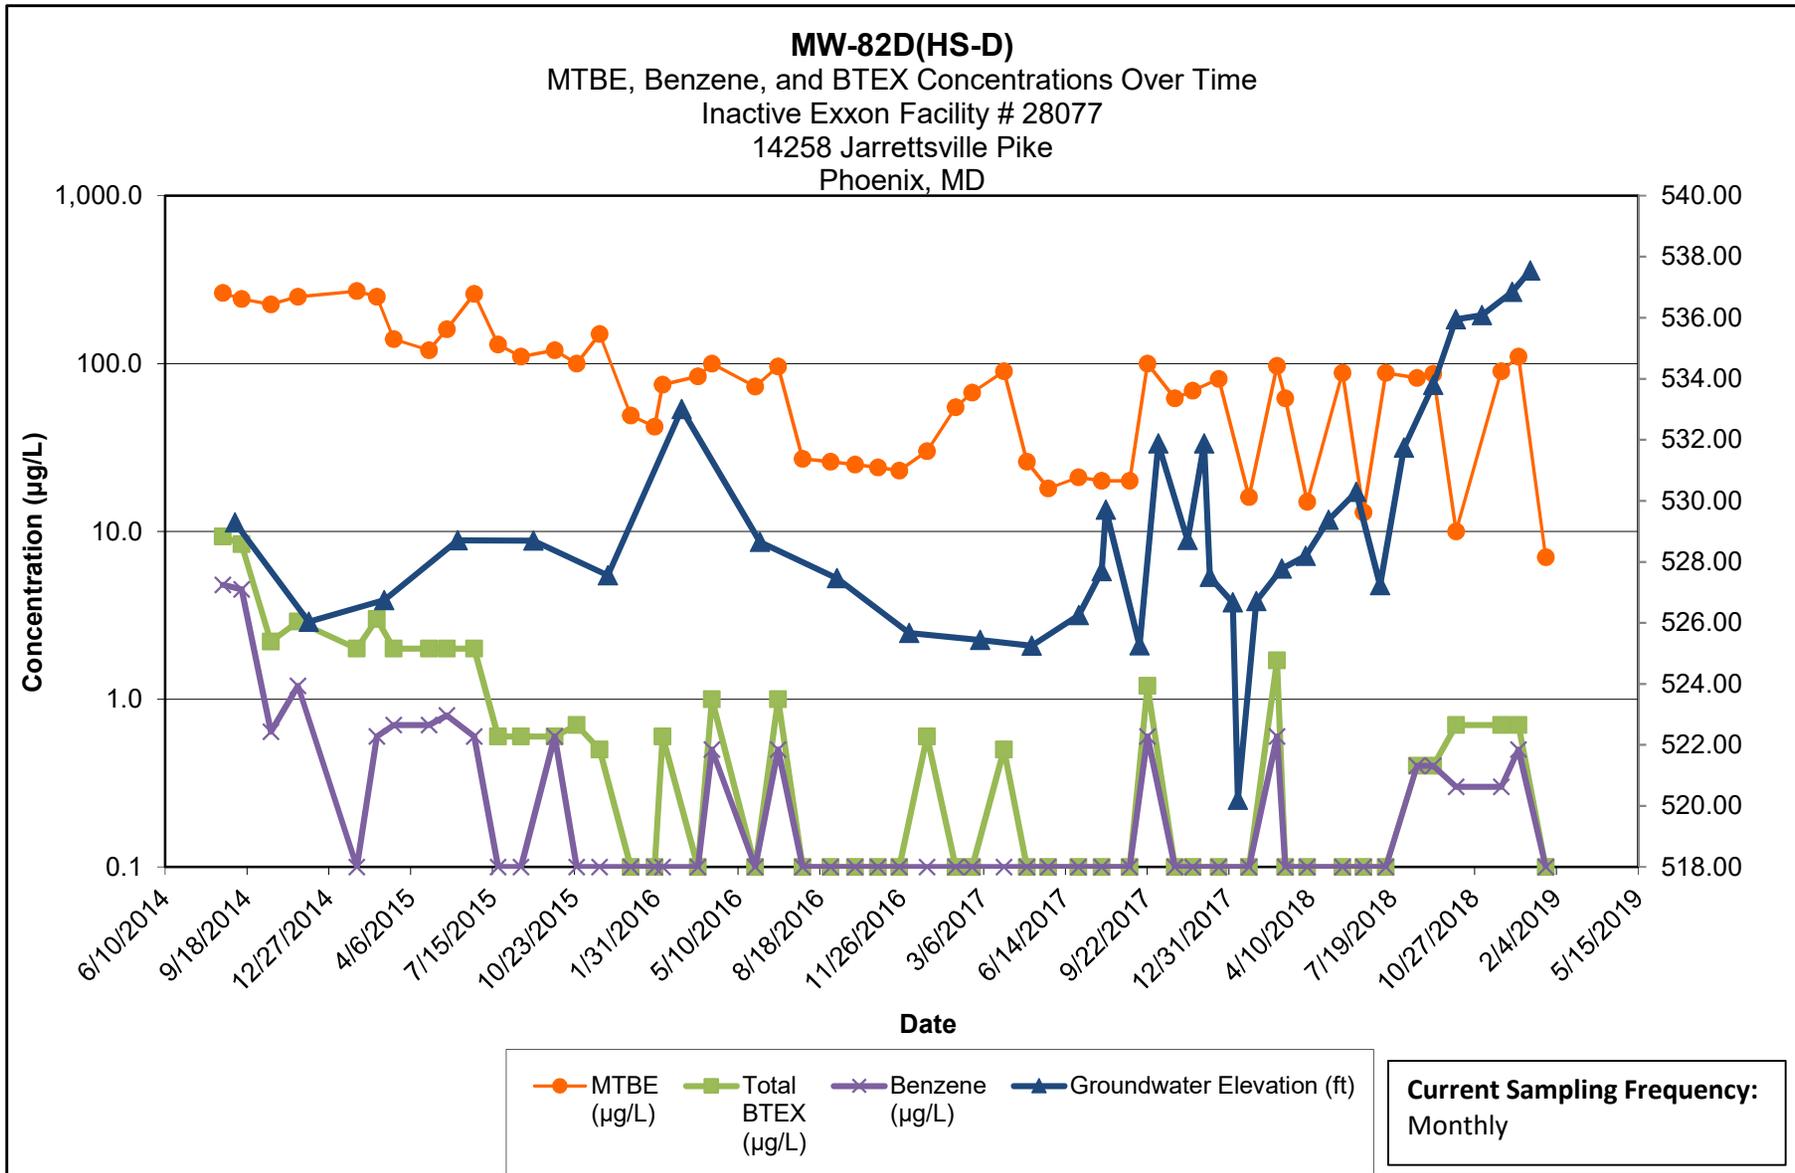

**Note:**

- 1.) ND results are charted as "0.1" to avoid confusion with estimated "J" values.
- 2.) HS-S = Shallow composite HydraSleeve sampler set at half of open borehole.

**Note:**

- 1.) ND results are charted as "0.1" to avoid confusion with estimated "J" values.
- 2.) HS-M = Middle composite HydraSleeve sampler set at middle of open borehole.

