Annual Report on Testing for Lead in Drinking Water for Maryland Public and Nonpublic Schools

Fiscal Year 2025

Submitted jointly by the Maryland Department of the Environment and the Maryland Department of Education

Submitted December 30, 2025 (*Revised March 2026*)

Prepared for:
Bill Ferguson, Senate President
Maryland General Assembly

Adrienne A. Jones, House Speaker
Maryland General Assembly

Wes Moore
Governor

Aruna Miller
Lieutenant Governor

Serena McIlwain
Secretary

Suzanne Dorsey
Deputy Secretary

Adam Ortiz
Deputy Secretary

Background and Findings

House Bill (HB) 270 (2017) established a framework to reduce Maryland school children's exposure to lead in drinking water. HB 270 directed the Maryland Department of the Environment (MDE), in consultation with the Maryland State Department of Education (MSDE), Maryland Department of General Services (DGS), and Maryland Occupational Safety and Health (MOSH), to adopt regulations to require periodic testing for the presence of lead in each drinking water outlet located in an occupied public or nonpublic school building. The law required MDE to establish a stakeholder group and to gather information about the testing processes, protocols, and efforts undertaken by schools to test for and remediate lead. The law also required MDE, in consultation with MSDE, to provide a mechanism to grant waivers from testing to schools under certain circumstances. Furthermore, on or before Dec. 1, 2018, and each year thereafter, MDE and MSDE must jointly report to the Governor and the Maryland General Assembly on the findings of the lead testing conducted by schools.

The legislation defines an elevated level of lead as a lead concentration in drinking water that exceeds the standard recommended by the U.S. Environmental Protection Agency (EPA) in the most recent technical guidance (*3Ts for Reducing Lead in Drinking Water in Schools*). The Action Level for lead in the EPA's technical guidance, effective at the time, was 20 parts per billion (ppb).

HB 1253 (2019) strengthened the lead protection measures established in HB 270 by setting a lead level of no more than 5 ppb as a goal for schools. The law also provided a funding mechanism for schools to remediate drinking water outlets that exceeded this level and expanded the information that must be reported to the Governor and the Maryland General Assembly.

HB 636 (2021) further reinforced the lead protection measures established in both HB 270 and HB 1253 by altering the definition of an elevated level of lead from 20 to 5 ppb (effective June 1, 2021, and applied retroactively). This change significantly increased the number of drinking water outlets that were required to be removed from service immediately and remediated. In addition, the new law set a deadline of Aug. 1, 2022, for schools to complete remediation of drinking water outlets that had lead levels between 5 and 20 ppb if the samples were analyzed by a state-certified laboratory by June 1, 2021.

Maryland regulations establish a three-year testing frequency for all schools. This report, which will be made available to Maryland citizens through MDE's website, provides information on the results of validated lead samples collected from drinking water outlets in schools during the annual reporting cycle ending July 1, 2025, including:

(1) The name and address of each school that has tested its drinking water for lead and reported the test results to the state during the reporting period (Table 1);
(2) The name and address of each school found to have elevated levels of lead in its drinking water (Table 2); and

(3) The type, location in the building, and use of each water outlet with an elevated level of lead (Table 2).

