2025 Deep Creek Daily Lake Level and Rainfall Table
2025 Daily Variances of Upper and Lower Rule Band

APPENDIX B - 2025 Summary of Temperature Excursions
2025 Temperature in the Youghiogheny River at Sang Run Bridge
2025 Temperature Enhancement Plan Daily Log Sheets

APPENDIX C - Provisional 2025 Daily Mean Flow Data from the USGS Hoyes Run Gage
2025 Bypass Valve Operation Daily Log Sheets

APPENDIX D - 2025 Dissolved Oxygen Data & Generation Graphs
2025 Dissolved Oxygen Concentrations Collected below the Deep Creek Station Tailrace

APPENDIX E - 2025 Zebra Mussel Monitoring Logs

1.0 INTRODUCTION

Brookfield Power Piney & Deep Creek, LLC (Brookfield) holds a Water Appropriation and Use Permit (Permit), issued on September 2, 2020, by the Maryland Department of Environment (MDE), providing for the continued operation of the Deep Creek Hydroelectric Project (Project). Permit Condition 23 requires Brookfield to submit an annual report to the MDE, which includes data and information as specified in the Permit Conditions listed below.

- Lake level monitoring (Condition 15)
- Water temperature monitoring (Condition 16)
- Minimum flow release monitoring (Condition 17)
- Dissolved oxygen (DO) monitoring (Condition 18)
- Releases unsuitable for whitewater recreation (Condition 19)
- Zebra mussel monitoring (Condition 21)

1.1 Lake Level Monitoring

Brookfield operates the Project according to the Operating Rules specified in the 2020 Permit such that water elevations in Deep Creek Lake are maintained within the Operating Rule Band except that excursions of up to 0.3 feet above 2461' shall not last more than 10 consecutive days and excursions of up to 0.3 feet above the upper rule band, but below 2461', shall not last more than 21 days, and except in the event of unusual or emergency conditions as defined in the Permit. The Upper Rule Band (URB) and Lower Rule Band (LRB) are the highest and lowest desirable reservoir levels at the end of each month.

Pursuant to the 2020 Permit, Brookfield measures and records water elevations in Deep Creek Lake via a gage at the intake structure near the dam at approximately the same time each day. Lake level monitoring data is included in Appendix A.

1.1.1 End-of-Month Lake Levels

Reservoir levels were above/below the URB at the end of the month as presented in Table 1.

TABLE 1
END-OF-MONTH LAKE LEVEL (IN FEET) ABOVE / BELOW URB

MONTH OF YEAR	URB	FEET ABOVE (+) or BELOW (-) URB
January	2457.9	-0.84
February	2457.9	-0.13
March	2459.5	-0.80
April	2461.0	-0.02
May	2461.0	+0.10
June	2461.0	-0.28
July	2461.0	-0.59
August	2460.0	-0.58
September	2459.0	-0.48
October	2458.0	-0.11
November	2457.9	-0.59
December	2457.9	-0.24

1.1.2 Daily Lake Levels

In 2025, the Project area received 53.27 inches of rainfall over the year. Appendix A provides a graphical and tabular summary of daily variances of the URB and LRB. In 2025 the lake level remained between the URB and LRB except for a brief duration during the spring when it exceeded the URB for a short time.

1.2 Water Temperature Monitoring

Brookfield monitored water temperature in the Youghiogheny River in accordance with the Deep Creek Station Water Temperature Enhancement Plan (approved June 8, 1996, revised September 2001, January 2009, and April 30, 2020). The plan was designed to maintain water temperatures below 25 degrees Celsius (ºC) in the Youghiogheny River.

Water temperature is measured from a temperature probe seasonally installed and maintained by Brookfield in the Youghiogheny River at the Sang Run Bridge. The instrument records water temperature at 5-minute intervals, has a monitoring accuracy of 0.01°C, and is calibrated in accordance with the manufacturer's instructions. Brookfield retrieves data via telephone modem from the instrument.

