24% and suburban

of the bacteria that pollutes our urban waterways is from dog waste.

#### 3 billion

fecal bacteria are carried by the average dog dropping, according to the Center for Disease Control.

### 14%

of Americans tested positive for waste-borne roundworms, a recent CDC study found.

# BUT, aren't plastic doggie bags even worse for the environment?"

Runoff carrying untreated dog waste infects our waterways with bacteria that can sicken people and pets, harm aquatic organisms, and contaminate water sources. A landfill is contained and lined. No special plastic bags needed; use what you have
