

TESTING FOR LEAD IN DRINKING WATER FOR MARYLAND PUBLIC AND NONPUBLIC SCHOOLS

Reporting Period July 2, 2021, to July 1, 2022

Prepared for:

Wes Moore, Governor
State of Maryland
and
the Maryland General Assembly

Maryland
Department of
the Environment

Serena McIlwain
Secretary

Mohammed Choudhury
State Superintendent

Executive Summary

During the 2017 legislative session, House Bill (HB) 270 passed and was signed into law by Governor Hogan, providing a framework to reduce Maryland school children's exposure to lead in drinking water. HB 270 directed the Maryland Department of the Environment (MDE), in consultation with the Maryland State Department of Education (MSDE), Maryland Department of General Services (DGS), and Maryland Occupational Safety and Health (MOSH), to adopt regulations to require periodic testing for the presence of lead in each drinking water outlet located in an occupied public or nonpublic school building. The law required MDE to establish a stakeholder group and to gather information about the testing processes, protocols, and efforts undertaken by schools to test for and remediate lead. The law also required MDE, in consultation with MSDE, to provide a mechanism to grant waivers from testing to schools under certain circumstances. Furthermore, on or before Dec. 1, 2018, and each year thereafter, MDE and MSDE must jointly report to the Governor and the Maryland General Assembly on the findings of the lead testing conducted by schools.

The legislation defines an elevated level of lead as a lead concentration in drinking water that exceeds the standard recommended by the U.S. Environmental Protection Agency (EPA) in the most recent technical guidance (*3Ts for Reducing Lead in Drinking Water in Schools*). The Action Level for lead in the EPA's technical guidance, effective at the time, was 20 parts per billion (ppb).

During the 2019 legislative session, HB 1253 passed and was signed into law by Governor Hogan, which strengthened the lead protection measures established in HB 270 by setting a lead level of no more than 5 ppb as a goal for schools. The law also provided a funding mechanism for schools to remediate drinking water outlets that exceeded this level and expanded the information that must be reported to the Governor and the Maryland General Assembly.

During the 2021 General Assembly session, HB 636 passed and was signed into law by Governor Hogan to further reinforce the lead protection measures established in both HB 270 and HB 1253 by altering the definition of an elevated level of lead from 20 to 5 ppb (effective June 1, 2021, and applied retroactively). This change significantly increased the number of drinking water outlets that were required to be removed from service immediately and remediated. In addition, the new law set a deadline of Aug. 1, 2022, for schools to complete remediation of drinking water outlets that had lead levels between 5 and 20 ppb if the samples were analyzed by a state-certified laboratory by June 1, 2021.

This report, which will be made available to Maryland citizens through MDE's website, provides information on the validated lead sample results of lead testing in drinking water in accordance with Maryland's 3-year requirement during the reporting cycle ending July 1, 2022, including:

- (1) The name and address of each school that has tested its drinking water for lead and reported the test results to the state during the reporting period (Table 1);
- (2) The name and address of each school found to have elevated levels of lead in its drinking water (Table 2); and

- (3) The type, location in the building, and use of each water outlet with an elevated level of lead (Table 2).

This report also includes results from validated lead sampling during previous reporting cycles (i.e., July 2, 2017, through July 1, 2021) that were not included in previous reports (Tables 3 and 4).

Over 680 schools submitted results of lead samples collected during the current reporting period (July 2, 2021, through July 1, 2022). Of these schools, MDE was able to review results from 381 schools (355 public schools, one charter school, and 25 nonpublic schools). Review of the remaining schools' results is ongoing. Proper sample collection, recordkeeping, and reporting at the schools, laboratory analysis, and data review by MDE, are labor-intensive and time-consuming processes, and data received by MDE is often incomplete or contains errors. Due both to the quality and completeness of data received as well as the exacting nature of its review, MDE was only able to review and report on slightly more than half of the schools submitting lead sample results during this reporting period by the deadline specified in the legislation.

Ensuring rigorous quality control while also conducting data review in a timely manner constitutes a significant challenge for the ongoing implementation of the effort to test for lead in drinking water in schools. In response, MDE is undertaking several initiatives to further improve the quality, integrity, and tracking of the sampling and reporting process. MDE intends to use grant funds, awarded under Section 2107 of the Water Infrastructure Improvements for the Nation (WIIN) Act, to develop and deploy a QR code-based, mobile-capable application to streamline sample collection and data tracking for drinking water outlets, and facilitate more rapid and accurate reporting from schools both to laboratories and MDE. Additionally, MDE is continually updating and refining its technical guidance, and will be developing video training materials in the coming year. These efforts will improve data quality and expedite the review process for MDE, reducing the likelihood of a growing backlog.

Of the 381 schools, 366 schools (341 public schools, one charter school, and 24 nonpublic schools) were determined to have one or more valid samples (i.e., collected and analyzed in accordance with Code of Maryland Regulations (COMAR) 26.16.07.07). Of these 366 schools, 67% (236 public schools and 8 nonpublic schools) had one or more sample results exceeding Maryland's lead Action Level (AL) of 5 ppb. Over 8,600 valid samples were collected from these 366 schools, and approximately 17.5% of these samples had lead levels exceeding 5 ppb. When outlets used for drinking, food preparation, or cooking are found to have elevated levels of lead in the water, schools are required to prevent access to these outlets within 24 hours.

Maryland's goal is to eliminate any occurrence of elevated levels of lead in drinking water provided to approximately 1 million children by the nearly 3,000 public and nonpublic schools in the state. The significant reduction in the AL from 20 ppb to 5 ppb, effective June 1, 2021, coupled with continued testing and remediation, further reduces exposure to lead in drinking water, and is an important step in achieving this goal. In addition, the remediation funding mechanism provided under HB 1253 further supports MDE's goal to eliminate any occurrence of elevated lead levels in drinking water in schools.