**Note:**

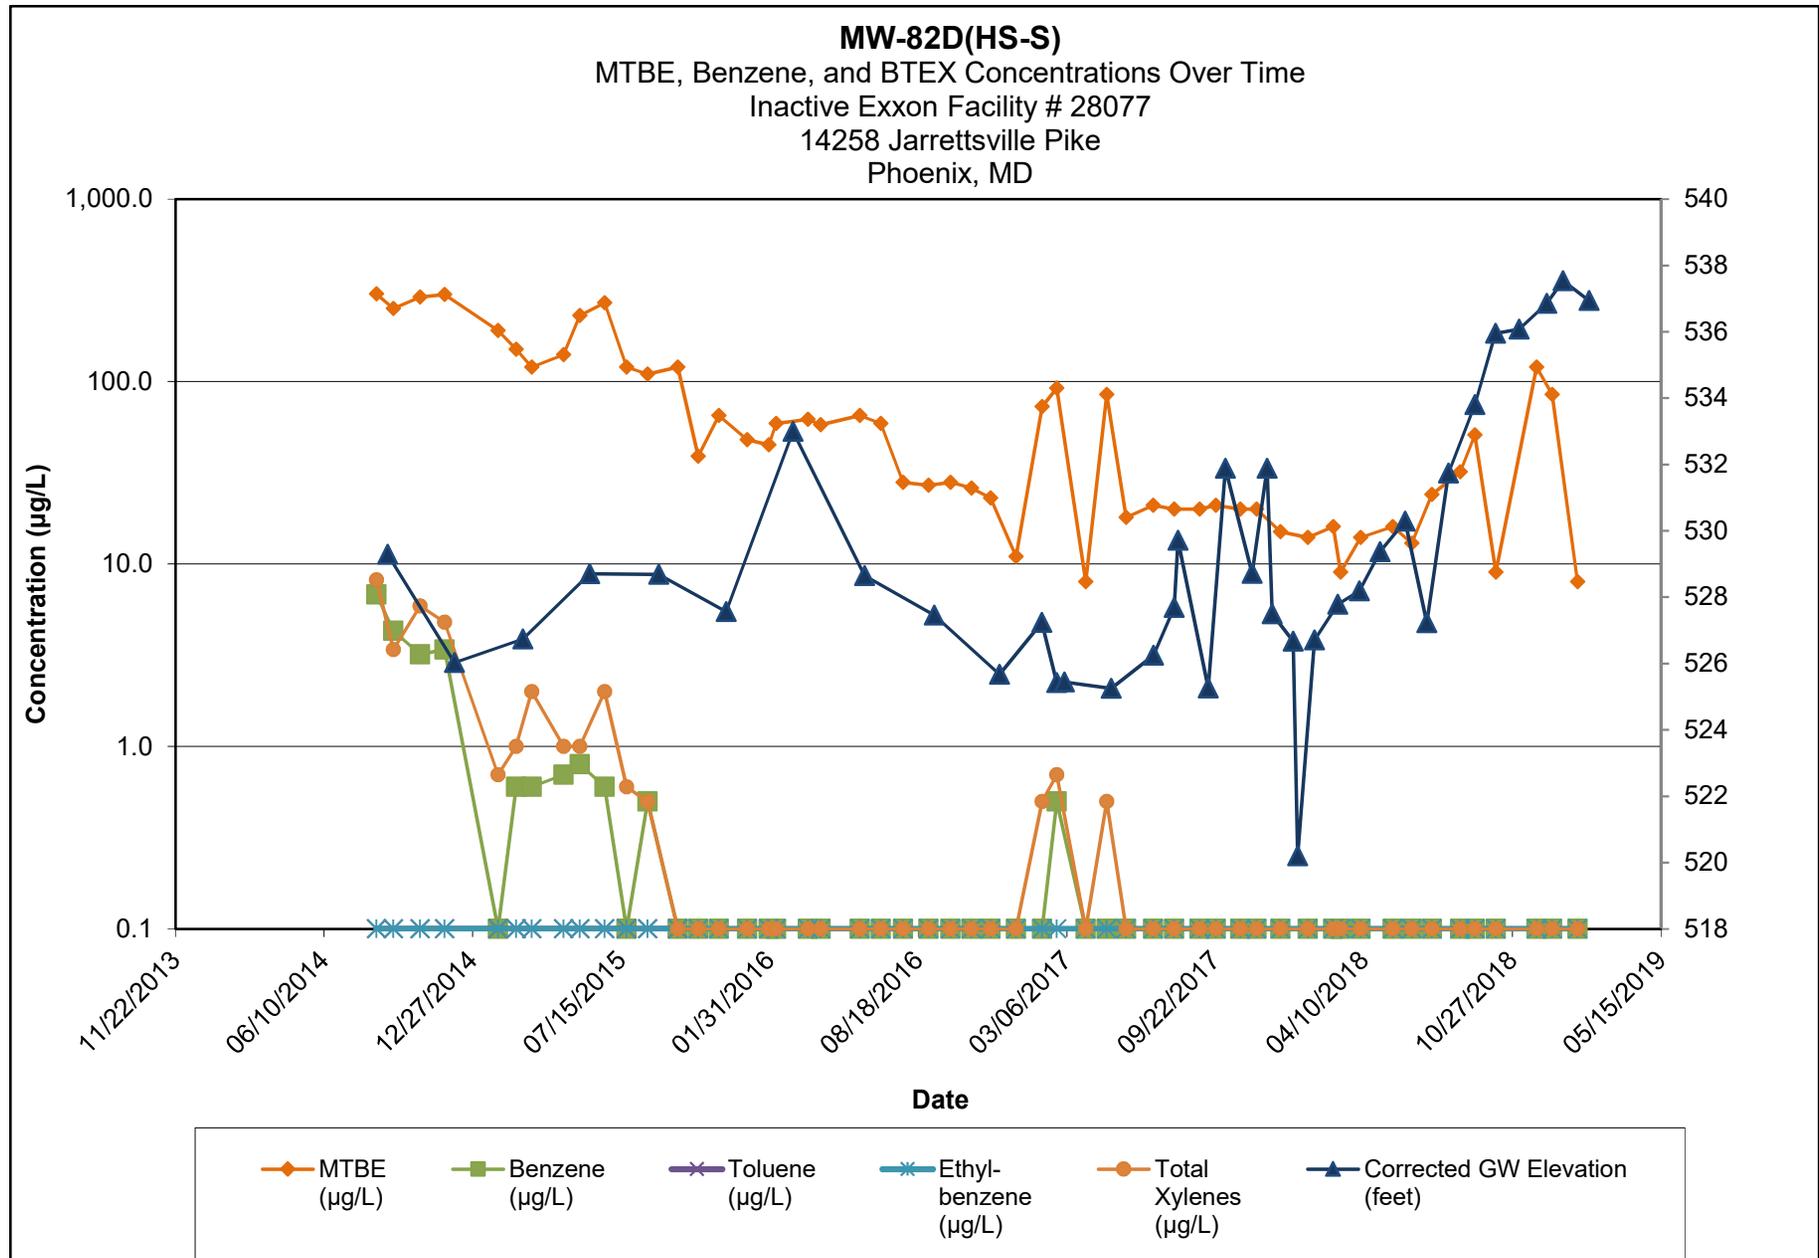

- 1.) ND results are charted as "0.1" to avoid confusion with estimated "J" values.
- 2.) HS-D = Deep composite HydraSleeve sampler set at bottom of open borehole.

