FOR THE CALENDAR YEAR 1979
FATALITY REPORT NO. 1

Fatal accident to Junior Ross DeWitt (age 34), Terra Alta, West Virginia, at the deep mine of Mettiki Coal Corporation, located near Table Rock, Maryland.

A fatal accident occurred at Mettiki Coal Corporation on Wednesday, April 18, 1979, at approximately 9:45 p.m.

The fatality at the Gobbler's Knob (B) Mine was Junior Ross DeWitt, age 34, of Terra Alta, West Virginia. He was a continuous miner operator, and after cutting the last cross cut through, he backed the miner out about 20 feet from the mine face. He and the acting mine foreman, Jim Kelly, (who also runs the roof bolting machine) went back to the face to examine the roof. While they were examining the roof, a slab of rock fell, striking DeWitt in the back.

Jeff Layman, miner operator helper, standing at the miner, saw the rock start to gap and yelled to the two men to get out. Jim Kelly turned to the upper right of the coal seam, and DeWitt was knocked parallel with the heading. When he was struck by the rock it caused severe liver damage.

The accident was also investigated by MSHA Federal inspectors. We came to the conclusion that Mr. DeWitt was out beyond the last roof support which caused the accident.

RECOMMENDATIONS OF DISTRICT INSPECTOR:

I recommend that the workmen stay in compliance with the approved roof control plan for this mine and that workmen shall not advance beyond the protection of supported roof except to install temporary supports.

Inspector in charge of District—James Droppleman

FATALITY REPORT NO. 2

Fatal accident to William G. Bowmar (age 52), Tunnelton, West Virginia, at the deep mine of Mettiki Coal Corporation, located near Table Rock, Maryland.

On Wednesday, June 20, 1979, at approximately 9:00 a.m. a fatal roof fall accident occurred near the face area of No. 7 entry straight main, Beaver Run Mine of Mettiki Coal Corporation. Resulting was the death of William G. Bowmar, Section Foreman.

After examining the roof of No. 7 entry, Bowmar went back along the side of the continuous miner, 22 feet from the face. Part of the roof fell, riding out three aluminum cross bars, pinning Mr. Bowmar between the miner and rock.

RECOMMENDATIONS OF DISTRICT INSPECTOR:

I recommend that during the penetration of the face when abnormal roof conditions are encountered, that no more than four temporary supports (cross bars) be set at three foot centers or less, with every cross bar supported with a wooden post. Permanent supports must be installed before further advances are made.

I also recommend that the safety engineer hold classes with all safety inspectors and workmen concerning roof control, equipment, mine maintenance, rib control and safety. This must be started immediately.

Inspector in charge of District—James Droppleman

FATALITY REPORT NO. 3

Fatal accident to Wilbur Burton Bowser (age 38), Accident, Maryland, at the Teets Daylighting Project No. F12-704, located near McHenry, Maryland.

The fatal accident occurred on December 31, 1979, at approximately 9:15 a.m., on an abandoned mine drainage abatement project, Project No. F12-704, located in Garrett County, near McHenry, Maryland. The contractor on the Project is Allegheny Mining Corporation, Mt. Storm, West Virginia, a licensed Maryland coal operator.

Mr. Harold Sherwood, a project superintendent for Allegheny Mining and two other employees, Wilbur B. Bowser and Rodney W. Tichnell, had started to work at approximately 7:00 a.m. They had worked at another Allegheny Mining permit (no. 277) as well as at the Daylighting Project site. Mr. Bowser had driven the front-end loader to the Project site from Permit No. 277.

At the time the accident occurred, only two employees were at the Project site working, Mr. Bowser and Mr. Tichnell. They were preparing to dewater the pit in order that coal could be loaded from the site on the next working day. Mr. Tichnell was in the pit at the time of the accident.

The accident occurred as Mr. Bowser, operating a Terex 72-51 Loader, was backing the loader down a 15-18° ramp leading to the exposed coal in the pit. The ramp was constructed of spoil material, including material taken from immediately above the coal seam. There was also an embankment on the southwest side of the ramp. The material in the ramp was frozen and was snow covered and icy. Apparently, as Mr. Bowser backed the loader down the ramp, with the loader bucket lowered and scraping the ramp surface, the right tires on the loader and the right corner of the bucket ascended the embankment on the southwest side of the ramp causing the loader to upset. The loader turned onto its left side and then proceeded to turn onto its top. The loader was not equipped with a roll cage. The weight of the loader caused the steel cab to completely collapse, trapping Mr. Bowser in the cab and crushing him.

Actual rescue operations to extricate Mr. Bowser from the loader were started at approximately 12:00 noon and continued until approximately 2:00 p.m., when Mr. Bowser was removed from the loader by the Northern Garrett County Rescue Squad.

The victim died of asphyxiation due to chest compression.
Inspector in charge of District—Stephen M. Layton

REVEGETATION OF STRIP MINED LANDS

Fred L. Bagley

The Bureau of Mines received planting reports totaling 1,317 acres eligible for revegetation bond release after the 1979 growing season which ended in September, 1979.