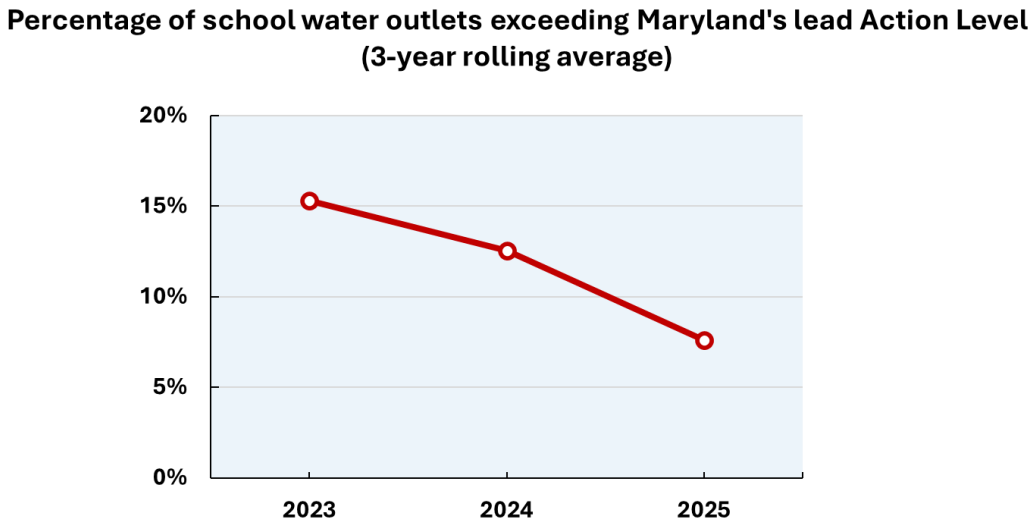
This report also includes results from validated lead sampling during previous reporting cycles (i.e., July 2, 2017, through July 1, 2024) that were not included in previous reports (Tables 3 and 4).

Approximately 460 schools submitted results of lead samples collected during the current reporting period (July 2, 2024, through July 1, 2025). Of these schools, MDE was able to review results from 296 schools (223 public schools, 7 charter schools, and 66 nonpublic schools) and determine that 294 schools (222 public schools, 7 charter schools, and 65 nonpublic schools) reviewed have one or more valid samples (i.e., collected and analyzed in accordance with Code of Maryland Regulations (COMAR) 26.16.07.07). Review of the remaining schools' results is ongoing. Proper sample collection, recordkeeping, and reporting at the schools, laboratory analysis, and data review by MDE, are labor-intensive and time-consuming processes, and data received by MDE is often incomplete or contains errors. Due both to the quality and completeness of data received as well as the exacting nature of its review, MDE was only able to review and report on approximately two-third of the schools submitting lead sample results during this reporting period by the statutory deadline. Additional review of data will continue throughout the year and will be presented in future reports.

Ensuring rigorous quality control while also conducting data review in a timely manner constitutes a significant challenge for the ongoing implementation of the effort to test for lead in drinking water in schools. In response, MDE is undertaking several initiatives to further improve the quality, integrity, and tracking of the sampling and reporting process. Using grant funds, awarded under Section 2107 of the Water Infrastructure Improvements for the Nation (WIIN) Act, MDE is currently developing a database and a mobile-capable sampling application to streamline sample collection and data tracking for drinking water outlets, and facilitate more rapid and accurate reporting from schools both to laboratories and MDE. As of the writing of this report, the development of the database and the sampling application is over 60 percent complete. Additionally, MDE is continually updating and refining its technical guidance, and has developed a series of training videos, which are available on MDE's website, and informational sessions (six in the Spring of 2025 and four in the Fall of 2025) on the training videos. These information technology innovations and technical assistance efforts will improve data quality and expedite the review process for MDE, reducing the likelihood of a growing backlog.

Of the 294 schools for which data was reviewed and samples determined to be valid by MDE in this reporting cycle, 46.6% (115 public schools, 2 charter schools, and 20 nonpublic schools) had one or more sample results exceeding Maryland's lead Action Level (AL) of 5 ppb. Of the 7,009 valid samples collected from these 294 schools, about 6.9% had lead levels exceeding 5 ppb. When outlets used for drinking, food preparation, or cooking are found to have elevated levels of lead in the water, schools are required to prevent access to these outlets within 24 hours.

Maryland's goal is to eliminate any occurrence of elevated levels of lead in drinking water provided to approximately 1 million children by the nearly 3,000 public and nonpublic schools in the state. The downward trend in the occurrences of elevated levels of lead in drinking water outlets in Maryland schools can be seen in the chart below.



The significant reduction in the AL from 20 ppb to 5 ppb, effective June 1, 2021, coupled with continued testing and remediation, further reduces exposure to lead in drinking water, and is an important step in achieving this goal. In addition, the remediation funding mechanism provided under HB 1253 further supports Maryland's goal to eliminate any occurrence of elevated lead levels in drinking water in schools.
