RE: **ISCO SYSTEM OPERATION REPORT**  
Monrovia BP/Former Green Valley Citgo  
11791 Fingerboard Road  
Frederick County  
Monrovia, Maryland  
OCP Case #2005-0834-FR

Dear Mr. Richmond:

Groundwater & Environmental Services, Inc. (GES), on behalf of Carroll Independent Fuels Company (Carroll), respectfully submits this *In-situ Chemical Oxidation (ISCO) System Operation Report* for 11791 Fingerboard Road in Monrovia, Maryland (Site). This is the third report since GES' patented HypeAir-EX® ISCO system was restarted on February 20, 2012, and provides a review of system performance from May 21, 2012 to July 6, 2012. As detailed in the second *ISCO System Operation Report* dated June 13, 2012, GES plans to continue to operate the ISCO system while additional sampling and evaluation of remedial success is being conducted, continuing through the receipt and analysis of the third quarter sampling results. This quarterly sampling event was conducted from July 16 to 18, 2012. Previous groundwater sampling events, which are summarized herein, were conducted from April 3 to April 5, 2012 and from June 13 to June 15, 2012.

Following receipt of the quarterly sampling event results, a comprehensive analysis of the site conditions and remediation efforts to date is to be conducted. A comprehensive ISCO report and update to the May 2007 *Site Conceptual Model (SCM)* is due August 23, 2012, based on the extension request submitted in the previous *ISCO System Operation Report* and a phone conversation with Jim Richmond on June 21, 2012.

**The following attachments are included in this Report for reference:**

- Figure 2 – System Layout Map
- Figure 3 – Local Area Map
- Table 1 – ISCO System Operational Data Summary
- Table 2 – Groundwater Analytical Data Summary
- Table 3 – Groundwater and Headspace Monitoring Data Summary
- Table 4 – POET System & Potable Analytical Data Summary
- Table 5 – Green Valley Plaza Supply Well and POET Analytical Data Summary
- Appendix A – Groundwater Monitoring Graphs

## System Operation

As outlined in the CAP and CAP Implementation Plan, an ISCO system was to be utilized to remediate the area of greatest groundwater impact at the Site. GES' patented HypeAir-EX® technology is being used, which is a chemical oxidation technology that operates continuously to aggressively remediate the subsurface using a combination of ozone and hydrogen peroxide injection. The PulseOx® P-500 trailer from APTwater, Inc. is capable of injecting 5 pounds per day (lbs/day) of ozone ( $O_3$ ) and 24 gallons per day (gal/day) of hydrogen peroxide ( $H_2O_2$ ). During normal operation, ozone is injected with air that contained elevated levels of oxygen. Ozone and air injection occurs cyclically in each of the injection wells in 20 minute intervals. For the injection of hydrogen peroxide, dedicated events are conducted where the system is switched to inject hydrogen peroxide into an individual well. A soil vapor extraction (SVE) system operates continuously on vapor extraction point VE-1, which is used to mitigate potential fugitive emissions resulting from the oxidation and sparge processes.

For the initial source area remediation, three stainless steel injection wells (IW-1S, IW-1D, and IW-2S) were connected to the ISCO system. A fourth injection well (IW-4), installed following the coring and hydraulic pressure testing (which took place between May 21 and May 30, 2012), was brought online on June 5, 2012 and continues to operate cyclically along with injection wells IW-1S, IW-1D, and IW-2S. Injection well IW-4 is constructed of  $\frac{3}{4}$ -inch stainless steel and is screened from 85 to 89 feet below ground surface (bgs) with sand pack from 83 to 92 feet bgs.

Since May 21, 2012, the system has operated 44 out of 46 days (96% uptime). Hydrogen peroxide injection events were conducted on June 1, 2012, from June 13 to 14, 2012 and June 28 to 29, 2012. The downtime was associated with a leaking fitting that required a repair.

## Data Collection

Operation and maintenance (O&M) visits continue to occur on a weekly basis. During routine O&M visits, the following data are measured and/or recorded from the remediation system and are presented in **Table 1**, ISCO System Operational Data Summary:

- Hour meter readings for the system and each injection well;
- Ozone and air flow rates and pressures into each injection well;
- Ozone injection rate and cumulative mass of ozone injected;
- Volume of hydrogen peroxide injected;
- Applied blower vacuum and the extracted vapor flow rate from the SVE system; and
- VOC, oxygen, and ozone concentrations from the SVE air stream.