## CHART 4

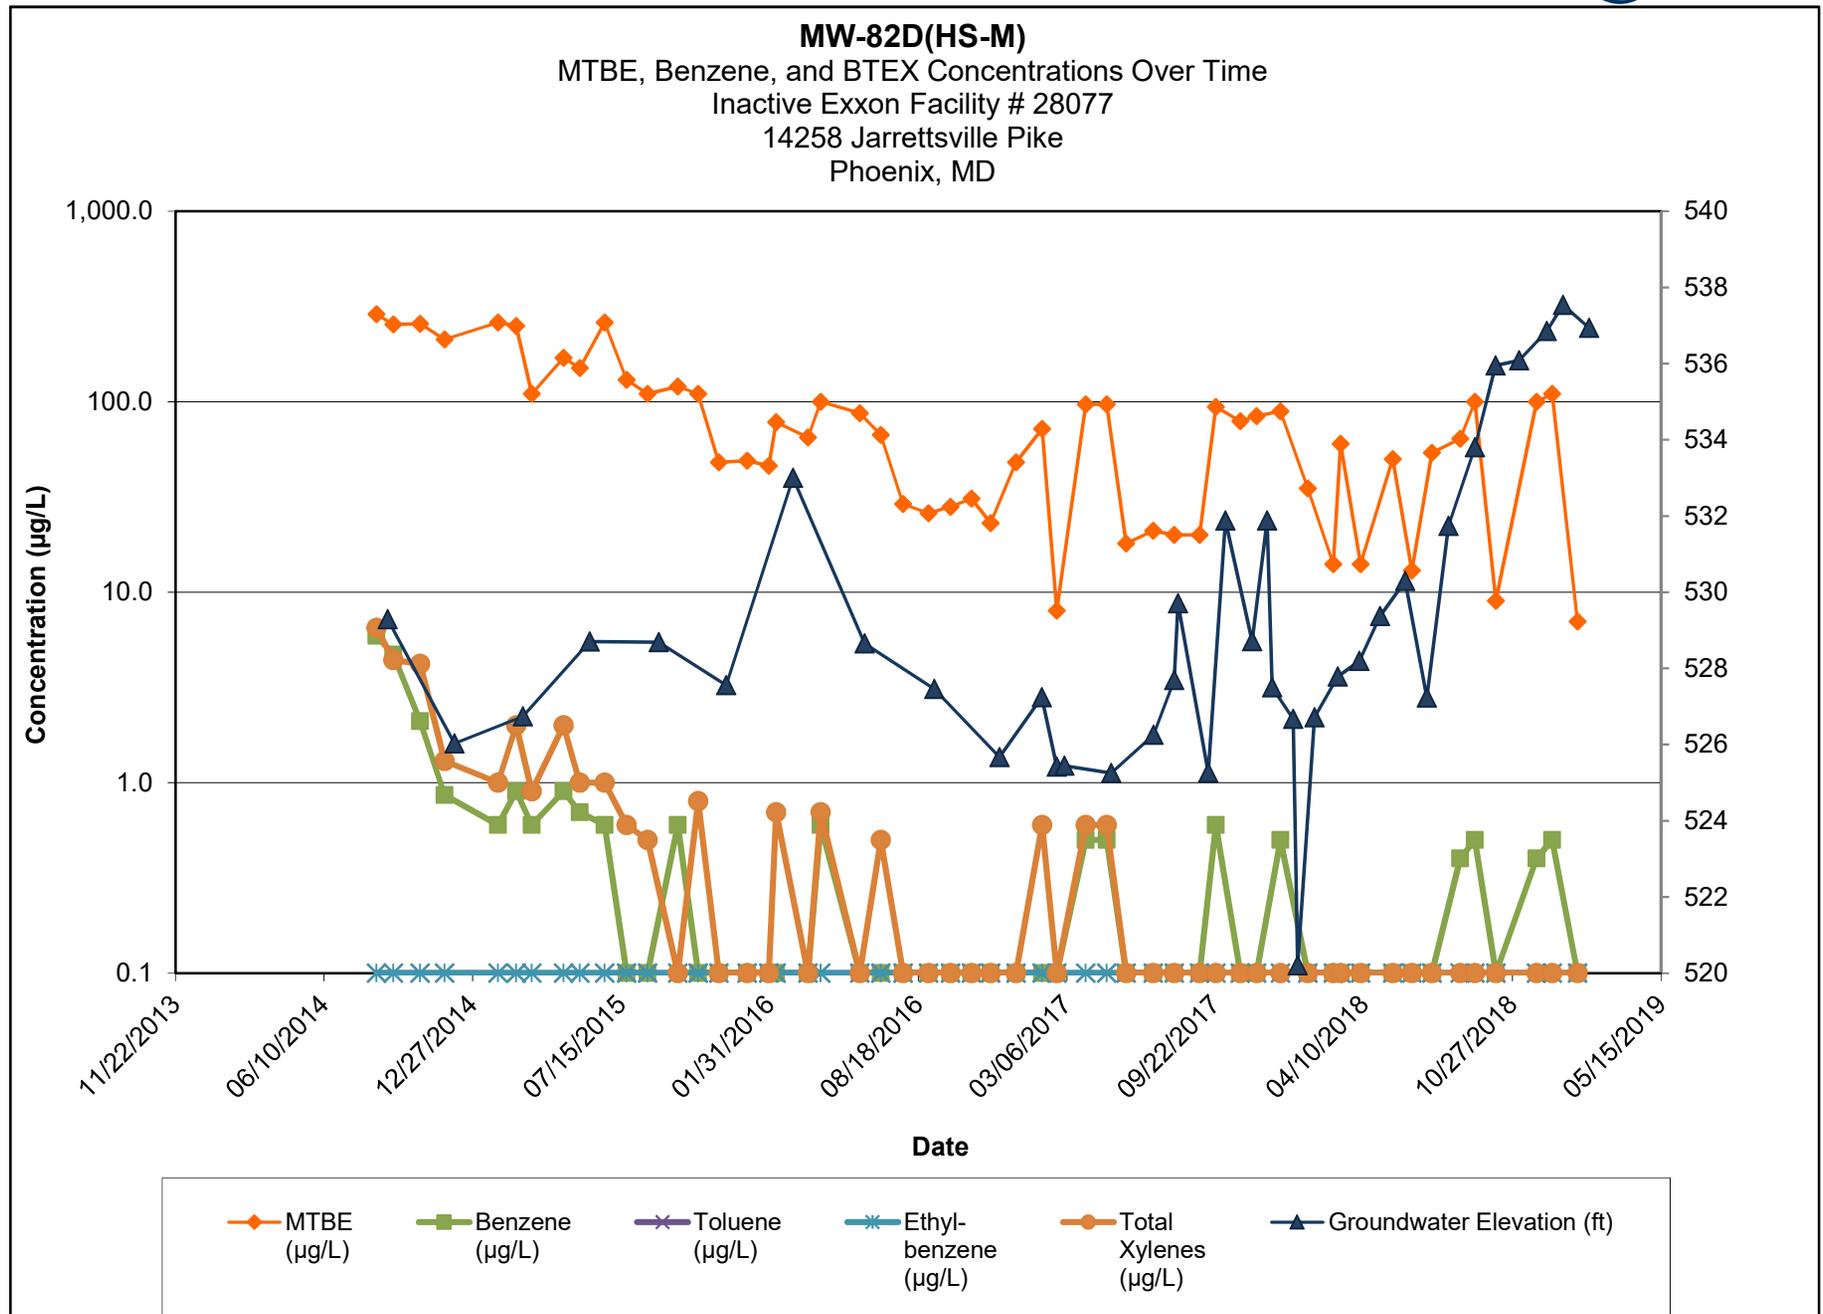

---

**Expanded MW-82D**

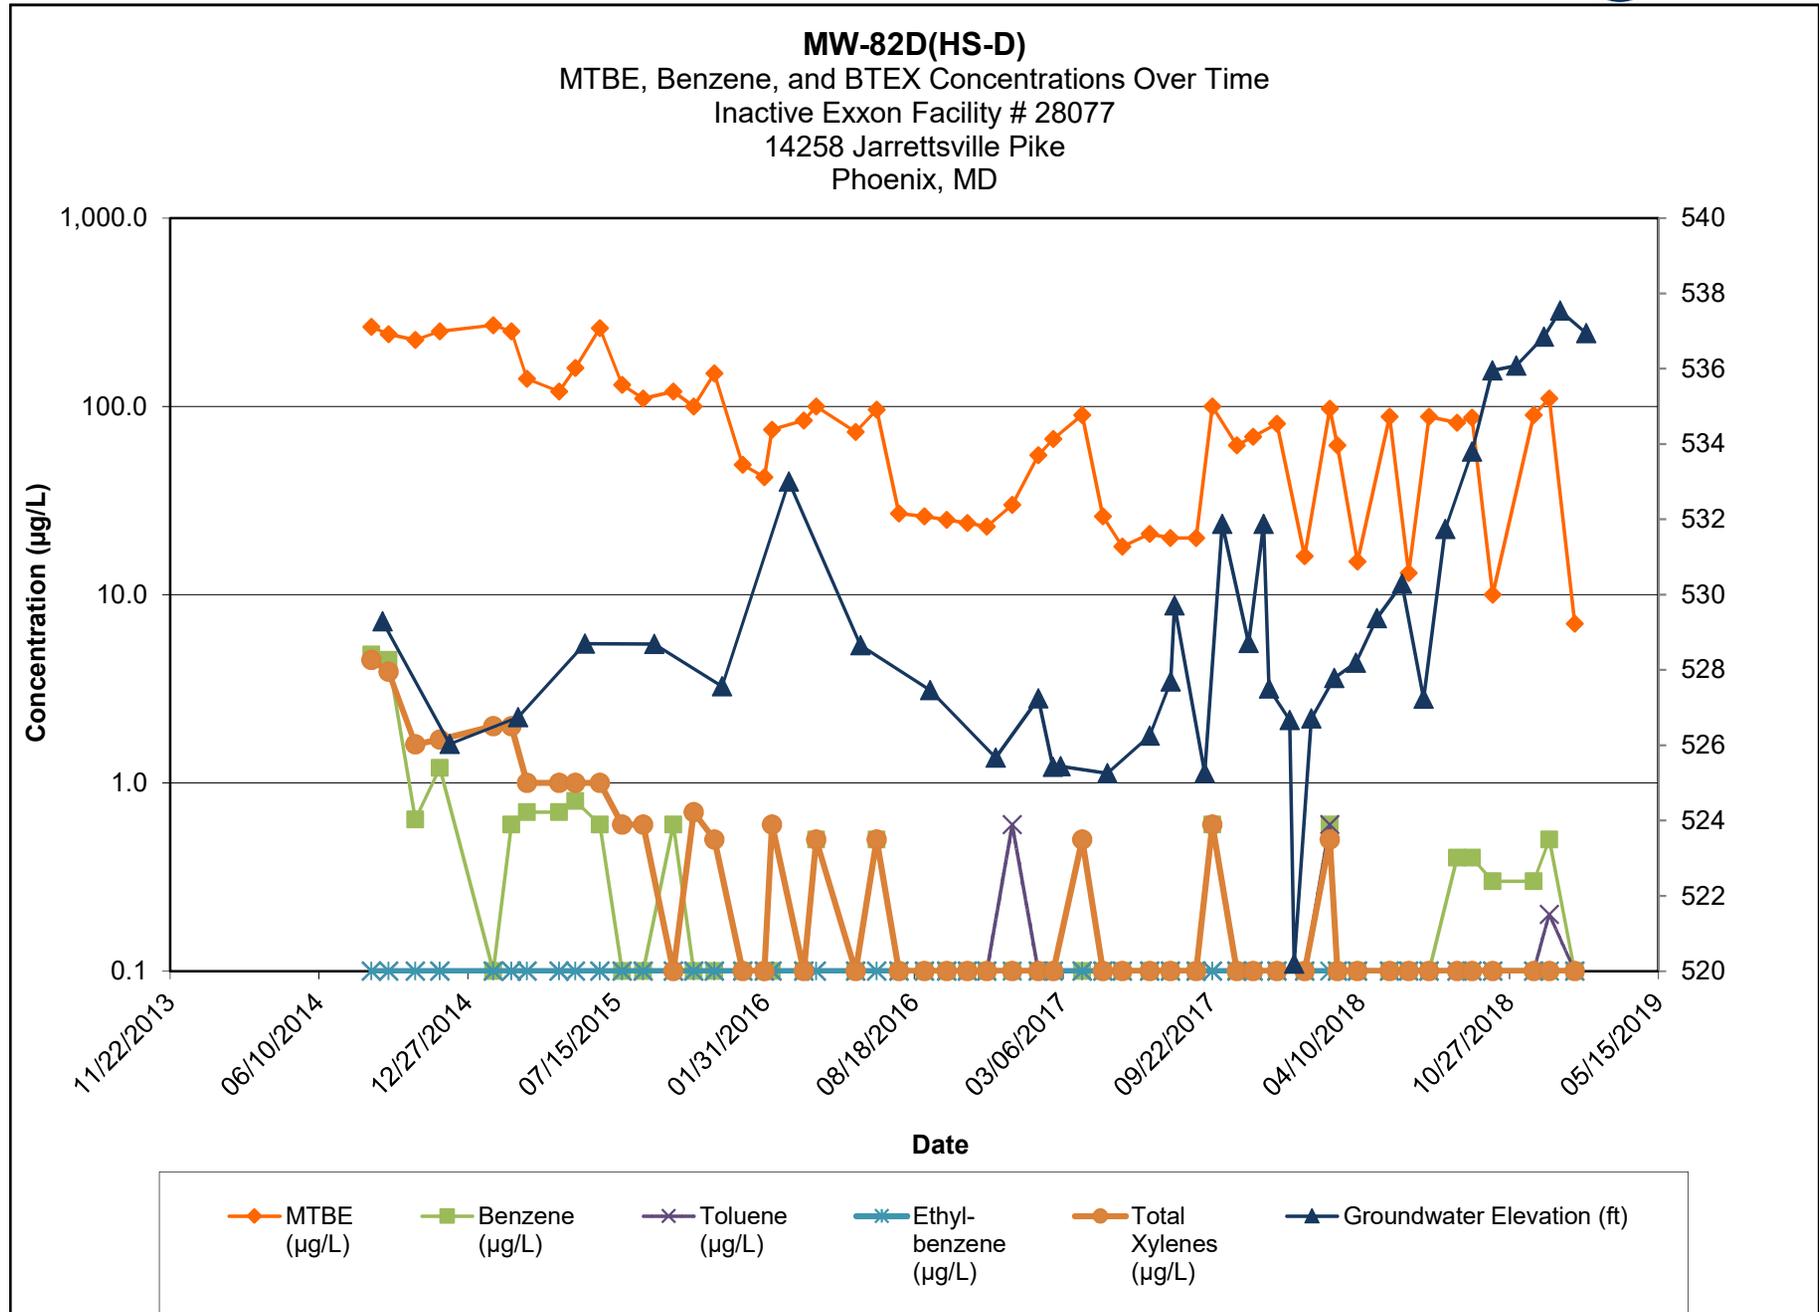

**Note:**

- 1.) ND results are charted as "0.1" to avoid confusion with estimated "J" values.
- 2.) [R] - indicates well was used for remediation at time of reporting.

**Note:**

- 1.) ND results are charted as "0.1" to avoid confusion with estimated "J" values.
- 2.) [R] - indicates well was used for remediation at time of reporting.

**Note:**

- 1.) ND results are charted as "0.1" to avoid confusion with estimated "J" values.
- 2.) [R] - indicates well was used for remediation at time of reporting.