By reports dated July 14, August 11, September 12, and October 13, 2025, Brookfield provided the MDE with dates when temperature excursions occurred at the Sang Run temperature monitoring station and an explanation for those excursions. As described in the monthly reports, temperature excursions at the Project were due in part to the inherent uncertainty of the model. This model attempts to predict future temperatures of the Youghiogheny River, based on air temperature readings, cloud cover factor, cloud cover forecast, river flow, and actual water temperature readings. Due to the multitude of parameters used in the predictions, inherent variability in the predicted temperatures exists.

Due to high air temperatures and low river levels, temperature excursions occurred at the Project on one (1) day in June, five (5) days in July, five (5) days in August and zero (0) day in September. Brookfield conducted 61 specific temperature enhancement releases (TERs) in 2025 as compared to 16 in 2019, 37 in 2020, 25 in 2021, 58 in 2022, 27 in 2023, and 70 in 2024.

Appendix B presents the Water Temperature Enhancement Plan data prediction sheets, the results of Sang Run temperature monitoring, and a summary of temperature excursions during the period from June 1 through September 15, 2025. Also included is temperature data from May 15 to May 31, as required in the recently issued permit.

1.3 Minimum Flow Release Monitoring

Brookfield operated the flow bypass valve in accordance with the Deep Creek Station Flow Bypass Operation Protocol (May 1995, revised September 2001 and August 2012). The flow bypass protocol requires Brookfield to maintain a minimum flow of 40 cubic feet per second (cfs) in the Youghiogheny River immediately downstream of the tailrace. Brookfield monitored the daily

river flows at the Hoyes Run Gage (USGS Gage No. 03076100), which is located approximately ¼ mile downstream of the tailrace outflow. As required by the protocol, when calculated flows downstream of the tailrace are below 40 cfs, Brookfield may be required to open a bypass valve to release enough water to maintain 40 cfs.

The bypass was operated on 29 days due to low river levels in 2025. Appendix C includes the Bypass Flow Monitoring Log Sheets and USGS Provisional Water Discharge Data from the Hoyes Run Gage.

There were no minimum flow deviations in 2025.

In accordance with Condition 17 of the permit (GA1992S009(09)), we are required to provide a continuous flow of 9 cfs in the tailrace, during the months June, July, August and September even when there is no minimum bypass flow as required by this condition.

1.4 Dissolved Oxygen Monitoring

Brookfield operated the DO enhancement weir during 2025 in accordance with the Dissolved Oxygen Enhancement Operations and Monitoring Protocol approved by the MDE on January 6, 1995. In 2025, automated monitoring was conducted on a 24/7 basis for both on and off generation periods from June 1 through October 1. A HOBO dissolved oxygen data logger recorded readings at 15-minute intervals at the confluence of the tailrace and Youghiogheny River. A summary of the DO data is provided below and shown in tables and graphs provided in Appendix D. Maryland state water quality standards require an instantaneous minimum DO reading of no less than 5.0 mg/L and a daily average of 6.0 mg/L.

As indicated below and shown on the graphs in Appendix D, DO concentrations at the Project steadily decrease throughout the summer months with the exception of sharp spikes in DO concentrations during periods of generation at the Project.

- The daily average DO concentration in June was 6.93 milligrams per liter (mg/L) with a minimum concentration of 3.40 mg/L and a maximum concentration of 13.95 mg/L.

- The daily average DO concentration in July was 5.34 mg/L with a minimum concentration of 1.84 mg/L and a maximum concentration of 14.31 mg/L.
- The daily average DO concentration in August was 4.09 mg/L with a minimum concentration of 1.61 mg/L and a maximum concentration of 14.96 mg/L.
- The daily average DO concentration in September was 3.83 mg/L with a minimum concentration of 1.14 mg/L and a maximum concentration of 6.46 mg/L.

Please note, there are a few very low readings in June that we believe to be biofouling on the probe. Also, in the beginning of the season, the data logger was inadvertently set to record temperature and DO every 5 minutes resulting in a plethora of data. On August 16, there was an equipment failure resulting in missing data for approximately 12 hours. When the equipment was repaired, the data logger was reset to record every 15 minutes.