The following data (presented in **Table 3**, Groundwater and Headspace Monitoring Data Summary) are measured at monitoring wells MW-13, MW-15D, MW-18S, and MW-18D on a weekly basis and monitoring wells MW-7, MW-8, MW-10, MW-14S, MW-14D, MW-16, and MW-17 on an every-other week basis:

- Headspace pressure, percent oxygen, and concentrations of volatile organic compounds (VOCs) and ozone; and
- Groundwater elevation, temperature, dissolved oxygen (DO), oxidation-reduction potential (ORP), conductivity, and pH.

During the groundwater sampling event conducted from June 13 to 15, 2012, groundwater monitoring wells MW-7, MW-8, MW-10, MW-13, MW-14S, MW-14D, MW-15D, MW-16, MW-17, MW-18S, and MW-18D were sampled. In addition, the six private drinking water supply wells with point of entry treatment (POET) systems and public supply wells FR-94-1233 and FR-94-1282 were also sampled. The samples were analyzed for VOCs, total organic carbon (TOC), chemical oxygen demand (COD), total

dissolved solids (TDS), total suspended solids (TSS), dissolved and total iron, and total chromium. A similar event is to occur from June 13 to June 15, 2012. Refer to **Table 2** for the Groundwater Analytical Data Summary, **Table 4** for the POET System & Potable Analytical Data Summary, and **Table 5** for the Green Valley Plaza Supply Well and POET Analytical Data Summary.

### System Operational Data Summary:

Provided below is a summary of system data collected during the O&M visits over the recent operation period from May 21<sup>st</sup> to July 6<sup>th</sup> (cumulative data includes the 2011 and 2012 operation periods):

Injection Well	Air Injection Flow Rate Average (Range)	Injection Pressure Average (Range)	Mass of Ozone Injected (pounds)	Volume of Hydrogen Peroxide Injected (gallons)		
(ID #)	(standard cubic feet per minute)	(pounds per square inch)	May 21 <sup>st</sup> – July 6 <sup>th</sup>	Cumulative*	May 21 <sup>st</sup> – July 6 <sup>th</sup>	Cumulative*
IW-1S	1.9 (1.8 to 2.0)	25 (21 to 31)	31	145	0.0	16.4
IW-1D	1.9 (1.6 to 2.2)	27 (22 to 33)	29	139	0.0	16.4
IW-2S	2.1 (1.9 to 2.2)	23 (18 to 26)	33	145	24.0	27.3
IW-4	2.0 (1.8 to 2.1)	25 (21 to 28)	21	21	19.9	19.9
<b>Total</b>			<b>114</b>	<b>450</b>	<b>43.9</b>	<b>107.9</b>

\* Cumulative data include mass injected during the first operation period from September to November 2011.

The following data were collected from the SVE system:

- The vapor flow rate ranged from 128 to 180 standard cubic feet per minute (scfm);
- Photoionization detector (PID) readings were 0.0 ppm throughout the period; and
- The estimated hydrocarbon recovery was 0.0 pounds (cumulative recovery is 6.9 pounds).

### Monitoring Observations

The system operational data collected during O&M visits indicates evidence of positive influence (i.e., increased DO and ORP, decreases in contaminant concentrations, and headspace oxygen) demonstrated by the ISCO system. Graphs for individual monitoring well changes in groundwater parameters over time are shown in **Appendix A**. The parameters include methyl tert-butyl ether (MTBE), tert-butyl alcohol (TBA), TPH-GRO, DO and ORP. Further discussion of individual parameter observations is presented below:

#### Contaminant Concentration Trends

Since the last operation report, one groundwater sampling event occurred (June 13 to 15, 2012). Significant reductions in contaminant concentrations have been observed in a majority of monitoring wells at the site. Nearest to the injection area, concentrations in monitoring well MW-13 remain at or near reporting limits with no evidence of rebound. At monitoring well MW-18S, MTBE continued its downward trend and dropped an additional 75% (754 µg/L) and TPH-GRO remained low (270 µg/L). At monitoring well MW-18D, MTBE decreased 42% (386 µg/L) and TPH-GRO remained low (141 µg/L). At monitoring well MW-15D, where a significant MTBE increase was observed during the last sampling event on April 3<sup>rd</sup>, the MTBE showed a significant reduction to 18.6 µg/L (a 99.6% reduction since April), while TBA and TPH-GRO were not detected. Further downgradient, at monitoring well MW-7, a 93% reduction in MTBE since April was observed (467 µg/L), and TPH-GRO remained low (111 µg/L). Concentrations at monitoring well MW-8 remained at or near reporting limits.

