1.0 Introduction

This monitoring well (MW) sampling report has been prepared to satisfy the requirements set forth by the Maryland Department of the Environment (MDE) for the Pantry One Food Mart located at 1897 Conowingo Road, Rising Sun, MD; referred to herein as the "site".

2.0 Groundwater Monitoring

2.1 Monitoring Well Sampling & Gauging

On 6/25/20 AEC personnel arrived on site to gauge and sample all site monitoring wells and tank field monitoring pipes. Prior to sampling each well was gauged for presence/absence of LPH as well as depth to groundwater with an electronic oil/water interface meter. LPH was not detected in any of the site wells. After gauging, each well was purged a total of three well volumes of water. Purged groundwater was treated with activated carbon prior to being discharged to the ground. After purging, groundwater was allowed to recover to a minimum of 90% pre purge levels prior to sample collection. Groundwater samples were collected using pre-packaged, single use, disposable bailers and placed in laboratory supplied VOAs and then placed in a cooler with ice and chain of custody record for delivery to the laboratory. Groundwater samples collected were delivered to AEC's laboratory to be analyzed by EPA Method 8260 for volatile organic compounds (VOCs) and by EPA Method 8015 for total petroleum hydrocarbons - diesel and gasoline range organics (TPH-DRO/GRO).

2.2 Domestic Supply Well Sampling

On 6/25/20 a sample was collected from the site's domestic supply well (DSW). The sample was collected using standard sampling procedure by an MDE certified drinking water sampler (GB1584). Domestic supply wells samples collected were delivered to AEC's laboratory to be analyzed for VOCs by EPA Method 524.2.

2.3 Off Site Domestic Supply Well Sampling

On 6/25/20 samples were collected from the following off site DSWs:

- 1884 Conowingo Road
- 1894 Conowingo Road (POET System)
- 1898 Conowingo Road
- 1912 Conowingo Road
- 27 Dalmation Court
- 33 Dalmation Court

Samples were collected using standard sampling procedure by an MDE certified drinking water sampler (GB1584). Domestic supply wells samples collected were delivered to AEC's laboratory to be analyzed for VOCs by EPA Method 524.2.

3.0 Results of Groundwater Sampling

3.1 Groundwater Elevation

AEC constructed a groundwater elevation contour map based upon depth to groundwater measurements collected on 6/25/20 which depicts groundwater flow to be to the north-northeast . Relative groundwater elevation observed during the sampling event ranged from 263.18 feet in MW-3 (highest) to 254.81 feet in MW-2 (lowest). The groundwater elevation contour map can be found in Appendix A.

3.2 Groundwater Sampling Results

Method detectable concentrations of VOCs were observed in the groundwater samples collected from MW-2 and MW-3. Method detectable concentrations were not observed in the sample collected at location MW-1.

Samples collected from MW-2 contained concentrations which exceed the MDE GNCS to include:

- Benzene - 45.4 ug/L
- Naphthalene - 31.2 ug/L
- TPH-GRO - 2210 ug/L

Samples collected from MW-3 contained concentrations which exceeded the MDE GNCS to include:

- Benzene- 193 ug/L
- TPH-GRO - 520 ug/L

A Quick Reference Groundwater Sampling Summary Table which summarizes groundwater sampling analytical results can be found in Appendix B. A full Report of Analysis and Chain of Custody Record can be found in Appendix C.

3.3 Domestic Supply Well Sampling Results

Method detectable concentrations were not observed in the drinking water sample collected from the onsite supply well. A Quick Reference Groundwater Sampling Summary Table which summarizes groundwater sampling analytical results can be found in Appendix B. A full Report of Analysis and Chain of Custody Record can be found in Appendix C.

3.4 Off Site Domestic Supply Well Sampling Results

Method detectable concentrations were observed pre and post treatment in the drinking water sample collected from the POET system located at 1894 Conowingo Road. The post treatment sample detected TBA at 35.6 ug/L.

All off site supply well sampling results were submitted to the homeowners via mail on 7/24/2020.

A Quick Reference Groundwater Sampling Summary Table which summarizes off site DSW sampling analytical results can be found in Appendix B. A full Report of Analysis and Chain of Custody Record can be found in Appendix C.