The new permit issued on September 2, 2020 required Brookfield to ensure all wicket gate losses and bypass discharges meet Maryland's dissolved oxygen water quality standards upon entrance to the Youghiogheny River. Brookfield submitted a DO Mitigation Plan to the MDE on November 30, 2020. After consulting with a lake management company, Brookfield installed an aeration system in the tailrace in late fall 2021, which then underwent testing and some modifications. The system was operational in 2025 and adjusted throughout the season including the relocation of aeration panels to achieve better results. This will continue to be fine-tuned.

When units are operating, water goes over the weir as part of our existing DO mitigation system. Water typically raises approximately 6-8 feet in the tailrace. There was a concern about potential backpressure on the new system if running during periods of generation. To test in 2022, a 30-minute delay was implemented before the aeration system would come online. This would allow water in the tailrace to reduce before the blower turned on. It was ultimately found that DO dropped quickly during unit shutdown because of this. The low DO, which averages around 2.30, lasts approximately 60-90 minutes and then comes back up. By late in the 2022 season, the delay was adjusted down to 10-15 minutes, which seemed to help. It will be a continuous balance between the two systems.

It should be noted that during summer months, we saw DO numbers in Deep Creek Lake near the dam reduce to zero. By operating the aeration system in the tailrace, we were able to get DO

up to or close to 5.0. On the graphs in Appendix D, DO is shown as improving this year during non-generation periods.

Below is data showing DO readings taken at Deep Creek Dam from various depths. DO readings at the bottom of the lake, where the plant intake is located (approximately 20 meters down), is anoxic all summer. The average DO for June to October 2025 in the lake was 3.8 mg/l. The average DO for June to October 2025 in the Deep Creek plant tailrace is 5.29 mg/l. This data can be found online at https://eyesonthebay.dnr.maryland.gov/dcl/DCL_data.cfm.

1.5 Releases Unsuitable for Whitewater Recreation

Permit Condition 19 outlines several operating rules designed to enhance whitewater boating opportunities in the Youghiogheny River.

Permit Condition 19.A provides a standard whitewater release (WWR) schedule, a special WWR schedule, and a provision that allows Brookfield to combine temperature enhancement releases with scheduled WWR. These conditions apply from April 15 through October 15, annually.

Permit Condition 19.B provides additional operating rules that place conditions on the operations of the Deep Creek Project based on flows at the Friendsville Gauge and water levels at the Deep Creek Lake Gauge.

More specifically, Permit Condition 19.B.V allows Brookfield to employ either a "3rd Hour Regulation" or an "All Hour Regulation" approach for plant operations, in addition to the previously referenced conditions.

