(CIFC), is pleased to submit the Fourth Quarter 2024 Monitoring Report for the Carroll/Former Green Valley Citgo facility (Site). In summary, the following activities were conducted at the Site this monitoring period:

- Quarterly fluid-level gauging of nine (9) monitoring wells and six (6) tank field wells was completed November 11, 2024;
- Sampling of five (5) quarterly and four (4) annual monitoring wells was completed November 11 and 12, 2024;
- Quarterly sampling at two (2) residential point-of-entry (POET) systems, 3994 and 3992 Farm Lane, was completed on November 11 and 12, 2024, respectively; and,
- Semiannual sampling of the Green Valley Plaza (GVP) supply well system (influent only) was completed on November 11, 2024.

The 3990 Farm Lane POET system was not sampled in the Fourth Quarter 2024 as the resident was unavailable.

GES will be submitting the Annual Remedial Evaluation Report for 2024 concurrently with this Fourth Quarter 2024 Monitoring Report. The Annual Report includes requests for reduction of the site monitoring program as discussed during the Administrative Consent Order status meeting held between CIFC, GES and MDE on November 19, 2024.

SCHEDULE OF ROUTINE ACTIVITIES

Groundwater Sampling:	-Quarterly – Wells MW-7, MW-14D, MW-17, MW18S-R, and MW-18D -Annually – Wells MW-1, MW-4, MW-5, and MW-13 *Wells MW-2, 6, 8, 9, 10, 11, 12, 14S, 15D, and MW-16 were abandoned and removed from the current monitoring program in 4Q 2017 with MDE approval granted October 17, 2017.
Laboratory Analyses:	Full-suite volatile organic compounds (VOCs), oxygenates including methyl tert-butyl ether (MTBE), and naphthalene via EPA Method 8260.

SCHEDULE OF ROUTINE ACTIVITIES (cont.)

Table 1 summarizes current and historical analytical results from monitoring wells in the sampling program. **Figure 1** presents a Site Map that includes the locations of the monitoring wells, adjacent residences, and important land features.

Monitoring Well Field Data:
-Dissolved Oxygen (DO)
-Oxidation Reduction Potential (ORP)
-pH
-Temperature
-Specific Conductivity

Table 2 presents current and historical field parameters measurements from monitoring wells in the sampling program. The supporting Fourth Quarter 2024 monitoring well sampling data sheets are attached as **Appendix B**.

Non-Transient, Non-Community Supply Well Sampling

Location	Well Number(s)	Sampling Frequency:
Green Valley Plaza (GVP):	FR-13-0386[A]	Quarterly
	FR-94-1281[B]	Quarterly
	FR-94-1233[B]	Quarterly

[A] Supply well FR-13-0386 appears to be the only single, active source well for GVP system and therefore is represented by the GVP "Influent" potable well sample.

[B] Supply wells that appear disconnected from current treatment system and cannot be sampled.

Laboratory Analyses: Target VOCs List, including oxygenates and napthalene, via EPA Method 524.2.

Note: FR-81-5955, FR-88-1394, FR-88-1366, FR-73-4918, FR-73-6674, and FR-73-7687 were removed from the current monitoring program with MDE approval granted July 29, 2015.

Non-Transient, Non-Community Point-of-Entry Treatment (POET) System Sampling

Location	System Sample Location	Sampling Frequency:
Green Valley Plaza (GVP):	-Influent ("Inf") *	Semi-annually

Laboratory Analyses: Full VOCs List, including oxygenates and naphthalene, via EPA Method 524.2.

Note: CIFC was released from POET of the GVP by the MDE in a directive dated January 18, 2023. The influent water at this location is now sampled semi-annually. A Water Filtration System Offer of Ownership or Removal letter was sent to the GVP ownership dated March 27, 2023. No response from GVP ownership has been received.

General Comment & Type of Equipment Used (pumps/YSI meter/ect./caibration info):

Stabilization is achieved when three successive readings are within
- ± 3% for temperature,
- ± 0.1 for pH,
- ± 3% for specific conductivity,
- ± 10 for reduction-oxidation potential

* ± 10% for DO-values that are greater 0.5 mg/L, if three values are <0.5 mg/L, consider the values stabilized.

** ± 10% for Turbidity for values greater than 10 NTU; if three values are <10 NTU, consider the values stabilized.

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Job Narrative
410-196696-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 11/13/2024 4:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.3°C.

Receipt Exceptions
A trip blank was not submitted for analysis with this sample shipment; and was not listed on the Chain of Custody (COC).

GC/MS VOA
Method 524.2_Preserved: Volatile compounds have been detected above the RL for the following samples: 3994-FARM-INF (410-196696-3) and 3992-FARM-INF (410-196696-7). Since a field reagent blank/trip blank was not submitted, any potential contamination from the sampling/transport process cannot be assessed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Job Narrative
410-196699-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 11/13/2024 4:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.3°C.

Receipt Exceptions
A trip blank was not submitted for analysis with this sample shipment; and was not listed on the Chain of Custody (COC).

GC/MS VOA
Method 8260C_LL: The continuing calibration verification (CCV) associated with batch 410-577684 recovered outside acceptance criteria, low biased, for t-Butyl alcohol. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated..

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.