4.0 Request For Sampling Frequency Reduction

On behalf of Mr. Ajiaz Shaikh, AEC, Inc. is requesting that the Maryland Department of the Environment grant a reduction of sampling frequency for the subject site based on the following observances:

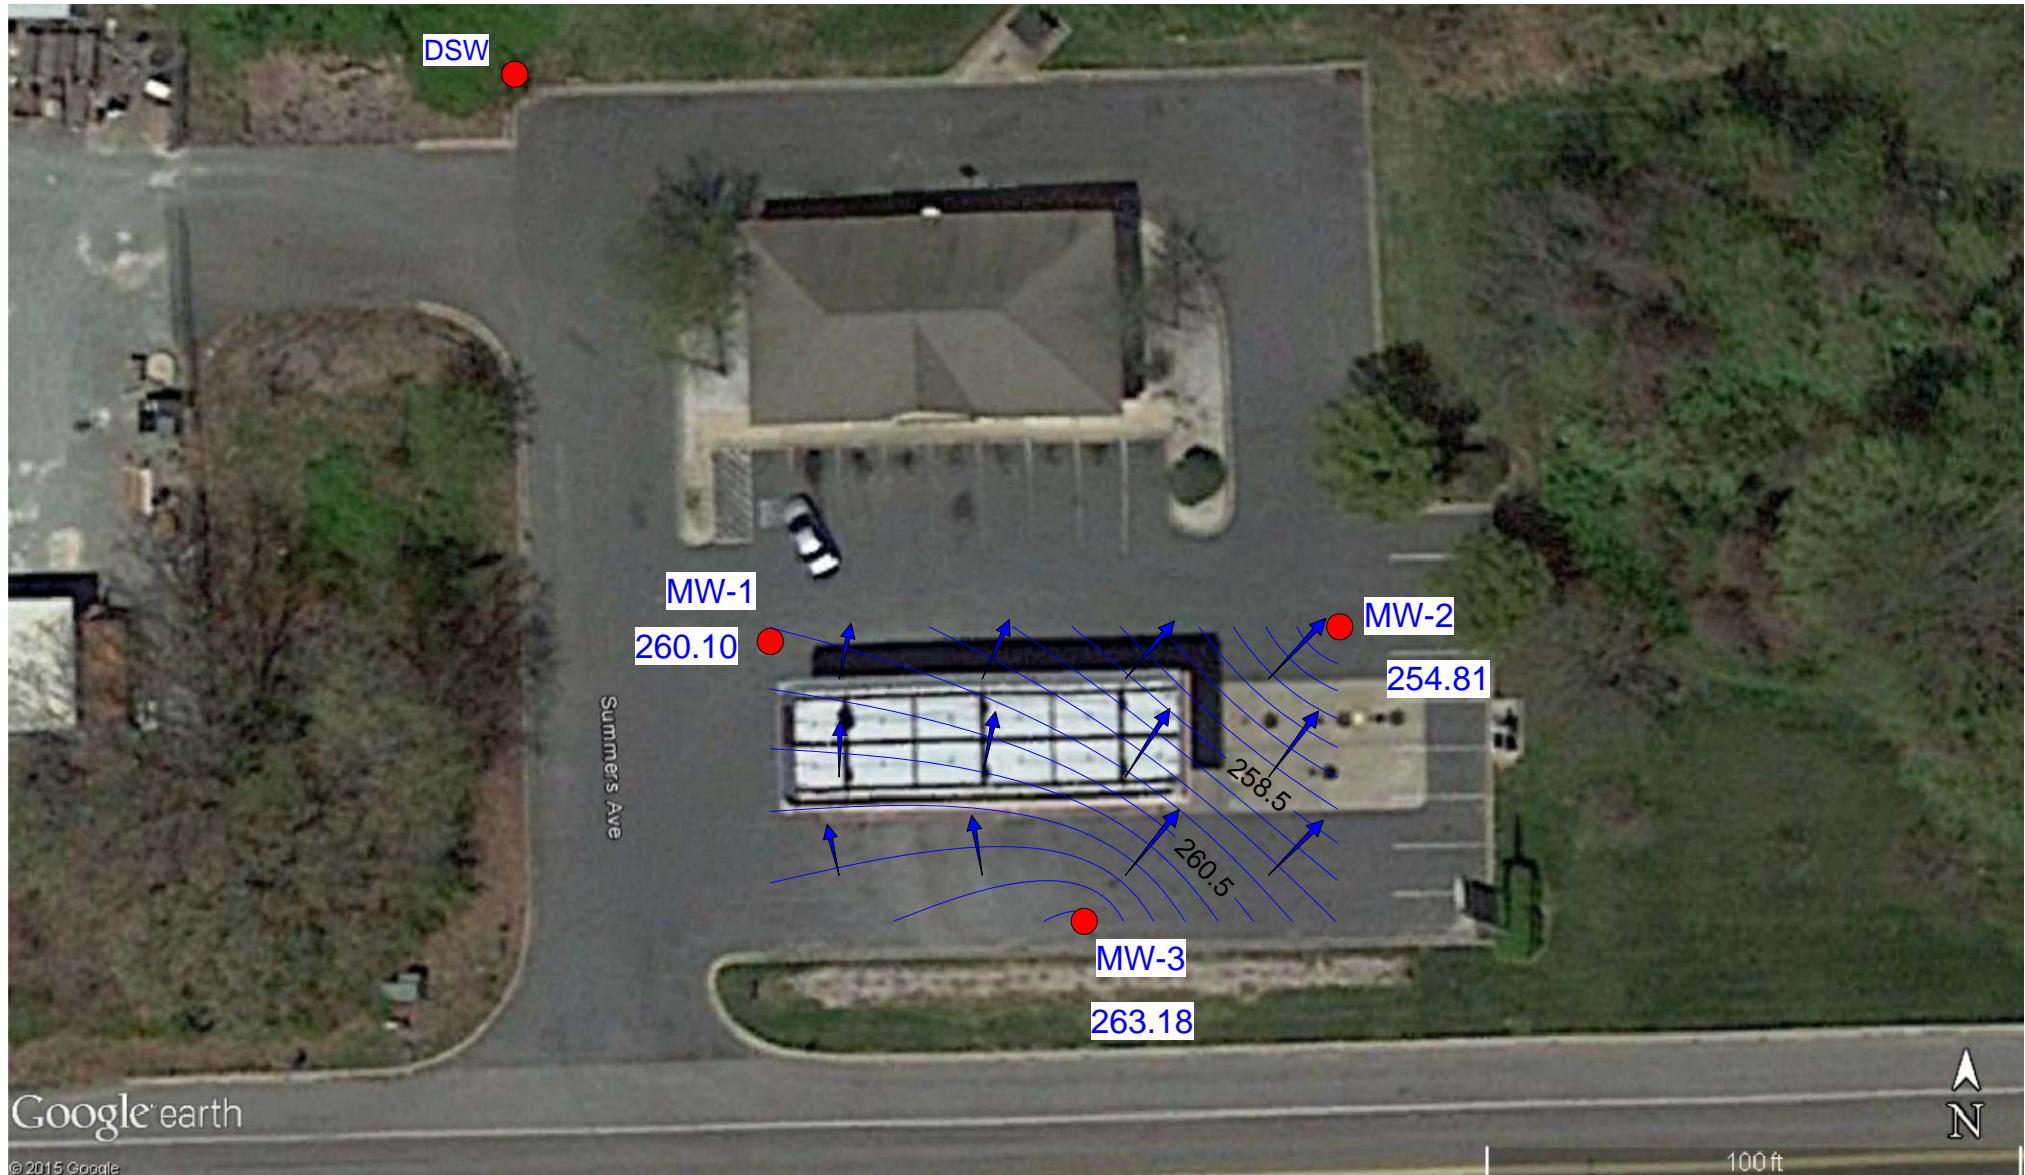

- Concentrations of volatile organic compounds have not been detected by EPA Method 524 in the site's DSW since sampling began in April of 2015
- Concentrations of volatile organic compounds have not been detected by EPA Method 524 in the offsite DSWs since sampling began in June of 2019 with the exception of the POET system located at 1894 Conowingo Road
 - The POET system located at 1894 Conowingo Road was installed by the homeowner prior to the 6/5/19 groundwater sampling event which prompted an increased sampling frequency requirement by MDE
 - Independent POET sampling results prior to 6/5/19 were not reported to MDE or the Cecil County Health Department
- Declining concentrations of BTEX, MTBE, and TPH-GRO in MW-2 have been observed since enhanced monitoring began in June of 2019
- Stable concentrations of BTEX, MTBE, and TPH-GRO in MW-3 have been observed since enhanced monitoring began in June of 2019
- LPH has not been detected in site MWs since sampling began by AEC in April of 2015.

It is AEC's opinion that an annual sampling frequency would be adequate to appropriately monitor site groundwater per MDE HRGUA regulations and that off site DSW/POET sampling should be terminated.