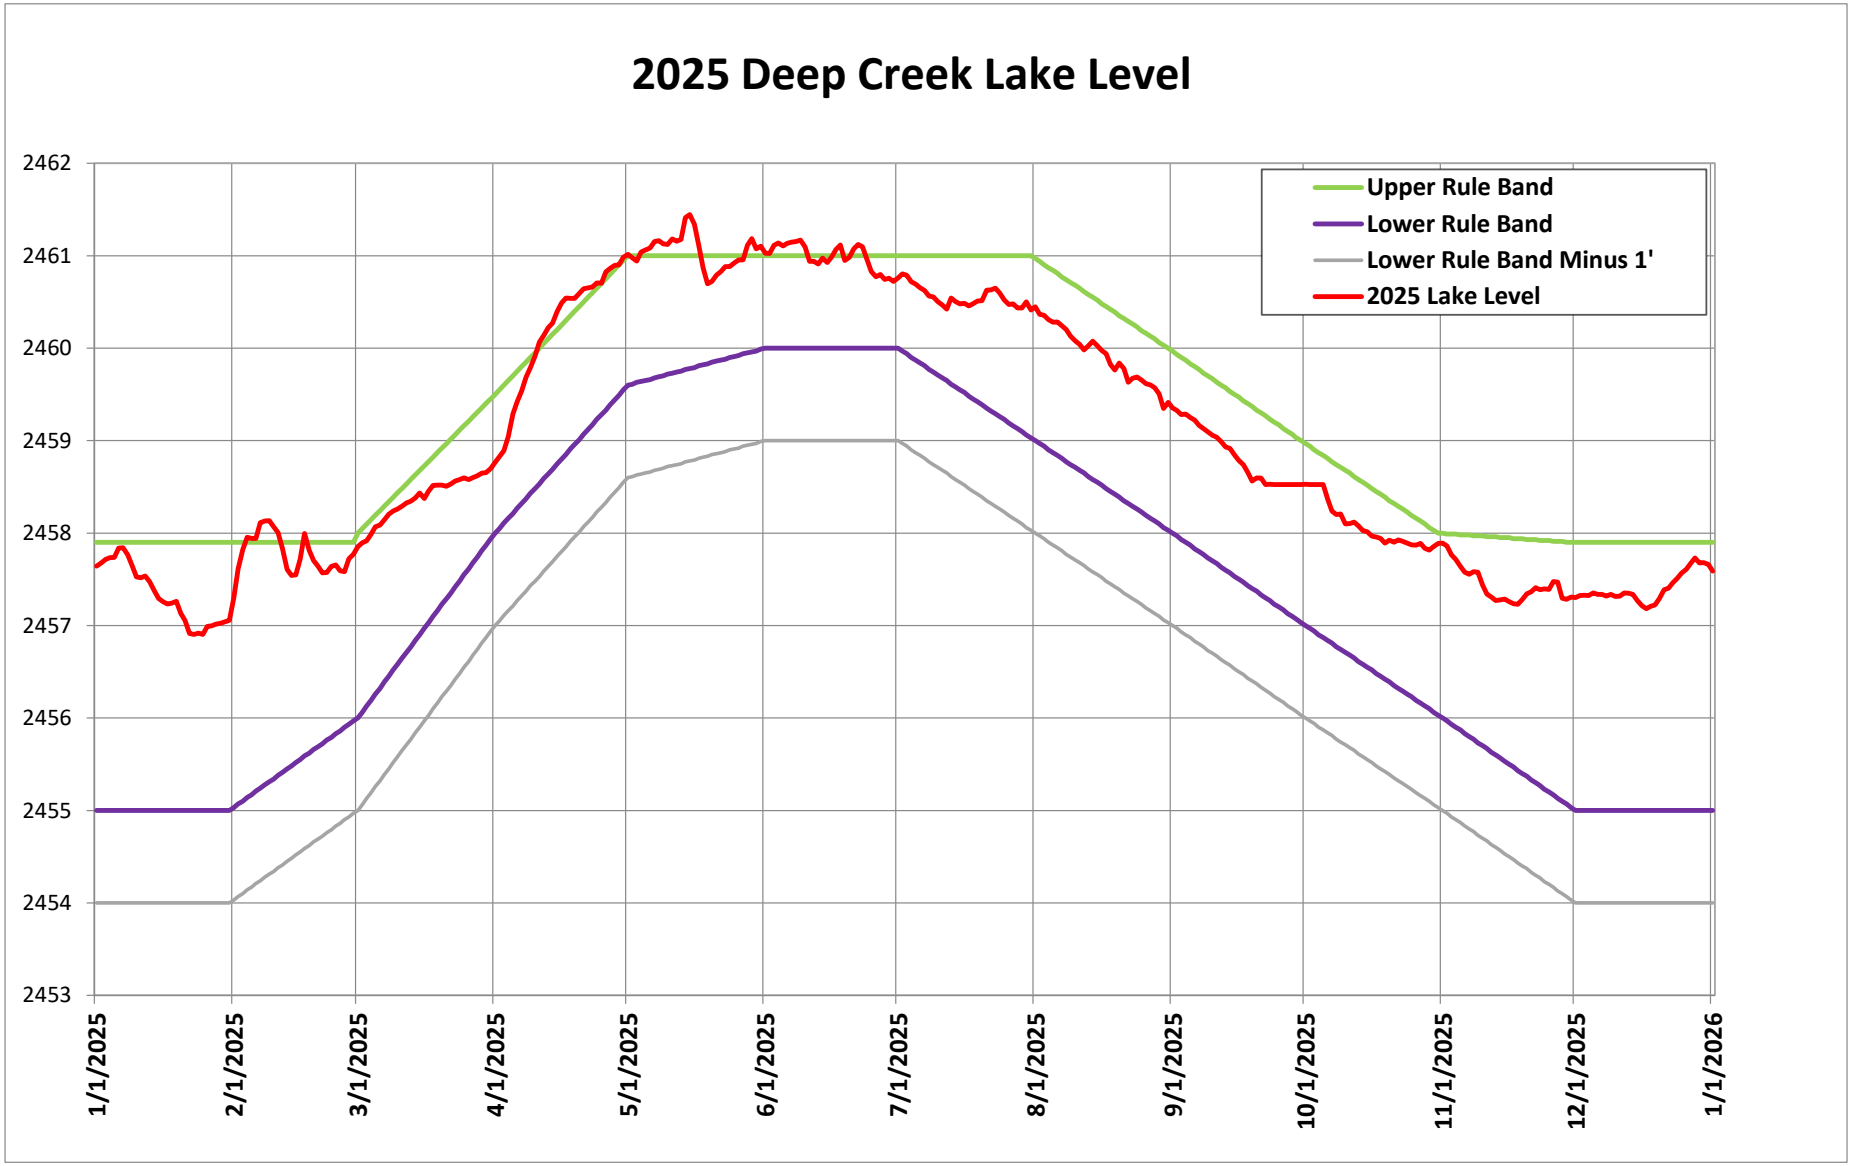

There were no conditions unsuitable for whitewater recreation releases during 2025. Due to lack of rainfall and subsequent low lake levels, 18 whitewater events were not able to be held in 2024. Brookfield communicated regularly with MDE and the whitewater boaters and made decisions daily based on lake levels.

1.6 Zebra Mussel Monitoring

Artificial substrates placed at the Project intake area during 2025 showed no signs of zebra mussels. Appendix E contains the Zebra Mussel Monitoring Report data sheets.

APPENDIX B

- Summary of Temperature Excursions
- Temperature in the Youghiogheny River at Sang Run Bridge
- Temperature Enhancement Plan Daily Log Sheets

Summary of Temperature Excursions

June 1, 2025 to June 30, 2025

Date	Time	Duration	Max Temp °C	Cause	Remarks
6/29/2025	1955 to 2230	2 Hours, 35 Minutes	25.38	231 CFS - TER Not Required	No Call for Release - Flow > 180 CFS

Summary of Temperature Excursions

July 1, 2025 to July 31, 2025

Date	Time	Duration	Max Temp °C	Cause	Remarks
7/8/2025	1735 to1740	5 Minutes	25.02	Model Probability	Ran TER from 1130 to 1330