On the back side of the Green Valley Plaza, monitoring MW-17 remained near its previous level for MTBE (5% reduction, 1,900 µg/L) after demonstrating an 81% reduction during the previous sampling event. TPH-GRO increased moderately to 380 µg/L, but remained well below historic concentrations. Monitoring well MW-14S had an 80% reduction in MTBE (26.7 µg/L) near the reporting limit, after previously demonstrating reductions of 70% and 76% for MTBE and TPH-GRO, respectively. Monitoring well MW-14D (which is screened from 201 to 221 feet bgs) showed a slight MTBE increase to 1,410 µg/L and moderate TPH-GRO increase to 294 µg/L. Monitoring well MW-10 showed an increase in MTBE from 7.44 µg/L to 58.6 µg/L, while TPH-GRO remained at the reporting limit. Monitoring well MW-16 remained at or near reporting limits with no evidence of rebound.

#### *Dissolved Oxygen*

Dissolved oxygen readings remain significantly elevated (commonly above 10 mg/L) in monitoring wells MW-8, MW-13, MW-15D and MW-18S. Monitoring wells MW-7, MW-10, MW-14S, MW-14D, and MW-16 all averaged between 4 and 9 mg/L. Monitoring well MW-18D showed fluctuations and averaged 2.3 mg/L, and monitoring well MW-17 remained somewhat low with an average of 1.1 mg/L during the period.

#### *Oxidation-Reduction Potential (ORP)*

Oxidation-reduction potential (ORP) remains high in almost all monitoring wells, which indicates oxidizing conditions exist in the subsurface and the potential for aerobic hydrocarbon biodegradation also exists. The ORP in monitoring wells MW-7, MW-8, MW-10, MW-13, MW-14S, MW-14D, MW-15D, MW-16 and MW-17 all averaged between 191 and 285 mV during this operation period. Monitoring well MW-18D remained positive with an average of 108 mV. Monitoring well MW-18S continues to show a negative ORP with an average of -43 mV.

#### *Headspace VOC Monitoring*

Low headspace VOC readings continued to be observed at monitoring wells MW-7, MW-8, MW-13, MW-15D, MW-18S, MW-18D, and soil vapor points SV-1 and SV-2. The presence of VOCs in the headspace is likely a result of sparged air volatilizing or stripping VOCs present in the groundwater.

#### *Headspace Oxygen Monitoring*

Headspace oxygen readings were recorded above atmospheric levels in monitoring wells MW-7, MW-8, MW-13, MW-15D, MW-18S, and soil vapor points SV-1 and SV-2, indicating the presence of sparged vapors (which contain elevated levels of oxygen).

#### *Potable and Supply Well Trends*

No notable changes in concentrations as a result of the ISCO system operation have occurred in the eight private and public drinking water supply wells sampled throughout this pilot testing period.

Overall the ISCO injection system continues to demonstrate further success with reductions in contaminant concentrations and increases in DO throughout the targeted area, while monitoring has confirmed that no adverse effects in down gradient monitoring wells or any potable water supply well have resulted from system operation. GES continues to believe that this system has the ability to progress the Site toward long-term remedial goals, and continued operation of the system is warranted.

GES appreciates the continued guidance of the MDE on this project. If you have any questions or would like additional information please contact the undersigned at 800-220-3606, extension 3712 or 3706, respectively, or Herb Meade at 410-261-5450.

Sincerely,

Groundwater & Environmental Services, Inc.

Note: Geochemical field parameters from 11/31/2010 were collected on 11/30/2010 post ISCO pilot testing. Geochemical field parameters from 11/30/2010 were collected pre-ISCO pilot testing (baseline).