Prior to release of revegetation bonds, the State's surface mining law and rules and regulations require the following:

(1) A minimum of two growing seasons after planting for evaluation to determine if:

- (a) the herbaceous coverage is at least 80 percent;
- (b) bare areas do not exceed 2,500 square feet;
- (c) the required legume species comprise at least 10 percent of the coverage;
- (d) erosion, rills and gullies do not exceed 9 inches in depth;
- (e) there are no depressions in the revegetated area; and
- (f) if trees and shrubs are planted, at least 700 stems per acre well distributed and living.

Longer evaluation time may be required, even if the acres meet these criteria, if the conditions of the vegetation are questionable.

(2) The Bureau must advertise the pending bond release at least once a week for four consecutive weeks in a newspaper of general circulation in the jurisdiction affected.

(3) The operator must notify adjoining property owners, local governmental agencies, sewage authorities and water companies, if involved, of the pending bond release.

Members of the State Land Reclamation Committee visited on site the areas eligible for bond release during the fall of 1979 to determine if the criteria for bond release had been accomplished.

At the November meeting, 982 acres of the 1,317 total eligible acres were approved for release by the Committee. All acres were planted with a grass and legume mixture to insure adequate erosion control protection. Trees and shrubs were planted on 204 acres for forestry purposes and for wildlife habitat enhancement.

The primary reason for disapproval of the revegetation bond release was for failure to meet the 10 percent legume requirement.

Under a policy adopted in 1977, the public was given the opportunity to participate in the State's reclamation evaluation process by attending revegetation tours conducted during the fall. During 1977 and 1978, these tours were well attended; however, in 1979 public attendance for this tour was poor.

The Bureau will continue these tours as long as Maryland citizens show an interest in them.

During the early spring of each year, a listing of acres eligible for revegetation bond release is compiled. Copies of this listing and tour information are available at the Bureau of Mine's office in Westernport, Maryland.

ABANDONED MINE LANDS RECLAMATION

Patrick E. Gallagher

A total of 77 acres of abandoned mines were reclaimed by 11 different contracts with operators for backfilling, revegetation, and diversion construction. The total cost of all 11 contracts was \$75,575. The source of these funds is the Bituminous Coal Open-Pit Mining Reclamation Fund.

The Bureau participated in a reclamation project on the Frostburg State College campus which included backfilling and revegetation of approximately 16 acres of an abandoned surface mine. A contract for \$77,000 was awarded for the construction using funds from an Appalachian Regional Commission grant and the Bituminous Coal Open-Pit Mining Reclamation Fund.

In addition, the Bureau initiated a construction contract to abate the last known abandoned deep mine drainage point in the Cherry Creek watershed. The work is to be accomplished by a method known as daylighting; that is, using conventional surface mining methods, the remaining deep mine workings are removed to eliminate groundwater from coming in contact with the acid bearing coal and rock. The contract cost of the project is \$89,900 and the funds are appropriated from an Appalachian Regional Commission grant and the Water Quality Restoration Loan of 1970. The project is expected to be completed in three years.

The Bureau also received emergency funds from the U.S. Department of Interior through the Office of Surface Mining to relieve imminent dangers to life and property from abandoned deep mines in the Frostburg and Barton areas. Flyash and cement are being injected into the deep mines under two dormitory buildings and a dining hall on the Frostburg State College campus. The flyash and cement will provide support under the buildings and reduce the likelihood of future subsidence under the structures. The Bureau also initiated a project to prevent further flooding from an abandoned deep mine in the Temperance Row area of Barton. A collapsed deep mine had impounded water, built up pressure inside and blew-out the collapsed portion of the mine subsequently flooding seven residents.

In 1976, the Bureau initiated a construction contract to reclaim an area of approximately 36 acres of abandoned mine known as the Grantsville Dump. Since the project's completion, the Bureau has observed the progression of revegetation on the area and the pictures shown here document the project's success:

Grantsville Dump area as it existed prior to the beginning of the reclamation project.

The Grantsville Dump area after reclamation. The area was planted with a mixture of grasses, including Kentucky 31 Tall Fescue and Birdsfoot Trefoil, and wildlife shrubs.

Meetings and Time

The Land Reclamation Committee meets at the City Building in Westernport, Maryland. All meetings are open to the public and are announced in the Maryland Register and local papers.

Functions and Duties of the Committee

The Land Reclamation Committee oversees land reclamation activities related to the surface mining of coal in Maryland. It is specifically directed by statute (Annotated Code of Maryland, Section 7-205/b/) to: ". . .study, recommend, and approve all procedures for reclamation, conservation, and revegetation of any area affected by open-pit mining within the State. . ."

Specific duties addressed by the Committee during its monthly meetings include:

1. Review and approval of reclamation plans.
2. Review and approval of Annual Mining and Reclamation Progress Reports, Final Reports, and revegetation bond releases.
3. Establish amounts of revegetation bond for each operation.

The Land Reclamation Committee visits every site for which mining permit applications have been filed to determine the suitability of the reclamation plan. The Committee also examines sites for purposes of approving annual progress reports and final reports.