7/22/2025	2025 to 2105	40 Minutes	25.11	Model Probability	Ran TER from 1530 to 1630
7/28/2025	2245 to 2305	20 Minutes	25.06	415 CFS - TER Not Required	No Call for Release - Flow > 180 CFS
7/30/2025	1705 to 1740	35 Minutes	25.38	Model Probablity	Ran TER from 1130 to 1330
	2300 to 2400	1 Hour	25.38		
7/31/2025	0000 to 0105	1 Hours, 5 Minutes	25.36	Model Probablity	Ran TER from 1130 to 1330

Summary of Temperature Excursions

August 1, 2025 to August 31, 2025

Date	Time	Duration	Max Temp °C	Cause	Remarks
8/3/2025	2040 to 2240	2 Hours	25.33	Model Probability	No Call for Release
8/5/2025	2030 to 2245	2 Hours, 15 Minutes	25.38	Model Probability	No Call for Release
8/14/2025	1900 to 2040	1 hour, 40 Minutes	25.72	Model Probability	Ran TER from 1430 to 1530
8/21/2025	2015 to 2300	2 Hours, 45 Minutes	25.43	Model Probablity	No Call for Release
8/24/2025	1910 to 2055	1 Hours, 45 Minutes	25.99	Model Probablity	Ran TER from 1420 to 1520

Summary of Temperature Excursions

September 1, 2025 to September 15, 2025

Date	Time	Duration	Max Temp °C	Cause	Remarks
There were no temperature excursions in September