- <# = Less than the method detection limit of #
- $\mu\text{g/L}$  = Micrograms/Liter
- B3 = The prep blank associated with this sample had a result greater than the MRL. Data may be biased high.
- BTEX = Benzene, toluene, ethylbenzene, xylenes
- L1 = This result was above the calibration range; therefore it is an estimated value
- L10 = This sample was analyzed at a dilution due to the matrix. Reporting limits were adjusted accordingly.
- L12 = The prep method LCS spike recovery was outside acceptance limits. The batch results were accepted based on the acceptable recovery of the other associated QC.
- LA = Sample for dissolved metal analysis was filtered at the laboratory
- mg/L = Milligrams/Liter
- MTBE = Methyl Tertiary Butyl Ether
- NA = Not Available or Not Analyzed for that specific compound
- NR = Not recorded
- ppm = Parts per million
- QA = The RPD result exceeded the QC control limits for the duplicate sample analyzed.
- QK = This result was above the calibration range; therefore it is an estimated value.
- TPH-DRO = Total petroleum hydrocarbons - diesel range organics
- TPH-GRO = Total petroleum hydrocarbons - gasoline range organics
- V4 = Check standard was outside the QC range. Data accepted based on acceptable LCS.

(##) = Depth to bottom of well (ft)  
 [##] = Length of the Screened Interval (ft)  
 D1 = The RPD result exceeded the QC control limits for the duplicate sample analyzed.  
 DRY = No water for sampling  
 mg/L = Milligrams/liter  
 mV = Millivolts  
 NR = Not reported  
 ppm = Parts per million  
 SR = The surrogate recovery was outside the established control limits. The data was accepted based on acceptable batch QC.  
 umhos/cm = micromhos per centimeter

Notes: &lt;#

= Less than the method detection limit of #

µg/L

= Micrograms/Liter

B3

= The prep blank associated with this sample had a result greater than the MRL. Data may be biased high.

BTEX

= Benzene, toluene, ethylbenzene, xylenes

D1

= The RPD result exceeded the QC control limits for the duplicate sample analyzed.

B1

= Blank results were above the MDL, therefore sample results may be biased high.

L1

= This result was above the calibration range; therefore it is an estimated value

L12

= The prep method LCS spike recovery was outside acceptance limits. The batch results were accepted based on the acceptable recovery of the other associated QC.

LA

= Sample for dissolved metal analysis was filtered at the laboratory

mg/L

= Milligrams/Liter

MTBE

= Methyl Tertiary Butyl Ether

NA

= Not Available or Not Analyzed for that specific compound

NR

= Not recorded

ppm

= Parts per million

QA

= The RPD result exceeded the QC control limits for the duplicate sample analyzed.

QK

= This result was above the calibration range; therefore it is an estimated value.

S2

= Sample for dissolved metal analysis was filtered at the laboratory

TDS

= Total dissolved solids

TOC

= Total organic carbon

TSS

= Total suspended solids

TPH-DRO

= Total petroleum hydrocarbons - diesel range organics

TPH-GRO

= Total petroleum hydrocarbons - gasoline range organics

V4

= Check standard was outside the QC range. Data accepted based on acceptable LCS.

V8

= LCS value was outside the QC range. Data accepted based on acceptable check standard.

VH

= LCS value was outside the QC range. Data accepted based on acceptable check standard.

Notes:

- <# = Less than the method detection limit of #
- $\mu\text{g/L}$  = Micrograms/Liter
- B3 = The prep blank associated with this sample had a result greater than the MRL. Data may be biased high.
- BTEX = Benzene, toluene, ethylbenzene, xylenes
- D1 = The RPD result exceeded the QC control limits for the duplicate sample analyzed.
- L12 = The prep method LCS spike recovery was outside acceptance limits. The batch results were accepted based on the acceptable recovery of the other associated QC.
- mg/L = Milligrams/Liter
- MS = The spike recovery was outside acceptance limits for the MS and/or MSD due to sample matrix interferences. The batch was accepted based on acceptable CCV recovery.
- MTBE = Methyl Tertiary Butyl Ether
- NA = Not Available or Not Analyzed for that specific compound
- NR = Not recorded
- ppm = Parts per million
- QA = The RPD result exceeded the QC control limits for the duplicate sample analyzed.
- QK = This result was above the calibration range; therefore it is an estimated value.
- TDS = Total dissolved solids
- TOC = Total organic carbon
- TSS = Total suspended solids
- TPH-DRO = Total petroleum hydrocarbons - diesel range organics
- TPH-GRO = Total petroleum hydrocarbons - gasoline range organics
- V8 = LCS value was outside the QC range. Data accepted based on acceptable check standard.
